REDS! THE WORLD'S BEST—CORNISH QUALITY
Owner of Chicago King. Breeders, eggs, exhibition, both combs
EDWIN R. CORNISH, - - - - - EDWARDSBURG, MICHIGAN

Where You Can Make big Profits Raising Poultry

**5 ACRES
\$100**

Excellent land for this purpose in one of the most desirable locations in the country. ❀ ❀ ❀

**\$5 Down
\$5 Monthly**

Poultry raising is profitable in Southern New Jersey near Atlantic City

Because the soil is clean and free from smearing mud.

Because the climate is mild and healthful, and conducive to winter laying and early broilers.

Because of nearness to several of the best markets of the world.

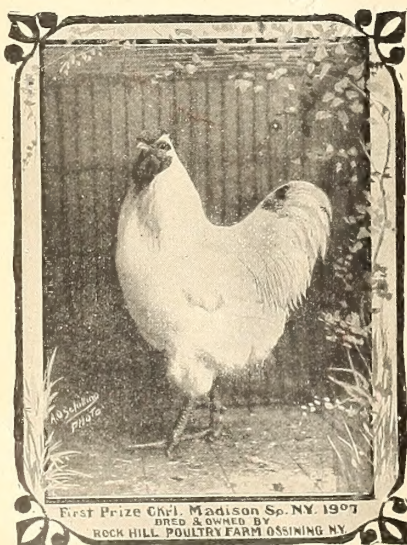

Because of unexcelled transportation facilities.

THIS DESIRABLE LAND

is only 17 miles from Atlantic City, near three main line railroads and two manufacturing towns. Good roads and excellent shipping facilities to New York and Philadelphia. Advantages of resort patronage that pays fancy prices. Title insured. White persons only. For full particulars and handsome, illustrated booklet, write at once to

DANIEL FRAZIER CO.,

691 Bailey Bldg., Philadelphia, Pa.

FOR SALE

SEVERAL hundred of early hatched Rocks, Wyandottes and Leghorns, bred from Madison Square Garden winners, that will be in fine condition for the fall shows. **QUALITY UNEXCELLED.** Also a large number of our tested breeding birds at prices that will attract you. Send for catalogue and write your wants.

ROCK HILL POULTRY FARM
F. W. COREY, Manager OSSINING, NEW YORK

GOLDEN AND COLUMBIAN WYANDOTTES

J. H. McDANELL, R. R. 2, WARSAW, KY.

If you are looking for show birds I have them and will sell the winners. One thousand farm raised. Winners at World's Fair, Chicago, Hagerstown, Jamestown, Buffalo, New York, and others.

World's Foremost White Wyandottes

Have won the very highest honors at N. Y., World's Fair, Boston and other leading shows; have sold winners for all the prominent shows in U. S. and Canada; many owe their success to my strain. 15 years line bred for vigor as well as fancy points. REMEMBER, all stock returned at my expense if not satisfactory. I have some grand early birds. I am breeding Columbian Wyandottes on same lines as the White Wyandottes.

Diseases of Poultry

—BY—

D. E. SALMON, D. V. M.

Chief of the United States Bureau of Animal Industry

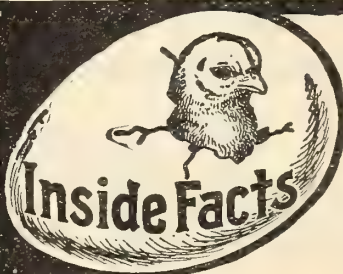

Every poultryman should have this book in their poultry library. It contains 250 pages, and every disease to which fowls are subject is treated in a most thorough manner. The cause, symptoms and cure of each disease is put before the reader in such a manner as to be understood at a glance. With this book in hand you can be your own poultry doctor. Better order one now and not wait until your fowls become ill.

THE PRICE IS ONLY FIFTY CENTS

Will send this book and American Poultry Journal one year for only 75 cents. Send all orders to

American Poultry Journal Pub. Co.

113 South Clinton Street : : Chicago, Illinois

Farm-Poultry

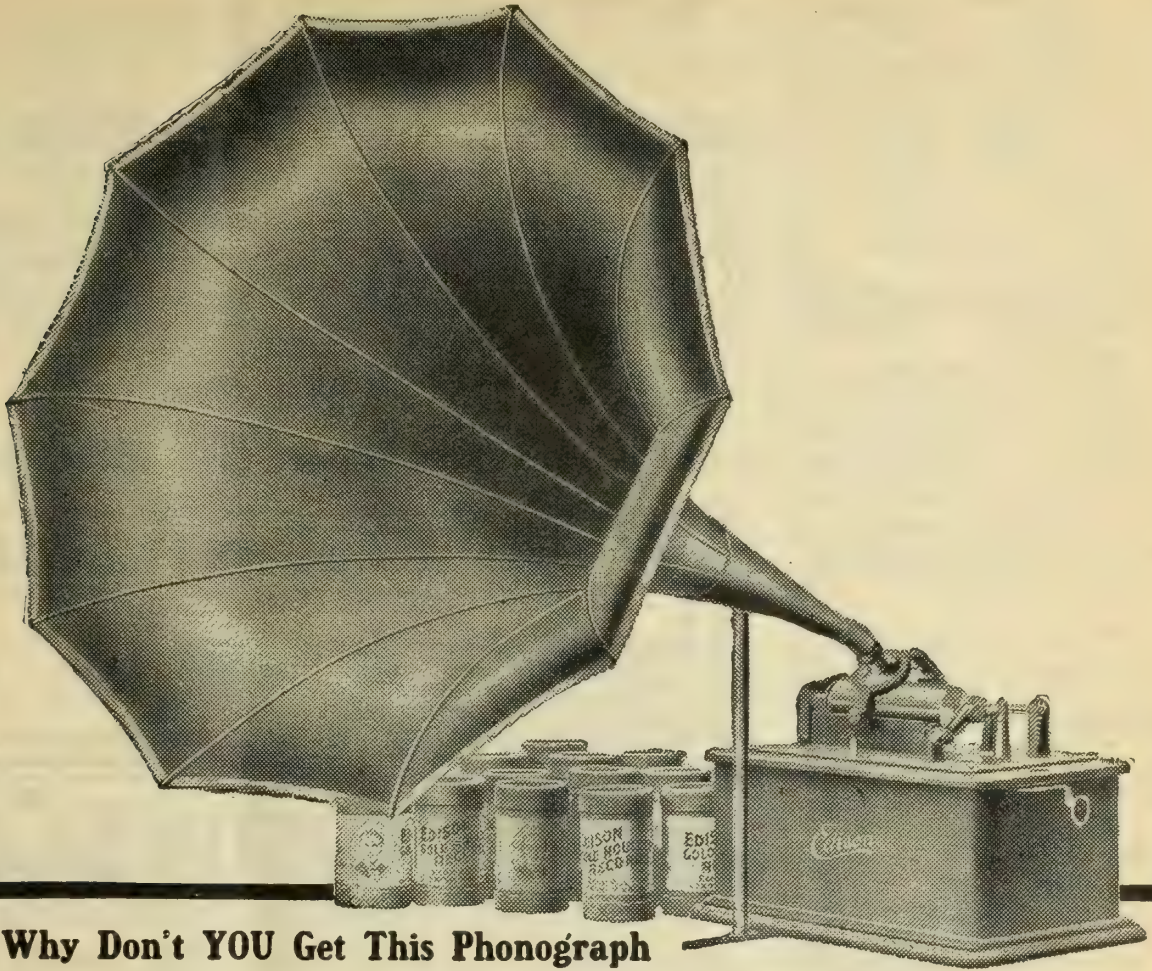

gives you the inside facts—and the outside ones also for that matter—without fear or favor, whether they relate to the American Poultry Association or a sixth prize won by an unknown breeder at a small show. Some papers mention only the winnings of their advertisers. This may be right—from their point of view—but we have always felt that FARM-POULTRY readers were entitled to

ALL the news. FARM-POULTRY also gives, and has for the past 19 years, everything that is sane—authoritative—dependable—about Incubating, Brooding, Rearing, Feeding, Mating, Housing, Exhibiting, Killing, Dressing and Marketing of poultry. FARM-POULTRY is 50 cts. per year but we make a special offer of

Farm-Poultry (Monthly) one year } Both for
American Poultry Journal (Monthly) one year } 65 cts.
Price to Canada 90 Cents.

Another splendid proposition—in fact one of the greatest combinations of reliable poultry literature we ever offered is the two above mentioned papers one full year, and two 160 page works on poultry keeping that retail for 50 cts. each, books that have been accepted as text books by the leading Agricultural Colleges and Experiment Stations, ALL FOUR FOR ONLY \$1.50. Price to Canada \$1.75. If you're not satisfied with your bargain, return the books to us in good order and your money will be on its way back within an hour after their receipt. But all orders and remittances on above offers MUST be sent to

FARM-POULTRY PUB. CO., Boston, Mass.

Why Don't YOU Get This Phonograph

On **FREE TRIAL?**

For almost three years I have been making the most liberal phonograph offer ever known! I have given hosts of people the opportunity of hearing the genuine Edison Phonograph right in their own homes without charging them a single penny. So far you have missed all this. Why? Possibly you don't quite understand my offer yet. Listen—

MY OFFER:

I will send you this Genuine Edison Standard Outfit (the newest model), complete with one dozen Edison Gold Moulded Records, for an absolutely free trial. I don't ask any money down or in advance. There are no C. O. D. shipments; no leases or mortgages on the outfit; no papers of any sort to sign. Absolutely nothing but a plain out-and-out offer to ship you this Phonograph together with a dozen records of your own selection on a free trial so that you can hear it and play it in your own home. I can't make this offer any plainer, any clearer, any better than it is. There is no catch about it anywhere. If you will stop and think just a moment, you will realize that the high standing of this concern would absolutely prohibit anything except a straightforward offer.

WHY I WANT to Lend You this Phonograph:

I know that there are thousands and thousands of people who have never heard the Genuine Edison Phonograph. I can't tell you one twentieth of the wonders of the Edison, nothing I can say or write will make you actually hear the grand full beauty of its tones. No words can begin to describe the tender, delicate sweetness with which the genuine new style Edison reproduces the soft, pleading notes of the flute, or the thunderous, crashing harmony of a full brass band selection. And you can get the records in any language you wish. The only way to make you actually realize these things for yourself is to loan you a Genuine Edison Phonograph free and let you try it.

Our Easy Payment Plan.

I have decided on an easy payment plan that gives you absolute use of the phonograph while paying for it. \$2.00 a month pays for an outfit. There is absolutely no lease or mortgage of any kind, guarantee from a third party, no going before a notary public, and the payments are so very small and our terms so liberal that you never notice the payments.

If You Want to Keep It

that is, if you wish to make the Phonograph your own, you may do so, but it is not compulsory. I am asking you merely to send for a free demonstration.

Thomas A. Edison

F. K. BABSON, Edison Phon. Distrib'rs, Edison Block, Dept. 329, CHICAGO

You Don't Have to Buy It: All I ask you to do is to invite as many as possible of your friends to hear this wonderful new style Edison. You will want to do that anyway because you will be giving them genuine pleasure. I feel absolutely certain that there will be at least one and probably more who will want an Edison of their own. If they don't, if not a single one of them orders a Phonograph (and this sometimes happens) I won't blame you in the slightest. I shall feel that you have done your part when you have given these free concerts. You won't be asked to act as our agent or even assist in the sale of a single instrument.

Get the Latest Edison Catalogs.

Just sign your name and address on the attached coupon now and mail it to us. I will send you our superbly illustrated Edison Phonograph Catalog, the very latest list of Edison Gold Moulded Records (over 1,500 of them in all languages) and our Free Trial Certificate entitling you to this grand offer. Sign the coupon now, get these catalogs and select your records at once. Remember the free concerts. Sign the coupon right now.

Petersen's Houdans

Reign Supreme at the Nation's Greatest Shows

My record has never been approached by any breeder.
BOSTON, 1900. In world famous competition, 135 Houdans exhibited. I won 1st cock, 1st and 2d pullet.
BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.
BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.
BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, Club Cup for best cock, hen, cockerel and pullet. \$100 champion challenge cup for best male; American Houdan the superiority of Petersen's strain of Houdans and defies competition. Such records prove
BOSTON, 1906. Judged the Houdan Exhibit.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdans. Also highest honors at Madison Square Garden, Philadelphia, Pan-American, Hagerstown, Toronto. No matter where you want to exhibit, no matter what the competition, I can furnish the winners. We do not exhibit at state fairs and smaller shows, nor enter into competition with our customers. Write for particulars.

How to Save Money on your Poultry Literature for '09
Three of the Best Poultry Publications, Practically Supplying the Entire
Needs of a Poultryman, Furnished for One-Half the Regular Price

Our Big "3" Combination

American Poultry Journal
Western Poultry Journal
Farm-Poultry

ALL THREE FOR
75 Cents
Regular Price, \$1.50

Farm-Poultry, published at Boston, Mass., is one of the oldest and best poultry magazines published in the East, and is now in its 19th volume. This magazine is always full of valuable information pertaining to thoroughbred poultry, and covers the Eastern field in a most thorough manner.

Western Poultry Journal, published at Cedar Rapids, Iowa, is also in its 19th volume, and is one of the most up-to-date poultry magazines published in the West. The two, together with the old reliable American Poultry Journal, now in its 39th volume, thoroughly covers the entire field of poultry literature, and make a poultry library in themselves.

This is the greatest Combination Ever Offered by a Poultry Paper

and especially so when you take into consideration the fact that American Poultry Journal will, during the coming season, publish five more of those handsome colored plates of poultry, any one of which is worth the price of a year's subscription to any one interested in thoroughbred fowls.

This offer is for both new and renewal subscriptions. Cut out the coupon and send in your order today. Address all orders to

FOY'S BIG BOOK

MONEY IN POULTRY
AND SQUABS

Describes and illustrates all the leading varieties of pure bred fowls and Homer Pigeons for squab raising. Tells you all about how to raise poultry for profit, how to feed and mate, all about diseases and remedies, and a great mass of useful information. Gives plans for building poultry houses, describes and illustrates the best incubators and brooders and the famous Crescent Poultry Farm, which is the largest poultry farm in this country devoted exclusively to the rearing of pure bred poultry and pigeons. Important Advice—Tells you how to start the business in a small way and grow big. My specialties are thoroughbred fowls of a high quality, and Homer Pigeons for raising squabs. I can supply eggs for hatching from all leading varieties by the single setting or in large lots for incubators. My prices are low. The quality is high. All who want to keep posted in the poultry business, or contemplate purchasing anything in the above line, should send for this book. Mailed to any address for 4 cents in stamps. Write your wants and mention American Poultry Journal.

OUR NEW POULTRY BOOK

ORIGIN AND HISTORY OF ALL BREEDS OF POULTRY

This Book Gives a Complete History and the Origin of all the Recognized Varieties of Chickens, Ducks, Geese and Turkeys, and is

Illustrated With 198 Colored Pictures of Fowls Painted From Life

SOMETHING NEVER BEFORE ATTEMPTED BY ANY PUBLISHER

This is without question the greatest book ever published on poultry, and has been in course of preparation for the past three years. The artists' work alone on this book took almost one year's time to complete, but it shows the fowls in their natural colors and correct shapes, and these colored pictures, together with the history of each variety, gives the fancier all the information necessary to produce fowls for either exhibition or breeding.

This book also tells how to mate the different varieties for best results. It is a book that the fanciers of this country have been in need of for years; a book that is just as suitable for the needs of the experienced fancier as for the amateur.

INTRODUCTORY PRICE, \$1.00

INSURABLE INCUBATORS

LOOK FOR INCUBATOR LABEL

LAST MONTH

AND THE MONTH BEFORE we told the readers of this paper about the action of the **NATIONAL BOARD OF FIRE UNDERWRITERS** in adopting "RULES AND REQUIREMENTS" governing the construction of **INSURABLE INCUBATORS AND BROODERS**, and announced that **EVERY 1909 CYPHERS INCUBATOR** will bear an "Inspected Incubator" label and **EVERY CYPHERS 1909 STYLE BROODER** an "Inspected Brooder" label, **PLACED THEREON UNDER THE DIRECTION OF THE NATIONAL BOARD OF FIRE UNDERWRITERS**. We also published the fact that the **NATIONAL BOARD OF FIRE UNDERWRITERS REPRESENTS PRACTICALLY EVERY OLD-LINE FIRE INSURANCE COMPANY DOING BUSINESS IN THE UNITED STATES AND CANADA.**

JUST WHAT IT MEANS:

INTENDING PURCHASERS of incubators and brooders may well ask themselves this question:—IN VIEW OF EXISTING CONDITIONS IN THE FIRE INSURANCE WORLD, WHAT MUST BE THE LOGICAL RESULT OF THIS ACTION ON THE PART OF THE ASSOCIATED FIRE INSURANCE COMPANIES, AS AFFECTING THE DIFFERENT MAKES OF INCUBATORS AND BROODERS NOW ON THE MARKET?

THE ANSWER IS NOT FAR TO SEEK!

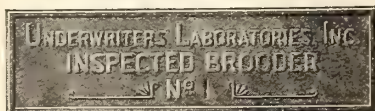

EXISTING CONDITIONS taken in connection with the **RECENT ACTION** of the

National Board of Fire Underwriters in adopting carefully formulated "Rules and Requirements" GOVERNING THE CONSTRUCTION AND USE OF **INSURABLE INCUBATORS AND BROODERS** means simply this: THAT INCUBATORS AND BROODERS,

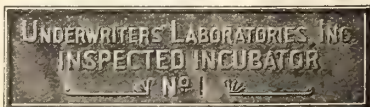

IN ORDER TO BE INSURABLE, MUST CONFORM to the "Rules and Requirements" of the National Board of Fire Underwriters, as recommended by its Committee of Consulting Engineers, and that **PROPERTY OWNERS WHO BUY INCUBATORS OR BROODERS WHICH DO NOT CONFORM** to said rules **CANNOT OBTAIN** or **CANNOT AFFORD** fire insurance on buildings in which they are used, and the **SAME IS TRUE** of buildings and the contents thereof THAT ARE EXPOSED BY THE USE OF SUCH INCUBATORS AND BROODERS IN CLOSE PROXIMITY THERETO.

AVOID THIS MISTAKE:

REGARDLESS OF THE UNFAVORABLE POSITION in which many manufacturers now find themselves—temporarily at least—the **UNDENIABLE FACT** IS that the **IDENTICAL** incubators and brooders THEY ARE NOW OFFERING FOR SALE will be **TAKEN OFF THE MARKET** within the next year or so BY THE MANUFACTURERS THEMSELVES, because it is certain that AS SOON AS THEY ARE ABLE TO DO IT, they will **RECONSTRUCT AND FIRE-PROOF** their makes of incubators and brooders, IN COMPLIANCE with "Rules and Requirements" of Associated Fire Insurance Companies. **POSITIVELY** THEY WILL HAVE TO DO THIS IF THEIR CUSTOMERS ARE TO BE PLACED IN A POSITION WHERE THEY CAN OBTAIN OR CAN AFFORD FIRE INSURANCE—and anyone who neglects these days to **INSURE HIS PROPERTY** in some reliable company is taking greater chances of loss THAN A PRUDENT PERSON IS WILLING TO TAKE. CLEARLY, THEREFORE, it will be a mistake to buy THIS SEASON a type or make of incubator which NEXT SEASON will be both **UNINSURABLE** and out of date—MADE SO BY THE MANUFACTURER HIMSELF.

Form of Brass Label to be found (in Serial Numbers) on every 1909 Standard Cyphers Incubator, all Sizes.

Form of Brass Label to be found (in Serial Numbers) on every 1909 Brooder of Cyphers Company's Manufacture.

General View of Standard Cyphers Incubator, 1909-Pattern. Equipped with Fire-Proof Heater, Fire-Proof Lamp and Fire-Proof Lamp Enclosure

BRANCH HOUSES (23 Barclay St., New York City; 72 Lake St., Chicago; 26 Union St., Boston; 2325 Broadway, Kansas City, Mo.; 1569 Broadway, Oakland, Cal.; 117 Finsbury Pavement, London, England.

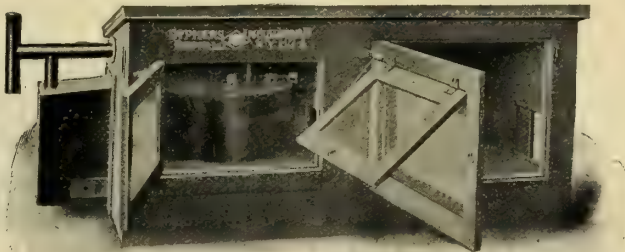

INSURABLE BROODERS

BROODER FACTS: THE RULES ADOPTED BY THE NATIONAL BOARD OF FIRE UNDERWRITERS, governing the construction of oil-heated brooding devices that can be used IN OR NEAR INSURED PROPERTY are only **FOUR IN NUMBER**, but their enforcement **RENDERS UNINSURABLE** every make and type of lamp-heated brooder that was on the market AT THE TIME OF THEIR ADOPTION. Cyphers Incubator Company was not taken unawares in this important matter. **FOUR YEARS AGO** it built and tested oil-heated brooders made of **NON-COMBUSTIBLE MATERIALS** and since then it has continued its experiments each season with the fixed idea of perfecting a line of **TOP-HEAT, SELF-VENTILATING AND SELF-REGULATING** lamp-heated brooders for indoor and outdoor use that would be **SAFE FROM THE DANGER OF FIRE.**

OTHER MANUFACTURERS

of **Oil-Heated Brooders** did not heed the repeated warnings! The result is that on this date, January 1, 1909, **THE ONLY INSURABLE, LAMP-HEATED BROODING DEVICES IN EXISTENCE** are those built by Cyphers Incubator Company which bear the "Inspected Brooder" labels of the Fire Insurance Underwriters. Not only is every Cyphers Company Brooder for 1909 **BUILT IN STRICT CONFORMITY** with the Fire Underwriters' "Rules and Requirements," but **EACH BROODER IS SEPARATELY INSPECTED** and labeled, **IN OUR FACTORY**, by the fire insurance engineers, **UNDER THE DIRECTION OF THE NATIONAL BOARD OF FIRE UNDERWRITERS**, before it is crated for shipment.

CYPHERS STYLE B 1909 BROODER

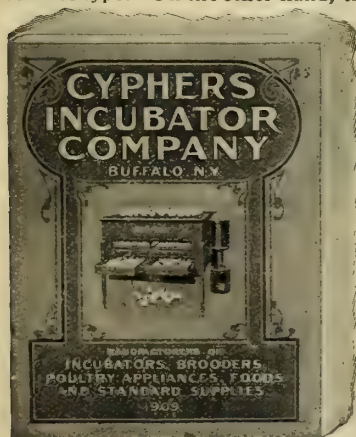

(Formerly known as Style A)

FIRE-PROOFED, INSURABLE, SELF-VENTILATING AND SELF-REGULATING.

Three-Apartment, Combination Outdoor Brooder and Colony Roosting Coop. Note substantial and convenient construction. Built throughout of 7-8-inch lumber. Large double doors for easy cleaning. Single-pane 12x18 inch windows. Equipped with Cyphers Fire-Proof Heater and Standard Adaptable Hover, which bears "Inspected Brooder" Label of the National Board of Fire Underwriters.

VALUE REDUCED FULLY ONE-HALF: **THIS COMPANY REALIZED** at once that its full line of brooders **MUST BE INSURABLE**, otherwise

their usefulness and value would be **reduced fully one-half.** It was very evident that **INDOOR BROODERS** must be of an **INSURABLE** type. On the other hand, the poultry keeper, **AT ONE TIME OR ANOTHER**, will be sure to want to use his **Outdoor Brooder or Brooders IN OR NEAR VALUABLE BUILDINGS.** At certain seasons of the year it may suit him to locate these devices in a field or an orchard far removed from his residence and other buildings, but early in each season he will find it **BOTH PROFITABLE AND CONVENIENT** to operate them **EITHER INDOORS** or in a sheltered position **NEAR SOME BUILDING**, yet the fire insurance companies prescribe that a **NON-INSURABLE BROODING DEVICE** shall not be used **INSIDE** an insured building **OR AT ANY POINT WHERE IT WILL INCREASE THE HAZARD OF INSURED PROPERTY.**

NOW READY FOR MAILING

Free on request. Contains 212 pages, 8x11 in.
Chock full of interest.

AT THE PRESENT TIME THERE ARE TWO KINDS OF INCUBATORS AND BROODERS ON THE AMERICAN MARKET, the kind that are built in conformity with the "Rules and Requirements" of the National Board of Fire Underwriters, AND THE KIND THAT ARE NOT. Those that ARE BUILT in conformity with said "Rules and Requirements" bear the inspection labels of the Underwriters Laboratories (Inc.); the **OTHERS DO NOT.** Possibly a **NON-INSURABLE** outdoor brooder may be worth fifty cents on the dollar, AS COMPARED WITH THE **INSURABLE** KIND, but it is self-evident that a **NON-INSURABLE INCUBATOR** is practically useless IN THE HANDS OF ANY ONE WHO DESIRES TO CARRY FIRE INSURANCE ON PROPERTY THAT WOULD BE ENDANGERED BY ITS USE.

BARROW'S WHITE LEGHORNS

Are birds of superior quality. 1st, because they are bred for the largest possible number of large, pure, white market eggs. 2d, because they are Standard bred and are winning at the leading large shows including Madison Square Garden. 3d, because they are large size and please our customers. Stock for sale, both old and young, for utility or exhibition purposes.

The Maples Poultry Farm, Geo. A. Barrows, Prop., Box 500, Groton, N. Y.

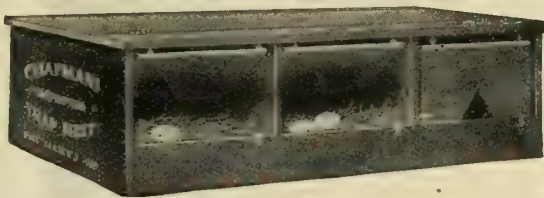

Martin's White Wyandottes

At the New York State Fair, Syracuse, N. Y., Sept. 14 to 18, 1908, simply out classed all their rivals and made the most magnificent winning ever recorded in the annals of White Wyandotte history, viz.: Cocks, 1, 2, 3, 4, 5; hens, 1, 2, 3, 4, 5; cockerels, 1, 2, 3, 4, 5; pullets, 1, 2, 3, 4, 5; pens (old), 1, 2, 3; pens (young), 1, 2, 3; Hodgkin's silver cup for best display. My exhibit of 50 snow white birds, all showing that blocky shape characteristic of the Regal strain, was the most attractive display in the show. Judges Denny, Schwab and Gardner, pronounced my first prize hen as being years in advance of the Standard. Free—send for catalogue giving prices of stock and telling all about the Regal Strain.

It will save money by telling just the kind of house desired for the different localities and the size best suited for the various sized flocks.

Price is only 50 cents

Will send this valuable book and American Poultry Journal one year for 75 cents. Send all orders to

AMERICAN POULTRY JOURNAL PUB. CO., 113 So. Clinton St., Chicago

THE POTTER SYSTEM

Of selecting laying and non-laying hens and more profitable poultry raising is recognized as the greatest discovery of the century in the line of getting greater egg production and making more money in poultry keeping

Many poultry keepers write us and say that the Potter System is worth \$100 to them because it saves them dollars in feed bills and tells them how to pick the layers from the loafers, and to keep only laying hens. Thousands of poultry raisers now use the Potter System and make more money on their hens. The letters to the right are samples of the many we constantly receive from users of the Potter System.

You won't kill hens in full laying condition like this one when you know the Potter System.

You can have \$2 profit and not \$1 loss on every hen you keep and know

- How to breed only laying hens!
- How to select your laying hens!
- How not to kill your laying hens!
- How to mate your birds for best layers!
- How to save feed and labor and money!
- How to keep the layers and kill the non-layers!
- How to tell the drones and barren hens!
- How to select the best laying pullets!
- How to stimulate the hen's laying organs!
- How to estimate the number of eggs a hen will lay in a week or a month!
- How to keep fewer hens and make more money!

The Potter System

teaches you all this. It is the greatest discovery of the century in the poultry world. It is used now by over 20,000 poultry keepers, and you are losing money every day you delay in learning it. Write us today and learn how to get this dollar saving and dollar making booklet FREE.

SAVED TWENTY-FOUR EGGS

Dear Sirs:—I received your booklet, "Don't Kill the Laying Hen." It is so simple and yet so great. Just to illustrate what happened a few days after I got the book: A boy hit one of my hens with a slingshot and broke its leg. I was going to take the hatchet but I examined her and found her in first-class laying condition. I bandaged her leg up and put her in a coop and she laid an egg every day for two weeks, and then two eggs in three days, etc. The leg got well again and I still have the hen. Not knowing your system I would have killed the hen and been out all those eggs. Yours truly, Richard Kordael, Correctionville, Iowa.

SAVED DOLLARS

Gentlemen:—Your letters and papers received and I can say the system of selecting hens has given me knowledge that certainly is all right. I have made and saved dollars since last writing to you. Your system is all you claim for it. I shall use it as long as I am in the poultry business. I do not need any fixtures for my poultry house right away, but you shall have my order when I do. Wishing you success, I am, Yours truly, Miss Olive Flint, Ridgefield, Conn.

WORTH TEN TIMES ITS COST

Kind Friends:—Replying to yours of the 11th, I have the booklet on selecting the laying hens, and it is all you claim for it. I am proud of it and wouldn't take ten times what it cost if I could not get another one. Wishing you a prosperous year, I remain, Yours truly, Rufus Hart, Hartford City, Ind.

A SIMPLE METHOD

Dear Sirs:—I received your booklet, "Don't Kill the Laying Hen," about a month ago and have given it a practical test. It is a great thing and I don't see how I got along without it. Last week I sold 20 hens and am now getting as many eggs as I was before I sold them. The method was so simple that I had no difficulty in selecting the hens that were not laying. Yours truly, Norris Phillips, Ellicottville, New York.

RELIABLE IN EVERY WAY

Gentlemen:—Last year I received your valuable booklet, "Don't Kill the Laying Hen." For over six months I have given it a thorough test and found your system reliable in every way. My hens are now all laying hens and my friends are greatly surprised that I get so many eggs from so few hens. I remain, Yours truly, Louis Roedler, Bradford, Ont., Canada.

Complete, Convenient, Sanitary

That's what Potter Poultry House Fixtures are and that's why thousands of poultry keepers all over the country use them and are getting more paying results from their chickens. If you want to save time and labor in your poultry work, take more pleasure in it and have healthier hens, then decide to use our up-to-date fixtures. Our large 64-page catalog tells all about Potter Fixtures, V. E. Roosts, "Simplex" Trap Nests, W. P. Attachments, etc. Send for it and learn how easily and cheaply you can have neat, attractive and sanitary quarters for your fowls.

THE POTTER PERFECTION HOPPER is the best dry feed hopper made and at the right price. Made in three sizes, feeds both sides, has movable partitions for one or five feed compartments. It is the most sensible and satisfactory hopper and will save many times its cost in right feeding. Plans for sale, too. Circular on hopper feeding will be sent with catalog.

DON'T delay but write today for our large catalog and other circulars. Send one red stamp to cover postage.

POTTER Poultry Products are for Particular Poultry People. Are you particular? Then we have something that is bound to interest you and save you money.

T. F. POTTER & CO. :: Box A, Downers Grove, Illinois

White Plymouth Rocks

Are considered by everyone who has bred them to be the most beautiful and profitable fowl there is. In Japan, Australia, New Zealand, England, Alaska, South Africa, Java, China, Germany they have given excellent results as egg producers in all parts of the world. Why ponder over the matter what variety to buy when it has been proven that White Plymouth Rocks are the most beautiful and profitable.

U. R. FISHEL'S

White Plymouth Rocks have won more prizes at the largest exhibitions than any other breed, while as egg producers they have no equal. I have for sale this season the best lot of cockerels I have ever offered. Prices \$2, \$3, \$5 and \$10. Breeding pens of excellent quality. Utility Flocks, any number desired. Never forget the fact that U. R. Fishel's White Rocks are conceded everywhere to be

The BEST in the WORLD

Also remember no other breeder of this variety can give you the blood lines I can. Also remember our birds are strong, vigorous, farm reared stock, and they cost you no more money than poorly bred, small yard reared birds. Send Two Dimes for my 56 Page Catalog, the most elaborate and instructive poultry catalog ever issued. It is a household word that U. R. Fishel more than pleases his customers.

J. W. ANDREWS

Box A, DIGHTON, MASS.

Winter Eggs--How to Get Them

What is the reason that good feed and care will make cows give milk in winter, and yet why is it that good feed and care will not make chickens lay eggs? We know why and will be glad to tell you. We have a method of making chickens lay eggs in winter. If the old fowls are healthy and the pullets are old enough to lay eggs, we can do the trick within two weeks' time.

Our method is simple and cheap to use. There is no special equipment and expensive poultry house connected with it. A full explanation by us tells you why eggs are high in winter and low in warmer weather—tells you why setting hens are worth from \$1 to \$1.50 each early in March and April and are worth but twenty-five cents each late in June and July.

Let us explain to you how eating BODY LICE make fowls and chicks have colds, cholera, diarrhoea and roup. Our method of handling the poultry business produces instant results from the start. Is that not what you want? We can and will help you. Drop us a postal today.

SCHILD POULTRY SUPPLY CO.

:::

CLEVELAND, OHIO

Five Trips To Florida Free!

And you can take one! Yes, you can really go to sunny Florida and have every cent of your expenses paid. Or if you prefer, you can have a superb \$350 Harrington piano instead of the trip.

The five people who send us the most subscriptions in this contest between now and February 15, 1909, will be the lucky winners. No one has a better chance than you.

Just think of leaving the ice and snow behind and boarding "The Florida Limited" solid-vestibule Pullman train for Florida the first of next March. When you reach Florida flowers will be in bloom and you can pick all the oranges you want.

Among the splendid hotels our jolly party will stop at are the world-famous Ponce de Leon and the superb Cordova at St. Augustine.

A Prize for Every One

In addition to the five wonderful trips and the fine \$350 pianos, we offer one hundred magnificent Grand Prizes and many hundred other prizes for those who do not win a trip or a piano. We guarantee that absolutely every contestant will get a valuable prize and we pay you a liberal cash commission for every subscription besides.

Don't wait. Write to-day for further particulars and a fine set of Florida pictures—all free!

McClave's Barred Plymouth Rocks

Oldest Strain in Ohio. Bred on Linwood Farm since 1874. Choice cockerels, trios and pens at reasonable prices. I also breed best prize winning White and Golden Wyandottes, White and Brown Leghorns, Turkeys and Water Fowls. Largest poultry farm in Ohio.

CHAS. MCCLAVE - NEW LONDON, OHIO

Remember That WM. COOK & SONS

Are The
Originators Of All The
Orpington Fowls & Ducks

(Established 1873)

Remember we are by far the largest, oldest and most successful poultry breeders and exhibitors in the world.

Remember we are the Originators of all the famous Orpington fowls and ducks.
Remember we are Recognized Headquarters for the best Orpingtons of all varieties.
Remember by purchasing from us, you will save money.
Remember everything we sell is guaranteed to give satisfaction, also safe delivery, which is backed by a reputation of thirty-five years' standing.
Remember we do not charge fabulous prices for stock or eggs. Our Best Eggs, which are from the finest Orpingtons in the world, are only \$10 a setting, others from grand stock, \$5.
Remember all our show records stand absolutely unbeaten. Among them are 71 firsts and 58 seconds at five showings at Madison Square, more than five times as many as any other Orpington breeder.
Remember our birds have won for us over 10,000 first prizes, cups, medals and specials in nine different countries, and that more than three-quarters of the first prize winners of this country are either hatched from our eggs or sold by us.
Remember we ship sometimes in one day more birds to orders than some of the so-called large breeders have on their entire plant.
Remember we raise, keep and sell Orpingtons by the thousands.
Remember we have made the laying qualities of our fowls a specialty for over thirty-five years, and they are known the world over for their marvelous laying qualities.
Remember every order has Mr. P. A. Cook's personal attention.
Remember our aim is to see Cook Orpingtons in every poultry keeper's place. This is why we keep the price for our stock and eggs low, so as to be within reach of every one.
Remember we can ship imported or home bred stock at once. Advice free.
REMEMBER that COOK ORPINGTONS are the BEST, and if they carry that name it is a sure sign of quality, size, hardiness and extraordinary laying qualities. Ask the people who own them. Send for our Illustrated Catalogue. FREE.
Our Best Eggs of all varieties of the Orpingtons, which are from our winners and are the finest Orpingtons in the world are only \$10 a setting. Others from Grand Stock at \$5.

Your Name and Address That's All

OUR 1909 EDITION is the most practical text book on strawberry growing ever written. It's worth its weight in gold because it teaches the Kellogg method of growing the world's record crops of big red berries. Every detail of the work is illustrated by photo-engravings. You read it by pictures. They show you just how to do everything from beginning to end. Strawberry growers who follow the Kellogg way are getting more fancy berries from one acre than the other fellow gets from two. The book makes you acquainted with some of these top-notch growers; shows pictures of their strawberry fields and gives their yields. This Book for your address. We'll trade even.

R. M. KELLOGG COMPANY, Box 325, Three Rivers, Mich.

THE BANTA

The success of The Banta has been made through the success of the poultry raiser who bought it, and their success was made possible by the efficiency of the machine itself. "We got

103 Chicks from 120 Eggs

the first time. We think this is fine," writes M. C. George, Gentry, Ark.

The Banta Brooder is as good as The Banta Incubator and can be used outdoors without shelter with satisfaction. The Banta Brooder is necessary for the continuous growth of the chick. Keep them growing steadily and you are on the road to get the right kind of poultry profit. Bulletin No. 10 will help you. Catalog and Bulletin free. Write for it now.

THE BANTA-BENDER CO., Dept. 10, Ligonier, Ind.

WHITE WYANDOTTES Eggs Winners

Madison Square Garden, Boston, Jamestown Exposition, twelve regular and special prizes on twelve entries, 1906 and 1907, including first on hen at Madison Square in both 1906 and 1907. Do you know of a better record? Big, bouncing beauties any age or sex, to win or to breed. Write me today. Literature free.

CHAS. NIXON - - Box 202, WASHINGTON, N. J.

PLANE'S SINGLE COMB WHITE LEGHORNS

Score to 96½ under competent judges. If you need a cockerel to head that pen in the show room send to him. His cockerels are extra good shaped birds.

JOHN C. PLANE : : Belvidere, Illinois
Member of The National Single Comb White Leghorn Club

LICE INSURANCE!

Does it cost you more than fifteen cents a year to keep your chicken house entirely free from lice and mites? If it does, you are wasting money. It cost us less than seven cents a year for each pen, measuring 12 by 15 feet. This remedy is simple, effective and extremely cheap. One application per year is sufficient. Send two dimes today and we will tell you how to do it.

Don't forget the fact that we are the originators of the MORGAN STRAIN S. C. BUFF LEGHORNS, one of the best laying strains in existence today. Address, stating exactly your wants,

MORGAN POULTRY FARM, Route 12 B, Beloit, Wis.

X-RAY Incubator

Lamp Only Filled ONCE Makes the HATCH

Why don't you get an incubator that will save you two-thirds expense in time and oil—an incubator that is built the only practically sensible way—the only real invention in years? Don't think of buying any incubator until you send us a postal or letter for our new, Free, Practical X-Ray Incubator Book. It contains an interesting description of the new principles that are making the X-Ray sell faster than any other incubator—shows why the X-Ray Tubes give the only perfect ventilation and heating system—how the lamp is placed right under the center of the incubator, so that every part of the egg chamber is supplied with fresh, warm air—one filling making the hatch—automatic device regulates flame—no waste heat—eggs turned by simply lifting lid which has glass top through which you can see thermometer at all times. Our 60 Days' Trial will demonstrate how perfectly an X-Ray works—how uniformly large hatches it gives at one-third expense for oil. Just write us today—now—for free book.

THE X-RAY INCUBATOR CO., 1st St., Wayne, Neb.

Absolute Evidence

THIS testimony from the highest authorities puts beyond question the superiority of Prairie State Incubators. When all the leading Experiment Stations of America put their endorsements on the Prairie State as evidenced by their letters below, what better proof can we offer? What better guide do you desire in deciding what incubator is best for you?

Note Please—New England, the Middle Atlantic, Central and Southern States, Canada and the West are all represented showing the adaptability of the Prairie State to every locality and condition.

Such testimony is incontrovertible. It proves that our Sand Tray Machine has removed one of the great stumbling stones which blocked the way of success of thousands.

MORE CONCLUSIVE EVIDENCE IS NOT OBTAINABLE

Alabama Experiment Station

AUBURN, ALA., May 9, 1907.

GENTLEMEN:—I set my Incubator and got a good hatch of very nice, plump chicks and Allen's is hatching today.

I think you have a good machine, and I can sell several if you will send me advertising matter.

C. C. Hay

Maryland Experiment Station

COLLEGE PARK, PRINCE GEO. CO., MD.,

June 15, 1908.

GENTLEMEN:—Your letter of June 9th has been received and noted. I am glad to say that your goods have given entire satisfaction, especially the Universal Hoyer. During the four months that I have operated the brooders I did not have one lamp to smoke. This is a point that cannot be overlooked, as a smoky brooder means ruin for the poultryman.

C. L. Opperman

Connecticut Agricultural College

STORRS, CONN., June 19, 1908.

GENTLEMEN:—We have seven of your Incubators in use here alongside of many other makes. The Sand Tray machine not only gives as good hatches as any incubator at the College, but when properly handled produces large, vigorous chicks.

I consider the Sand Tray Prairie State Incubator one of the best.

C. A. Graham

Texas Experiment Station

COLLEGE STATION, TEX.,

Sept. 25, 1906.

DEAR SIR:—The No. 1 Prairie State Incubator you sent me about a year ago is giving perfect satisfaction. I would like to have you quote me price on a 300-chick Brooder for use at this college for instruction.

W. H. Lindsay

Quebec MacDonald College

STE ANNE DE BELLEVUE, P. Q.,

Sept. 4, 1907.

DEAR MR. NIX—I have your favor of August 24th, and in reply will say that the Prairie State Incubators and Brooders have given satisfactory results. The Incubator gave 75% of the fertile eggs, which was about 14% better than the best of several other makes tried.

J. C. Elford

Iowa College of Agriculture

AMES, IOWA, June 19, 1908.

GENTLEMEN:—Your favor of June 9th, addressed to the College has been referred to me. Our equipment of Prairie State goods consists of two No. 2 Sand Tray Incubators, ten Universal Hovers, grit boxes and drinking fountains. The Universal Hovers are placed in 8x12 colony houses, two to a house. All of this equipment has given us good satisfaction. The brooding apparatus has enabled us to raise chicks in larger flocks than we are able to do with any other commercial machine.

H. C. Dene

Rhode Island College of Agriculture

KINGSTON, R. I.,

June 8, 1908.

DEAR SIR:—I received an Incubator from you some time ago and find it has been improved since last year and I got an even hatch of nice, big chicks.

Arthur B. Holden

Nova Scotia Agricultural College

TRURO, NOVA SCOTIA, Nov. 18, 1907.

DEAR SIR:—The Universal Hovers which we purchased of you last spring have given satisfaction. We have attached them to two small coops and find them very handy, as we removed the hovers, when the chicks were five weeks old and give them the use of the coops. A good feature of your hovers was a noticeable saving in the amount of oil required to keep the temperature up to the proper degree.

J. P. Landry

North Carolina Experiment Station

WEST RALEIGH, N. C., June 8, 1908.

DEAR SIR:—In reply to yours of the 2nd, I would say that we have used quite a number of your Universal Hovers, for the past three years and have found them a very satisfactory brooding device, so much so that for the last season we have used nothing else.

J. J. Hays

Cornell N. Y. College of Agriculture

ITHACA, N. Y., June 16, 1908.

GENTLEMEN:—We have four of your 150-egg capacity Incubators and four 100-egg capacity. We have had the machines running continuously since January and have obtained very satisfactory hatches all along. Several of the hatches in April, May and June were exceptionally good.

W. Burton Somers

Michigan Agricultural College

EAST LANSING P. O., MICH.,

July 7, 1908.

GENTLEMEN:—I take great pleasure in saying that we have most gratifying results with the Prairie State Incubators the past two years. They hatch good, strong, healthy chicks, that it is a pleasure to brood.

J. G. Halpin

Virginia Agricultural Institute

HAMPTON, VA., June 8, 1908.

GENTLEMEN:—Some months ago we received from your hands a 150-egg Incubator and have given it a thorough trial. It meets our expectations in every way, hatching a good percentage of vigorous chickens with each trial.

W. S. Sweetwater

Ontario Experiment Station

GUELPH, CANADA, October 1, 1906.

DEAR SIR:—We have used six of your Universal Hovers, also one Colony Brooder, during the past season. These have been the most satisfactory brooders, all things considered, that we have used to date. Your method of introducing pure air or fresh air beneath the hover is the best that we have seen so far.

M. C. Graham

These Letters Should Decide You. After reading such proof as the above, don't you think it is decidedly to your advantage to put your money and trust in Prairie State Machines? They are built by one of the oldest, most successful makers known—backed by years of successful use, and have kept in the lead by improvements that are always ahead of others.

You Want Chicks That Grow Into Cash Profits. You'll get them when you run a Prairie State, just as these people have. Why waste time and money experimenting? Why plunge yourself into loss and discouragement by purchasing an unproven machine? Don't let people

guess at your expense. Buy a Prairie State and make assurance doubly sure. You'll have no regrets then.

It's Living Vigorous Chicks You're Looking for. Invest your cash in a machine that's safe; that hatches chicks so full of vim and vigor that they are bound to live and grow into money fast. A machine built on the latest, most natural and successful principles. We don't ask you to take our word that the Prairie State hatches chicks that "Live," and the most of them. These people who have written the above letters have done it, so can you. Catalog is free and tells you how to succeed.

PRAIRIE STATE INCUBATOR CO., 468 Main St., Homer City, Pa.

THORNILEY'S MOTTLED ANCONAS

Bred for heavy winter egg production and standard requirements. I breed the one kind. My birds are constant layers and are money makers. I exhibited nearly a quarter of the Anconas exhibited under the A. P. A. rules last year and can give you show winners at living prices. My stock is of the very best blood lines in the world. Write for prices on stock and eggs. Circular and price list mailed free.

You Can't Beat It for Results You Can't Beat It for Price

The Reliance 240 Egg Incubator will give all the satisfaction you can get from any incubator manufactured—and the price of the Reliance (240 egg size) is only Ten Dollars. 120 egg size \$8.00. You can pay double this figure for other makes and then not get an incubator that will last longer or hatch out more chicks, egg for egg. You can't, at any price, get an incubator that is made of better materials, more scientifically constructed or that is easier to operate. *Ten Dollars for the Reliance Incubator includes everything.* There are no extras to buy. You get the incubator complete ready for your eggs.

The Reliance hot water heating system is the best known. It is absolutely SAFE. Has always been made that way. We have sold over 200,000 incubators and have never heard of a single one exploding, burning up or doing any damage whatever. The Reliance is self-regulating, self-ventilating, and requires very little oil.

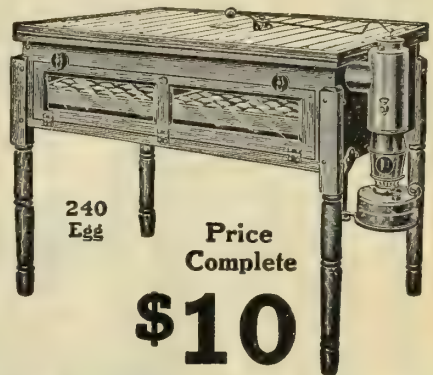

Reliance Incubators and Brooders

will please you as they are pleasing leading poultry raisers everywhere. They are sold under a guaranty which insures your satisfaction or your money back.

Price of 100 chick Outdoor Brooder, \$5.50; 100 chick Indoor Brooder, \$4.50.

Fancy prices cut out on everything. Full quality put in on everything. Don't pay for something that you don't get. Don't pay more for any incubator than you can get the Reliance for. Don't buy any incubator until you know exactly how the Reliance is made—how safe it is—how certain it is to hatch out the chicks. Send for FREE BOOK telling all about Reliance Incubators, Brooders and Poultry Supplies. It tells you why our prices are low, illustrates and explains all our products and gives money-making hints and suggestions that are valuable to every poultryman. Your name on a postal card will bring it. Write today.

Cooling Eggs

NO DOUBT MANY POULTRYMEN

that have used our brooders and found them so successful and others that have noticed our advertisements have often wondered why we did not offer an incubator. To these and other poultrymen we wish to make an announcement.

The "ROOT INCUBATOR is now ready for you"

Mr. Root, the inventor of the CONTACT WARMTH incubators and brooders realized many years ago that the HOT AIR conditions under which eggs were hatched and chicks reared were unnatural, and to avoid these unnatural conditions he came to the conclusion that it would be necessary to hatch eggs and rear chicks by warming them by contact with a warm body.

With this method it is possible to hatch eggs without adding moisture, because the air that gets to the eggs has not been burnt or baked passing through heating drums, etc.

The ROOT INCUBATOR will hatch duck eggs equally as well as chicken eggs under the same conditions, without adding moisture or changing the ventilation. This is proof that it is built on the right principle, because a hen will hatch duck eggs equally as well as her own.

We have prepared a pamphlet under the heading of "ARTIFICIAL INCUBATION and BROODING," which every poultry man should read as it dwells upon some phases of this art never before dwelt upon. We will send a copy of this article free to anyone sending us their name and address.

THE ROOT INCUBATOR CO.,

Desk No. 4, CLEVELAND, OHIO

NOTICE

Mr. Irwin Rosenberger, Brown City, Mich., says, "The Thomas Convertible Brooder is the one that raises strong, healthy chicks. It has come to my poultry plant to stay."

CERTAINLY! When a brooder holds the enviable reputation of not having a single dissatisfied customer, it is bound to make friends.

The Thomas Convertible Brooder is made in one size only. Price \$8.

The "Ringlets" Stand Alone VICTORS OF THE FIELD

At America's Imperial Show, Madison Square Garden, N. Y.,
The Week Before Christmas, December 17th to 21st, 1907
E. B. Thompson's Barred Plymouth Rocks

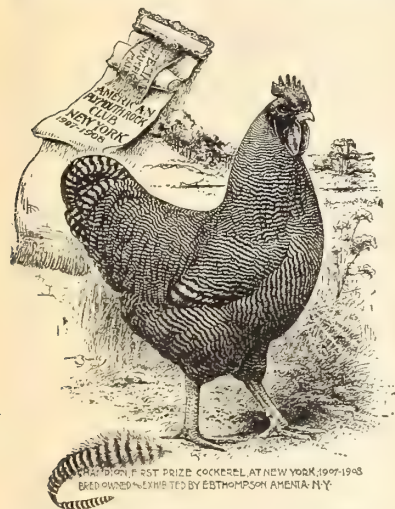

as usual win the leading prizes and achieve the highest honors that can come to any breed. First prize on cockerel, first prize on cock, the great National Silver Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. Double the number first prizes of any competitor. Special for best shaped male, special for male having best head, special on hen, special on pullet, the Sweepstakes special in Gold for best Plymouth Rock on exhibition of either sex and any variety.

The Imperial Prize of the Show, Special for Champion Male.
This Last New York Show was the Most Classic of All Poultry Events Ever Held on American Soil.

My exhibit was stamped with the seal of "Ringlet" perfection.
All Concurred in the Opinion that my Champion First Prize "Ringlet" Cockerel was the Ideal of the New Standard of Perfection.

The great artist, F. L. Sewell, said: "Mr. Thompson, I cannot, with all my skill, do that Bird Justice, Twenty Years Ago on this Same Ground my "Ringlets" won ten silver medals and since that time in Madison Square Garden their victories have been complete.

The Enormous Prestige of the "Ringlets" Created by Superlative Quality Has Made Them the Standard by Which All Other Barred Rocks are Judged

First Prize "Ringlet" Cockerel and winner of Special Prize for "Champion Male" at Madison Square Garden, New York, Winter of 1907 and 1908. From photograph—worth more money than any Barred Rock ever produced; living or dead.

I now have on my farm the largest and finest lot of superior exhibition and breeding birds I ever owned; they show the "Ringlet" barring and the sharp contrasting colors that win under all judges.

Richly illustrated 50-page catalogue mailed upon request; it is full of original pictures of New York winners from life. 1000 grand breeding and exhibition cockerels for sale. Elegant hens and pullets in any number. Show birds fit to win in any competition.

Victor Incubators

do not waste your eggs, oil or time. You cannot afford to fool with a machine which makes poor hatches, or which is liable to fail and destroy all your effort. Ertel machines are not that kind. They are correct in design, perfect in operation, and sure in results. We are building them to meet the requirements of the Fire Underwriters, and to conform in all respects to the suggestions of the United States Department of Agriculture.

We pay freight.
We give you

200 Egg Victor Incubator

Note the corner cut away in the picture to show the egg trays and nursery and the triple walls—sides, top and bottom.

Note the double glass doors.

Note the new side regulator which leaves the top free and clear.

Note the big generous size lamp.

Note the big 14-oz. copper tank.

In every way this is a splendid dependable incubator.

Write us for a price delivered at your railroad station.

Machines that Profit a Record that Tells

Ertel's Poultry Diary

shows how to keep records that tell what your poultry is producing in the way of profit. There are spaces for eggs laid, chickens hatched, what your feed costs and what you get for what you sell. No other way can you figure out what you are making.

Poultry raising is a business which must be conducted on business lines. To succeed you want modern machinery, and business-like methods of recording the results.

Ertel's Poultry Diary tells about the latest and best incubators and brooders, and how you can get them at prices that are low, and have freight paid to your railroad station. It also provides the blanks for keeping the proper records.

Better write us today, and get the advantage of the information this book contains. Use the enclosed coupon or drop us a postal card mentioning this paper.

AN AUTOMATIC MOISTURE REGULATOR

I have the honor to offer you the first moisture regulator to regulate the moisture in the hatching chamber. A device that not only supplies moisture, but turns it on and off *automatically*, as needed.

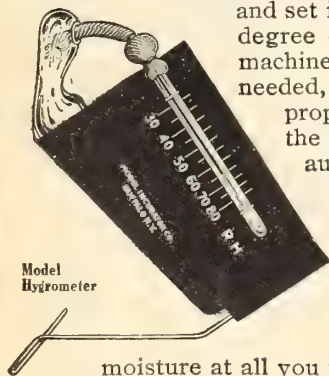

The Model Moisture Regulator

Controls the degree of humidity in the Model Incubator just as the famous Model Thermostat controls the heat.

The Model Patent Automatic Moisture Regulator can be quickly and easily adjusted to any Model Incubator, old or new. There is nothing complicated about it, and it is not difficult to attach it to the Incubator. A special Hygrometer is sent with each Regulator. This is simply filled with water

and set in on the egg tray near the thermometer that registers the heat, and the degree of humidity is read the same as the degree of heat is read. When the machine is heated up and the Hygrometer shows that additional moisture is needed, the water valve is adjusted so that it lets in a little water. When the proper degree of humidity is obtained the regulating nut is adjusted so that the flow of water is shut off, and after this it will turn water on and off automatically. If the weather is too dry for normal hatching conditions moisture will be supplied automatically thereafter. When the weather is normal and there is enough moisture in the hatching chamber the supply of moisture will remain turned off indefinitely. On the other hand, the "wet sand tray" and other devices continue to supply moisture whether it is needed or not. It has been proven time and again that too much moisture will do more harm than too little, and these devices constantly err on the side of too much. If you want to supply

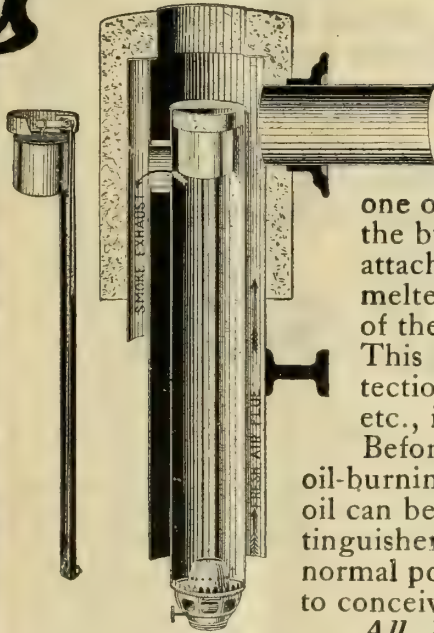

moisture at all you want a Model Patent Humidor and Moisture Regulator.

CHAS. A. GYPHERS, President, MODEL INCUBATOR CO.

MODEL PATENT FLAME EXTINGUISHER

New this year, is a practical device that will put out the flame before the burner or oil can become over-heated.

The burner and oil can only become over-heated through the operator turning a flame high enough to smoke. With the New Model Extinguisher, within one or two minutes after the lamp flame smokes, and before the burner can become over-heated, a small fusible link, attached to the base of the chimney part of the heater, is melted and releases a smothering cup suspended in the top of the chimney flue, and the flame is extinguished instantly. This is on the same principle as the link used for fire protection in sprinkler systems, and to hold fire doors open, etc., in large Mercantile and Factory buildings.

Before oil can be set on fire it is necessary to heat it. In all oil-burning lamps it is necessary to heat the burner before the oil can become heated. With the Model Patent Flame Extinguisher it is utterly impossible to heat the burner above a normal point without extinguishing the flame. It is impossible to conceive of a more perfect safety device.

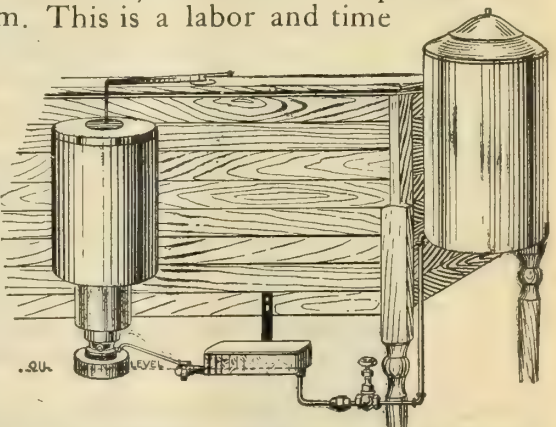

All Model Incubators are now equipped with the Model Patent Flame Extinguisher.

The Model Patent Automatic Lamp Filler

Is the greatest economizer of time and labor ever put on an incubator or brooder. It keeps the lamp filled throughout the hatch, and maintains a uniform oil level which insures a uniform flame. The lamp fount is reduced to diminutive size and is kept automatically filled from a barrel or tank; which can be placed at a distance, or even outside the incubating room. This is a labor and time saver for those operating a number of Incubators or Brooders.

This apparatus complete consists of a small lamp bowl, regulating float valve and connections for either side, i. e.—the feed pipe that drops into the lamp bowl and the supply pipe, including the union and main line valve. From this point it can be connected up with a quarter inch pipe to a barrel or oil tank of any kind that sits a foot or more higher than the float valve. The main line pipe can run along a row of incubators or brooders, taking in one after another.

As always, the improvements in the Model show distinct progress, insuring biggest hatches with lessened labor. Send for new descriptive literature.

CHAS. A. CYPHERS, President, MODEL INCUBATOR CO.
301 HENRY ST., BUFFALO, N. Y.

Greatest Combination

Offer of Modern Times

By special arrangement with the publishers of Modern Priscilla, Pictorial Review and Ladies' World, we are enabled to offer these three high-class magazines with American Poultry Journal for one year for only \$1.35, and in addition give one Dress Pattern.

American Poultry Journal,	50c	\$2.65
Ladies' World - - -	50c	
Modern Priscilla - - -	50c	
Pictorial Review - - -	\$1.00	FOR
One Dress Pattern - -	15c	\$1.35

If you purchased these magazines from your news dealer for one year the cost to you would be \$4.35. You will therefore be making a saving of \$3.00 if you send us your subscription now.

American Poultry Journal is the oldest poultry publication in America, and contains more valuable information for poultry raisers than any other poultry paper published in the world. In addition to this there will be five more of those handsome full-page colored plates of poultry inserted during the coming season, any one of which is worth more than the price of a year's subscription.

One of the special features of American Poultry Journal this season is the continued story of the Walling Family and their experience in the poultry business. Much valuable information for the amateur is given in this story. There will also be many new features added from time to time, which will always keep American Poultry Journal at the top.

Modern Priscilla is one of the best Embroidery Magazines published. It is the recognized leading Fancy Work Magazine of America. It is the undisputed authority on all kinds of embroidery, knitting, crocheting, lace, costumes, lingerie, and home decorations. It is filled from cover to cover each month with designs, instructions, descriptive articles, and valuable information. Aside from the strictly fancy work departments, there are departments devoted to China, oil and water color painting, stenciling, pyrography, leather work, basketry, and the like. It has many helps for housekeepers, and is a real good magazine for the home.

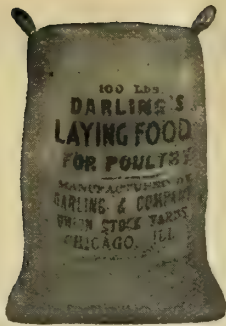

Pictorial Review readers appreciate the value of the up-to-date minute fashion service of that magazine. It has four foreign offices, managed by fashion experts, in Paris, London, Berlin, and Vienna. It keeps its readers in touch with what is newest and most smart in seasonable style. Pictorial Review is not solely a fashion magazine.

Its fiction is clever and interesting, its articles broad, and of national interest. Some of the regular departments and practical lessons in home dressmaking, millinery, crocheting, housekeeping, and household finance, sanitation, home decorating and furnishing, money-making suggestions for women, the care of children, a page for elderly people, wit, humor, and puzzles, echoes from the stage (illustrated), etc.

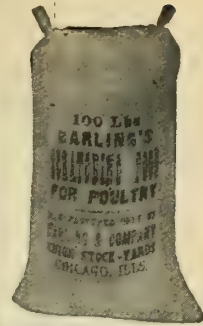

Ladies' World is recognized as one of the foremost Ladies' Household Magazines. It is bright, entertaining, wholesome, practical, carefully edited and thoroughly up-to-date. For 20 years it has been steadily improving in quality, and is unquestionably the cheapest high-grade domestic magazine published for women in this country. It is profusely and artistically illustrated and the handsome colored covers are changed with every issue. It contains from 36 to 44 large pages, size of Ladies' Home Journal. It gives more for the money than any publication in its class. It is a practical magazine for progressive women.

Remember, the price of this Combination is only \$1.35. Fill out your order today and send it to

**YOU CAN
BE A
SUCCESSFUL
EGG GETTER**

Materials for Your Hens to Work On

It's the business of hens to make and lay eggs, but they can't make something out of nothing. Give the hens a chance. You must help them in order to have them develop into good layers. It is absolutely impossible for hens to lay unless they are given egg-making materials in their food.

Let Us Aid You

We have made a long, careful study of materials that induce laying.

Our experts have gone into the matter in a scientific way. They know from analysis what food materials are richest in egg-producing ingredients.

Hundreds of leading poultrymen have taken our experience for their guide and have become successful egg getters by feeding.

DARLING'S LAYING FOOD

There is no mystery about Darling's Laying Food. It is rich in egg-making material. It contains no worthless ingredients. It is not a patent nostrum. It produces results because it supplies to hens the materials which they require.

In 100-lb. Sacks, Price \$2.00

METAL MOTHERS

OUR NEW DISCOVERIES MAKE

POULTRY KEEPING EASY AND PROFITS SURE

OUR MACHINES were used exclusively in the original PhiloSystem plant where over \$1500 FROM 60 HENS IN TEN MONTHS has been cleared from the sale of eggs, baby chicks and fowls raised on a city lot 40 feet square. One of the largest hatching plants in America saved over \$700 this year by using our System of brooding. We sell the best brooder ever made for only \$2.50.

One party hatched and raised \$500 worth o poultry last year with four Metal Mothers, and hundreds of others are delighted with our machines and our new way of raising poultry. Our combined machine hatches and broods perfectly at the same time with only one lamp and one-fifth the oil used in other machines. Once filling the lamp completes the hatch. It runs as steady as a clock in any room from cellar to garret, and our Long Burning Safety Lamp runs on for weeks without attention. It is the only machine that airs the eggs in the natural way and applies the heat to the chickens like the mother hen.

THE BROODER-HATCHER

OUR 1909 PATTERN METAL MOTHERS

are the perfected results of the latest discoveries in artificial incubation. They will hatch hens, ducks, turkey and goose eggs equally well and at the same time. Regulation of moisture and heat entirely automatic. One Metal Mother complete \$7.50; wo, \$14; four, \$24. One Hatcher complete \$5; two, \$9; four, \$17; six, \$24. Catalogue free.

The Cycle Hatcher Co., Elmira, N. Y.

Dear Sirs:—As per your letter I will send you an order for six machines in a few weeks. Am hatching with the one I now have. Got 47 chicks from 50 eggs. Have abandoned all my 200-egg machines. Am practicing in my store with a view to starting my 40-acre poultry plant near town here. Think I can sell a lot of these machines next year.

H. W. White, 311 Ada St., Yankton, S. D.

The Cycle Hatcher Co., Elmira, N. Y.

Gentlemen:—The hatcher we bought of you last May is all right. We took off two hatches with it; one of 43 chicks and one of 46 chicks. All good ones. Yours respectfully, G. W. Simpson, Austin, Pa.

The Cycle Hatcher Co., Elmira, N. Y.

Sirs:—You people may be interested to know what an experiment with one of your Metal Mothers has done for us. On the 17th of Oct. we put 40 eggs in your machine, 38 of them being fertile, and when hatching time came we were surprised to find 38 chicks from our 38 eggs. This we think an excellent record, for the machine had been placed out in the open weather, the only protection being an old tin covered box. Yours respectfully, J. P. & L. L. Hollinger, R. 1 Red Farm, Witnér, Pa.

A GREAT OFFER

Two Leading Publications a Whole Year and a Beautiful Colored Picture all for the Price of One

WE have perfected arrangements whereby we can send the best and most practical farm and family paper published, **FARM AND HOME**, in connection with our own publication, on the remarkable terms as given below.

Semi-Monthly National

FARM AND HOME

24 Numbers Over 600 Pages

We are unable to give but a brief description of **Farm and Home**, which is unequalled for variety and excellence. It is pure, bright and practical all the way through, teeming with all the latest and most reliable information that experience and science can supply. For village, suburban and rural residents it will be found well-nigh indispensable, meeting the requirements of the entire family. No better proof of its popularity can be offered than its enormous circulation, which extends into every state and territory, each number reaching over two million readers. Sample copy sent free on request.

"Washing Day"

FREE THIS COLORED PICTURE FREE

An extremely attractive picture, appealing forcibly to every lover of child life—and who does not enjoy watching such a scene of complete innocence and happiness as the artist has so carefully depicted in the painting? From an artistic standpoint as well, this picture makes a most favorable impression, with its dainty and beautiful colorings, its accuracy of detail and lifelike arrangement.

The above illustration, although greatly reduced in size, gives a fair idea of its appearance. This picture is made in the very popular panel shape, so desirable for narrow wall spaces and measures 12x20 inches in size. It is mounted on heavy lithographic paper with narrow white margin all around for framing, if desired.

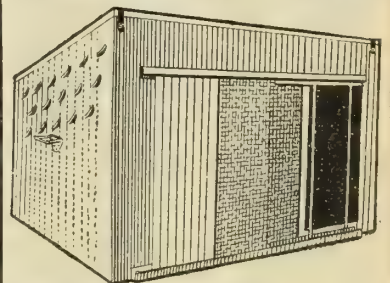

OUR OFFER

American Poultry Journal, One Year 50c } Both For 60c
Farm and Home, One Year 50c } Only

As a special inducement for prompt replies to all who accept the above offer within thirty days, we will also send the picture above described without further charge. Address all orders to

American Poultry Journal Pub. Co., 113 So. Clinton St., Chicago, Ill.

RAT-PROOF COOP

Protect Your Chicks From Rats, Mink, Weasel, Skunk, Lice and Mites
The Sanitary Metal Brood Coop

is just the thing you've been looking for. It's a boon to poultrymen for it means safety, clean quarters and health to the brood. It's made entirely of galvanized iron, not a splinter of wood in it. You know you can keep it vermin-proof. Purge it in the fire if you want to.

No Dampness, No Roup

Chicks and mother always perfectly dry. Exclusive pattern made and sold only by us. Adds 100 per cent to profits and keeps down cost and expense of poultry raising. Made in knock-down form. Can be taken apart and stored in little space when brooding season is over.

Write for free circular, fully describing this and full line of other sanitary appliances.

THE POULTRYMAN'S ADVERTISING.

Hints and Ideas on the Advertising Proposition—For the Progressive Breeder Some Points on Catalog Building and Timely Advertising—The Foundations of Business-Getting.

Written for American Poultry Journal by Amos Burhaus, Waterville, Minn.

To the breeder who has really made something of a name for himself as a producer of high-class fowls the subject of advertising is one of more than ordinary importance. It is the one thing that keeps the life in the business. A breeder will not take great interest in the business even after he has succeeded in making a record for prizes if he cannot dispose of the product of his skill and brains.

It is the number of sales and their value that spur him on to better winnings and better birds. Nothing but fancier's ankylosis follows where the interest in his stock is of narrow origin. And this matter of getting the best advertising results is one of intense interest when it is taken into consideration as an investment pure and simple.

A definition of advertising in its modern sense tells us that it is anything or any combination of details which brings our birds before fanciers who have and have not heard of us before.

The breeding of pure-bred fowls has assumed an importance during the last twenty years which places it among the businesses of breeding no less important than other enterprises which have for their foundation the best live stock that can be bred.

The breeding of poultry has passed the point where it is a hobby with the majority who have engaged in it. We are breeding better fowls than formerly because there is a demand for them. And as the years pass it seems that the quality in demand goes higher. All of us cannot be at the top. Each one has a niche to fill in the scheme of earthly things, and who would be contented with his business must do the best he can with the knowledge and skill he is possessed of.

John Doe, of Hensfoot Corners, is breeding the best he can. He has persisted in advertising them in his local way until he has built up a nice business from his standpoint. He is a buyer. He buys from the breeder who fills the niche just above him, for that is the best he thinks he can afford; and in turn the man above, John Doe's patron saint, buys from a breeder still another niche higher.

We are all buyers when it comes right down to the root of the matter, and advertising has more effect on us than we think. For instance, let us take the breeder who has won for a few years at the best shows in the cradle of the fancy. He is in search of something new in the way of blood which will do to place with some of his matings. He buys from another breeder. He buys because he thinks he is getting something better than he has in his own yards for the purposes desired.

There were impulses at work from outside himself which made him look to any breeder he may have sought to help him in his difficulty. These influences or impulses were advertising. Just what form of advertising we cannot say, though they were advertising, we may be sure. Advertising has influenced you whenever you think of another's birds. Thus we see that whatever makes for publicity of our birds has in some measure directed thoughts concerning us.

Methods of Modern Advertising.

There are a number of ways to get to the top in advertising results, but the method used most successfully and the one having most lasting results is that of getting in touch with prospective buyers of good fowls through the poultry journals, letting them know what you are offering and why they should buy of you.

Not long ago the writer was in conversation with an embryo breeder who was sure that any man who could produce the quality that would win at the best shows, selling it to others to win with, himself not putting forward aught but the birds, would in the end build up a great breeding business without one dollar's worth of advertising expense.

The last word in the foregoing sentence was where the young man's ideas were wrong. Advertising is not an expense. It is an investment. The correct attitude in which to write an advertisement is one from which advertising is viewed as an investment. If you have the birds the other fellow is looking for let him know it and he will pay your price for them. That is, he will buy if your price is consistent with the quality.

The breeder will soon find out that the man who tries to market a product without an expense is traveling the wrong road. One must figure something in the way of marketing expense, for this is a legitimate part of the producing cost. But advertising, whether it bring back four times or twenty times its original outlay, is an investment, and the more it returns the greater an investment it is.

Showing and winnings are a foundation for advertising. They are best used in the advertisement calling attention to the strain and breeder, and then followed up through the mediums of catalogs and mating circulars and literature pertaining to the flock advertised. It takes a live man to breed winners, and he must have a reserve force left to put into the advertising he uses to bring business to himself. Generally a fancier who awakes some bright morning to find himself more or less famous as a breeder can get up his advertising to fair advantage by following the leads made by those more experienced and successful, though this is dangerous ground to tread upon, it taking as much originality to put the personal note into advertising as it does to show original skill in breeding.

How Much to Spend.

The longer a breeder is before the buying public the better birds he is producing, if he has been an exhibitor as well. And it may also be added that he can expect more for the product of his matings the longer he is an advertiser. As he increases the output of good birds, so will he have to increase the amount of advertising space he has to use to dispose of them. The amount of an advertising appropriation must include the space in the journals that are to put you before the buyers as well as the estimated amount of follow-up literature in the shape of circulars and catalogs and sales- and mating-lists.

Let us take, for example, the advertising of a fancier who has done considerable winning at the state shows of the average kind: He has been winning consistently for five years. His birds are well known locally, but he needs something more than this to keep the spirit of progression going forward. His matings are eight in number and he is sure he can sell 150 settings of eggs if he can get the advertising before the right people. He asks \$3 for his best eggs. I am taking the case of a certain fancier I have in mind as a sort of composite of the class I am trying to describe. If he intends to sell \$450 worth of eggs he is justified in spending 30 per cent in getting his proposition before the buyers.

Previous advertising would have some effect on his egg sales, so we may conclude that it will not cost him quite so much as we have estimated, though this estimate would not be considered high by any fancier who was after business and to make a name for his birds. In this day a very good piece of catalog work may be gotten out for forty dollars, which would do for his mating-list. His general catalog, revised every fall, would make business as well.

Stock sales should begin early in the fall. Continuous advertising and the constant call for literature put out by the breeder, will do much to make early sales, but timely announcements will stimulate trade, as has been proven time and again. Every inquiry received should have been

popular varieties get right into the thick of the fight, and I would rather have my advertisement alongside of my chief competitor than to have it back among the ads. that it overshadowed.

A poultry journal cannot be judged as a medium for reaching buyers or inquirers by the rate it asks for its space. The cheapness of advertising is measured by the returns it gives. The papers carrying the successful breeders is the one to get into. And once in it, it is but a matter of time, and the better the ad. the shorter the time, till it begins to bring inquiries for what is offered.

After a few trials, the embryo advertiser soon "gets the hang" of how advertising is best placed in the papers. He learns that advertising continued all the time in the best journals, keeps him before the public more to his advantage than spontaneous flirtations.

The Follow-Up Literature.

Nearly every breeder who places his stock before the public has need of some sort of catalogue or mating-lists to give his enquirers information about his stock which saves correspondence. He must largely judge from the nature of what he has seen the other breeders issue, just how elaborate or attention-attracting this must be.

Any flock of more than ordinary importance must be represented with a general catalog that gives a history of the flock it represents and the method of doing business which its proprietor follows. A complete list of winnings, illustrations of the winners in his flock and its best breeding birds, testimonials, and other information which can be saved from inflation of a letter, must needs go into it.

Press comments and opinions of authorities are also used in catalogs of the more pretentious sort to good advantage. These all have their effect in stimulation of business. The smallest catalog is an agent for more business and returns its share of the advertising investment.

Mating-lists are always put out early in the year to influence the eggs for hatching trade. They should be very explicit in their setting forth the matings that make up the breedings yards. Illustrations may be used to the best advantage in these and are always the means of making the lists more attractive.

A perusal of the lists that come to one's attention every spring goes to show that many who go to the expense of

A TYPICAL CRYSTAL WHITE ORPINGTON WINNER AND LAYER
ERNEST KELLERSTRASS KANSAS CITY MO. OWNER AND BREEDER

recorded, and the name of the journal from which the query came. This list is an advertiser's stock in trade and he should keep it posted on what he has to offer.

The balance of the estimated expense should be placed in buying the best space in the liveliest journals. Good sized advertising in a few good papers should have the preference over too much spread, which would give the whole plan of advertising an appearance of thinness.

The fancier, with only a few birds, and not breeding extensively, should be represented in the largest journal that will bring him results and then carry enough space in his state journal to keep him well before the fanciers of his own locality. He must be known by the company he keeps, and be alive.

No breeder should try to be too economical in his advertising. You must be noticed if business is to be attracted.

The Journals to Select.

To say just which are and which are not good advertising journals for the fancier, would be a task that might in the end give a writer on the subject more than one bad dream. The advertiser must weigh the journals for himself. He must note their peculiarities, their state of advertising liveliness and the business throb that pulses through them.

Some journals build their reputations around the men back of them. Others have that quality of business-like appearance that makes them seem live enough to direct business to the advertiser of something attractive. The note of enterprise, thrift, appeal to the class of down-to-the-minute breeders, all are indicative of journals that will bring their patrons in touch with the class of prospective business.

Journals of large circulations generally carry the advertisements of the leading breeders if they go enough into the fancy topics. They must be paying journals as advertising propositions or these business announcements would not be in their columns. To get business from the buyers of the

1st S. C. White Leghorn Pullet at recent Chicago Show. Bred, owned and exhibited by the Parkside Poultry Farm, N. D. Easling, Proprietor, Pekin, Illinois

issuing them do not appreciate the value they might be when properly compiled and written. Nothing so helps the sales of eggs as a thorough description of the stock from which the eggs come, especially if it is of above the average quality.

As soon as the breeding season is over, where there are

any number of good breeding birds to dispose of, it is well to take advantage of the fact that there is always a trade to be supplied which has been taught to wait for bargains in breeding birds till after the matings have been used. A special sale list can be issued offering whatever the breeder thinks he can afford to spare from his breeders, giving a description of the stock and more particularly the

originality of your advertising invent some new means of legitimately bringing attention to your stock. Do this in the line of illustrations. They bring quickest returns and never fail to more indelibly impress the breeder's name on the minds of the poultry public.

In Conclusion.

The field of advertising can be best studied from the standpoint of an advertiser. The announcements of others will give you the hints needed to stimulate the matter in your own advertisements. In writing an ad. have something to say and then say it in a way to make it plain and forcible. If you think the adoption of a name for birds of your flock will be the means of making your strain more advertised and easier to remember, work out some good trade mark and hammer it into the public.

Place your name on everything you send out and be proud of it. This will make whatever you sell do more advertising for your flock.

Keep abreast of the seasons. Open any poultry paper in the country and you will find the advertisement of the man who has failed to make the proper changes in his announcement as the season advances. He is known by the habits he keeps. Do not fall into the rut he is in. Go after business with a vim that will command respect. Follow out any line of publicity that will put you in communication with more prospective customers, and never forget that the journals are the best means of keeping in front of the buyers. Journals are the backbone of your advertising campaign.

—0—

Mr. Felch says that the pullet that commences to lay earliest in life is the one to lay the largest number of eggs through life, as cattle that have the milk-producing organs active make the best cows. Select the fast-growing, early-matured specimens that present in full the type and size found in the breed, and use only these as breeders, and the egg-producing merits will be increased. It is care and attention to the flock that finds and secures these merits in the progeny. Neglect and haphazard breeding never pays.

best birds, those that have been of great breeding value or winners.

Every piece of follow-up advertising that the breeder places in the hands of his inquirers just that much more strengthens him with those who have gone to the trouble to ask something about his flock and how he does business, whether they have been buyers or not. The public that the breeder has to play to is the public he has paid to secure in the shape of queries and these must be kept in touch with what he is putting on the market.

Value of Illustrations.

We have been charged with being a nation of picture lovers, and there is some foundation for truth in the assertion. The value of illustrations has caused some of the breeders to go so far as to secure the best work they can buy in the way of ideal illustrations by the foremost artists, but this work is not now as valuable as formerly, principally because the beauty of the photograph taken by the experienced fowl photographer has spoken the truth in illustrations.

Illustrations that deceive the buyer are only intended to send business to others after they have been used on the buyer once. I know a breeder of Barred Plymouth Rocks who has become an expert with the use of a camera because he was after the truth in pictures for his own catalogues and advertising. He has made a reputation for the beauty of his catalogs and the illustrations in them and would command a high salary as an artist if he should choose this line of work. Even a good photo will show a bird up to better advantage than it really is, hence the need of caution in the use of illustrations.

Advertisements are the more attractive for the use of a small but clear and well printed illustration. It commands instant attention as soon as the page is turned and gives a spice to the advertisement if the illustration is appropriate.

The journals are eager to publish the photographs and other illustrations of their patrons and if the work you get done along this line is of more than ordinary merit it will be the means of bringing publicity to you which could not be had in another way. As your business grows let the

Almost infinite are the reasons for dead chicks in the shell. The incubator manufacturer is not the responsible party. If the incubator will produce sufficient heat, will permit of accurate regulation of heat and will permit a wide adjustment for ventilation, the manufacturer has done his part. The rest of the responsibility rests with each individual operator and breeder.

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communications about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded to G. E. Kiner, Wiggins, Colo., and the second prize to Henry G. Hincheliffe, Corona, L. I.

A SECOND HANDED SUCCESS.

"There isn't any money in hens!"; I had often read that statement in poultry magazines, but never thought for an instant that a real farmer would say that very same thing in the very same way. One, I know, did, however, and while I was not surprised, still I was afraid that he had read the remark, as I had, and was springing it on me.

My farmer was a successful one, having a fertile farm

down well and covering with sand and lastly the sweepings from the barn.

To properly feed was a question that gave me much concern. My stock were not accustomed to many of the good things of life; as my farmer rightly said, what's the use of throwing in good feed when you get nothing out, but his plan, if carried out, would mean retrograding to the point of starvation. I decided that poultry is considerably like a savings bank: put the food in and get the interest out along with the original value. Corn on the ear had been the diet, together with what table scraps and other rubbish that could be spared from the pig pen. As a sudden transition from starvation to plenty is conducive to gout and other ills, I decided to work in a few changes and that gradually. I first substituted cracked for ear corn and then corn and oats; I then tried a little rye, but it was not appreciated. The farmer was very much averse to buying feed, even for his horses, and as he did not grow anything but corn, oats and rye that could be utilized for feed, it took persuasion to get a little wheat, bran, shells, charcoal and grit out of him. I might add here that the chicks I left entirely with the housewife, as I felt that her motherly instincts had my wisdom beaten to a standstill.

I fed entirely by hand, and I was liberal, and I alternated the feed day by day. You will be surprised how many combinations you can form if you will only think and try: corn and oats, oats and wheat, corn and wheat, bran and oats, etc., etc. Every day I shook the apple or cherry trees, as the farmer said the fruit was good for no other purpose. I also patiently attended the water pan. The grit, shell,

View of central laying houses used for layers only, at the Parkside Poultry Farm. Standard line bred S. C. White Leghorns exclusively. N. P. Eastling, Prop., Box A, Pekin, Ill.

in the center of Long Island, and I was the summer boarder. Being "hen struck," the first thing I visited was the coops, and to my questions the foregoing reply. I witnessed many funny things in my first few days, such as the boy going with the egg basket, not to the pens, but to the neighbors, a few of whom were prosperous poultrymen. City prices were the rule, too.

After laying awake all one night, thinking, I resolved upon a plan of action. As I hinted before, I am a devoted friend of, or a rabid crank on, poultry, but am cautious in approaching the matter when an investment is talked about; here was an opportunity, though, to handle an experiment, to gain some experience and draw some conclusions. My farmer gave his permission very readily. I could do what I liked with the chickens, except kill or sell, unless to his advantage, and he was to be consulted before any were parted with; all he wanted, said he, in return for the risk of my handling was to stand by and laugh.

My stock consisted of about sixty head of White Wyandottes and a few of Barred P. Rocks; all looked happy and healthy, but would not produce the shelled goods. They had very nice houses that had cost too much, at least so said the farmer, and their large square runs were shadowed by apple and cherry trees, which he claimed they ruined by attracting insects and vermin, and then driving them aloft on pain of death.

The first thing that I resolved to do was clean, which I am sure is of utmost importance, not at first alone, but at last and in between. I cleaned well, using scalding water by the tub, soap, carbolic acid, kerosene and whitewash. I dug out the dirt floor of the roosting house and filled in again, first with stone and then with fresh earth, stamping

etc., I kept in a trough which I had divided into three compartments, and had slatted over top.

Disappointment is bound to come to all at some time or other, and I was not too sanguine, especially as to immediate egg results, but inasmuch as my remaining two weeks' work failed to bring about a result worth the work, I had to submit to the laugh as bargained.

I left this glad retreat in sorrow, for I was deeply interested and somewhat sore; still, I felt that had I been able to continue I would have been successful.

How often do we think that we have failed and our work has been in vain?

But can we always be sure that it has? I can say that the word "failure" is too deep and far-reaching for everyday use, and offer in proof this evidence: One of the sons of this backward farmer, a young man of 22, first amused, then inspired by my zeal and heedless of my later misgivings, took hold of the home flock proposition and made it pay, increased his lead and won! But this is another story for another time.

Corona, L. I.

Henry G. Hincheliffe.

EGG AND FEATHER EATING.

With an experience of twelve years as a poultry breeder, I have discovered numerous faults and vices in chickens that would not likely enter the mind of a beginner, and would in some cases cause him to turn away in disgust.

The egg eating habit, one of the worst vices that can ever creep into a flock of fowls, and when once started in a flock spreads so quickly from fowl to fowl that measures must be prompt and effective or a great loss of profit will

be sustained and more especially so if occurring in the breeding season.

The most important causes which lead to egg eating are, excluding soft shelled eggs, the dropping of an egg or eggs in the run, the hens picking at them, or the breaking of an egg in the nest or an egg being left to freeze and thus burst so that it is easily picked by hens; any or all of these may be avoided by careful attention to the flock at all times.

Whether it is natural or unnatural for some hens to eat eggs, we will not attempt to say, for the purpose of this article is to state how the habit, when once formed, may be broken up.

As illustrative and instructive, we will take for an example our own case. Some few years ago we had eighty-five W. P. Rock hens and pullets running on free range, and were housed in a large building with tight nest attached on outside of building and on the ground with openings leading into each nest separately. As these nests were convenient to set hens in several were used for that purpose, but after the setting hen and her brood were removed we neglected to take out all of the egg pippings, which led the hens to scratch in the new nest material, accidentally breaking some eggs, which were quickly eaten. The damage had been done, and when we awoke to the fact, the entire flock had developed into a bunch of egg eaters.

So anxious were those hens in their desire for eggs that the egg yield had dropped to below one dozen per day, and when one of them did go in to lay a bunch would stand around the opening waiting, and some, more impatient than the rest, would crowd under the layer looking for the egg, and if there would drive their beak into it.

We closed these nests and tried the dark nest, but with

When an appetite for feathers is once formed through plucking them out of other fowls, the individual will have a poor appetite for eating the usual feed, taking but little of it, then taking up his hunt for feathers laying about the yard.

At this writing we have a fine breeding cockerel who is a confirmed feather eater. Our method, which we learned from previous cases of this kind, is to take them out of the coop early in the morning, before feeding time, and place them into a coop by themselves and give them a good rich mash. If during the breeding season, they may be turned into the yard again; if out of season a few days of confinement will do good.

Measures to prevent unnatural appetites in fowls should be employed at all times. So, whenever any bloodstains occur on young or matured fowls, they should be removed from the rest, the stain washed off and injury repaired before allowed to run with the others.

G. E. Kiner.

Wiggins, Colo.

THE HEN'S FOOD.

Written for American Poultry Journal by A. W. Fowler, Hudson, Mass.

Once upon a time a person gave some ham scraps to the hens. The hens, of course, rapidly devoured the scraps. The hens were laying, and the next morning laid their eggs as usual. The eggs were cooked to eat for dinner, when they were found to have a strong ham flavor. This shows conclusively that what the hen eats goes into the making of the eggs she lays. So as the eggs are eaten or made into cake

Free range for the Reds. View at Ridge View Farm, Willoughby Ohio.

no avail, so we adopted the following, which gave us more than expected results:

I made a box 10 inches wide, 14 inches long and 5 inches high; over the top of this I tacked a piece of burlap, allowing it to slope nicely all around toward the center, where I cut an opening large enough for an egg to roll through, and under this I placed a board, well padded with burlap, diagonally from upper back end to lower front end, thus, when the egg rolled through it rolled to front end of box out of sight. The board is not nailed on tight, but with one nail on each side, so it works like a hinge to permit raising box to get egg.

Over this box I set, and slightly tacked, another of same size, then set box in a suitable place for the hens to lay in.

You can see at a glance that this nest prevented egg eating, as the egg disappeared immediately when excluded. But as it took so many of these nests and quite a lot of labor to make them, I made some boxes 10 inches wide, 13 inches long and 12 inches deep, with bottoms, and tacked on the sides of the hen house. A laying hen has no room to pick her egg, and it is too deep for them to stand on edge and reach down for them. I use these nests to this day and consider them the best nest box in use.

As to feather eating, this habit is most generally formed when the birds are growing chicks getting their plumage, as they moult two sets of feathers before they have their permanent plumage, there is a continual exposure of tender pin feathers which are broken and rendered bloody with the slightest damage. Lice on growing chicks causes them to tear and break their own plumage. Overcrowding the growing stock and not letting them out until late in the morning, thus causing them to pick at each other for the want of something to do. Fighting among themselves or getting injured in some manner that will get blood on feathers will invite a chick to pull feathers out of another and eat them, for there is nothing that a chicken will pick at any quicker than a bloodstain.

or custard, whatever the hen has eaten goes into the cake or custard or are in the eggs eaten. Whether clean or filthy it makes no difference. Whatever is fed to the hens is given back in the eggs. Sour, wormy swill gathered up, whether in city or country village, helps pollute your sponge cake or custard pie if fed to the hens. Instead of custard you are in reality eating that sour, wormy swill, only it has gone through the hen's digestive organs; that is all the difference. Is it fit to eat? The egg has been called very nutritious. Why? Is it because your neighbor puts his refuse swill in a bucket and you gather it up once a week? Is it a cheap way to feed your hens? You get the swill for going around and gathering it up. As a food, how much is coffee grounds worth? And after the swill has soured how much is it worth for food for animal or hen? Let alone the production of this globe of nutrition. There is nothing more filthy than the swill on an average that is gathered from house to house, and it goes into the production of the eggs we eat when fed to the hens. The sooner we understand that the food given to any creature builds up the system by assimilating or renewing of any waste that is going on, so in egg production the food goes into the hen's system to build up her egg production. When she lays one egg she needs food to enable her to lay another; so the nutrition is in the food that is fed to the hen. Sour food is never good food. It is never good for man nor beast, and is not nutritious. We eat the hen. Then here is another way, that this stuff is eaten by man when fed to the hens; for when eaten by the hen it is digested and consequently the meat is made up of this poor quality of food. The eggs to be pure and fit for food must be made from pure feeding of the hens. The food given to the hens must absolutely be pure. Just what one is willing to put into his own mouth to eat is only to be fed to the hens. Anything unfit to set on the table for human beings to eat, so far as purity is concerned, is not fit for any animal or any fowl used for human food. Cornmeal, potatoes, etc., if properly prepared,

are good for food for the hens. The health of the hen is dependent upon the food eaten. So our health is dependent upon the food given the hen we use for food. So we must be sure that the food given the hen is absolutely clean, which the swill is not, while corn nor cornmeal would not be fit for food for man as fed usually to the hens. But it is pure. It does not contain anything detrimental to health, nothing nasty or filthy and sour. Speaking about something sour, sour milk is good for hens. It is clean. Even for a man sour milk is good for a drink. But that is a very different souring from the swill. Buttermilk is a very nice drink for hot weather for both man and the hens. There is nothing in bran or shorts (call them either one) that is detrimental to human health. So we may safely feed our hens on anything of this kind. The practice of throwing anything and everything to the hens is a pernicious one. To have our nutritious egg pure we have got to be careful what we give the hens to eat. For all practicable purposes what we are willing to use for food on our tables is good for hen food, and nothing unfit for human food should be dealt out to the hens. It should be the particular business of the raiser of hens, either for eggs or for food, that the hen eats nothing that is unfit to put into a man's own mouth. It is the same for the water, for there is a per cent of water in hen meat as there is in all meats, and the water needs to be pure. Clean sand contains nothing detrimental to human health, but sand that has become filthy by continual use by the hens in the hen house or yard is a menace to the health of both man and hen. Absolute cleanliness is necessary for egg or hen to be fit to market for food; for what the hen eats you eat in eating either eggs that she lays or in killing and eating the hen herself. A man that kept hens once got an old horse and took the skin off and cut

IMPRESSIONS ATTAINED AT THE CRYSTAL PALACE POULTRY SHOW, LONDON, ENGLAND.

Written for American Poultry Journal by Percy A. Cook, Scotch Plains, N. Y.

My visit to England from this country was undertaken solely to visit England's largest and best poultry show, held at the Crystal Palace (which is just outside of London), November 17 to 19. This building is, I think, without exception, the finest in the world for a poultry show, as the light is perfect, which is very necessary if the birds are to be seen as they really are, the sides of the building being of glass as well as the roof, and the space is unlimited. Ten thousand entries were on view, and if there had been double this number, there would still have been room.

It is a pity the Madison Square building is not larger, as more entries could easily be obtained, as some are refused every year.

Being an Orpington enthusiast, it was natural that most of the three days were spent round the Orpington aisles, but all other breeds were carefully gone over by me for the sake of comparison with the birds on this side of the water. The judges seemed to have done their work satisfactorily except in a very few cases.

Orpington entries were by far the most numerous, there being in all 792.

The class which called for the most criticism was the White Orpington cock one; every one agreed that the bird winning first should not have had a place at all. He was sold for \$50, a ridiculously low figure for a blue ribbon bird, but it was all he was worth; several other cocks in this class could not be purchased for \$300 each.

A few of the poultry houses on A. G. Clark's Rhode Island Red Farm, Willoughby, Ohio

the meat up so the hens could have it to eat. And how the hens did lay! Now whoever ate those eggs, in whatever shape, whether boiled or fried, or in custards or pie, ate old dead horse, just as literally as though they had cut slices of meat off the animal and cooked it and set down to the table and made a dinner of it. Thus we see how careless some people are of the rules of health. It is no wonder that people do not know where they get cancer of the stomach and other cancers and tumors. Where did my boy get diphtheria? Probably from the egg after the hen drank out of the sink drain. Or in a dozen other ways diseases may be developed from eggs from hens that have been kept in filthy quarters or fed on picked-up swill, rubbish and whatever comes handy. Whether clean or whether it is half decayed or filthy it is good enough for the hens. Many a case of smallpox has probably been carried in the eggs sold in the grocery store; scarlet fever, typhoid and other fevers because of somebody's ignorance. If the man had not been ignorant he would not have cut up the old dead horse for food for the hens. It made the hens lay, but I do not want such eggs in my food, nor do I want to eat them in any form whatever. And, further, I do not want to eat the hen that is fed on old horse meat. It is clearly detrimental to health to be careless, whether raiser or consumer, and the sooner the pure food idea gets into our eggs and makes it obligatory to feed hens pure and wholesome food, then we shall have stamped out a fruitful source of disease. There is no doubt in my mind but what eggs can be disease-giving or they can be the source by which we may regain our health and strength. But it is necessary to feed such food that has the elements of strength in it. Then we may talk of the nutritious qualities of the goods.

The commission man is apt to be kicked for cutting the price of the poultry shipped, when the fault really belonged at home. Not all commission men are dishonest. They are more apt to tell good salable stock than the shipper.

The first prize White Orpington cockerel was a fine bird, an easy winner, one that attracted my attention so much that I purchased him.

The Buff Orpington classes were disappointing to one who lives in America, as nearly all the birds exhibited were far too dark for us. I do not mean by this that there are not birds in England which meet the American standard of color; there are many, but they consider the darker ones more valuable, while we like more of a golden shade of buff. The same man won first in cock and cockerel classes, both birds being from a cock bird sold by my firm several years ago. I visited this man's plant and purchased some Buff Orpington cockerels, brothers and sons of the winning birds, but of the American color. I preferred all these birds to the winners, and all possessed good type. Quality was very fine in Black Orpingtons. The winning cock was exceptionally good. I offered \$500 for him, which was refused. Some people imagine that this amount invested in one bird will not pay, but it will, otherwise I should not have offered it, as I am in the business for business reasons (making money). I purchased the winning Black Orpington cockerel. I did not consider the Diamond Jubilee Orpingtons as good as we have in this country.

The White Wyandotte classes were well filled, as the breed is at present very popular in England, but the quality displayed was not so good as in America, especially was this emphasized regarding the color.

Barred Rocks did not come up to the high standard set for them in America, and the awarding of prizes in these classes did not suit the majority; they were certainly hard to follow. The Buff Rocks were too dark for America and are not very popular in England.

I liked the Silver and Golden Wyandottes, and thought the former were better than those of this country. The Partridge Wyandottes, in the past a favorite of mine, are quite different to those of this country, so much so that a winner in one country would not be looked at in the other.

They are much lighter in color and more beautiful to my way of thinking.

The Dorkings were very fine, and the winners sold for high prices, although they are not so popular as in years gone by. The rise of the Orpington was the death knell of the Dorking, as until then they were considered the best table fowl, although poor layers. One cannot hide a lighted candle under a basket; such was the case with the good qualities of the Orpington; people soon found that they were just as good table fowls and were quicker growers and would also lay twice as many eggs.

Houdans were much larger than usually seen in this country. They are very popular, and cockerels are used a great deal for crossing purposes over there.

The White Leghorns and Black Minorcas are a bigger contrast to the American birds of this breed than any other fowls. Personally I prefer the American type, which are bred for layers as well as exhibition. These two breeds in England are bred very large and every one seems to vie with one another as to who can exhibit the birds with the largest combs. The roosters' combs are enormous and in many cases they have to be dubbed for breeding purposes, otherwise they are liable to get silly in the head with the weight. Those that still retain their combs are at home, usually found adorned with a comb cage. The best hens have a large comb which covers up one eye entirely. These exhibition specimens are generally very poor layers, smaller birds being kept as layers, after the style of the American Leghorn.

The ear lobes of the White Leghorns were streaked a good deal with red and not so good as a few years back,

First prize hen, Madison Square Garden, 1907-'08. Bred, owned and exhibited by Chas. Nixon, Washington, N. J.

but those on the Minorcas were much to be admired, pure white and fine almond shaped.

Nearly all the black breeds show very much more purple than they used to, and such is the case in this country.

The show only lasts three days, but nearly all the awards are up by noon on the first day. This would be an improvement in the large American poultry shows if it could be done. Attendance was good on the last two days. Exhibitors do not put any signs or cards on the cages, and after American shows, it looks as if there is something lacking. I much prefer the American methods. There is also another lacking on the last night, that is the hustling in the packing up.

The influence of the poultry shows to some people may be likened to the piscatorial art, which we know has from time immemorial been the reverse of conducive to veracity in those who follow it. I refer to those people who are always in evidence at the poultry shows; they have wisely left their birds home, but if they had brought them, they are sure they would have won, as they were much better than the first prize winners. There is a certain amount of fascination in satisfying one's thirst of curiosity, and I have on several occasions visited the plants of these people and found what I had expected, a lot of poorly bred birds and in one case a crowd of mongrels.

FARMERS AND THEIR POULTRY HOUSES.

The poultry house on the farm has not received the attention that the merits of the industry demand. To get the best results suitable houses must be supplied the laying stock. These houses need not be expensive. Walls may be constructed of any material that insures perfect dryness. Most climates do not require more than a well-drained earthen floor, but in a moist climate a floor is essential, and in some instances it is beneficial to raise it from the ground.

With the average farmer comparatively little attention has been given his poultry house, under the excuse that poultry does not pay. Poultry, if handled properly, does pay. Give it the same attention that is given the other adjuncts to the farm and the revenue will be even better. To get the best results we must have suitable buildings, not by any means expensive, but comfortable. One might as well try to make a profit out of dairy cows wintered at the straw stack as to expect hens to pay with the treatment they often receive. A farmer who was losing his hens wrote that his hens were dropping dead and asked what was to be done. In reply, he was told to never mind—it was a way hens had—some preferred death to the treatment they received.

In building a poultry house a number of things should be taken into consideration. Always allow for growth. It is not well to build where, owing to the cramped condition, one cannot extend as the work demands. In keeping breeding stock, give plenty of room, if you wish to get the best results.

So many houses are constructed with apparently no idea of this. In this time of high-priced labor, it is quite necessary for buildings to be located not only near the house, where they can be easily reached, but also near the feed rooms and near the water supply, and have the buildings internally arranged with this in view. The roosts and drop boards should be constructed so that they are easily cleaned. In fact, all the internal fixtures should be made moveable, thus facilitating the frequent cleaning the house must necessarily get. Filth and its companion, vermin, cause more mortality than all other agencies combined. Conveniences reduce the labor of cleaning to a minimum. When the habit is once formed of cleaning the poultry house as regularly as the horse and cow stable, the work is comparatively light.

Location is an important point for a poultry house. If not dry better discard it at once, or provide measures to make it dry. Thus in choosing locality it is well to place buildings where no water will cause dampness. A gentle slope to the south or southeast is very desirable, and protection from the north wind. Do not place buildings in a hollow where water will back up. The floor of the building should be at least several inches above the highest surrounding soil. To insure sufficient dryness, a gravelly soil is best. Soil for the yards that will raise nothing else is not the most suitable. Such a soil may be sufficiently dry, but laying fowl require in the runs not only room but vegetation. A plot of fresh alfalfa pasture gives better results for a yard than ten times the size where nothing will grow. Shade in the run is very essential.

Most farmers are already permanently situated, but persons who are looking for a location should, other things being equal, settle as near as possible to their market, not only to save freight and express, but to get the produce on the market in the best possible condition.

The essentials of a poultry house may be summed up briefly under sunlight, fresh air, and warmth. The sun is our best disinfectant. The windows of the poultry house should be so arranged that the sun will see all the floor space during the day. Windows should come within two feet of the floor and extend to the same distance from peak, large enough to contain about one-third front of house. If there is a curtain before the roosting quarters it should be lifted during the day and the sun allowed to penetrate every nook and corner of the roosting pen.

Fresh air is very essential for the laying stock. Houses should not be built to admit the fresh air through cracks, forming draughts, but admitted so that the air can be changed in the house at will. One of the best ways of accomplishing this is to have the windows so arranged that they can be opened every day. In the winter an hour or less would probably be sufficient, but it is essential, even in cold weather, to allow the house to be purified by ventilation.

Poultry houses should be built so that the fowl will be comfortable, for no animal can do its best if it is uncomfortable. Artificial heat need not be resorted to. Aim to keep the temperature as even as possible day and night.

For this purpose it will be necessary to contrive some simple arrangement that will substitute during the night the heat that the sun and exercise provided during the day. To allow the fowls to roost in the same pen they have been exercising in during the day, without any extra covering, is not wise. It is not the cold days, but the cold nights that keep hens from laying. Then if they can be made more comfortable at night by means of a curtain or board partition or anything else, let it be done. An up-to-date farmer's poultry house should be one with plenty of room, light and sunshine, fresh air without draughts, moveable fixtures, convenience, built for comfort according to modern plans to suit his purse.

A. T. H. F., Chatham, Ont.

BREEDING WHITE BIRDS WHITE AND KEEPING THEM WHITE.

I have been breeding the white varieties of poultry for some twenty-four years, and breeding some fine white ones, too.

The varieties have been White Rocks, which I am not now breeding, White Wyandottes and Single Comb White Leghorns. These last two I am breeding yet.

There has been much written about giving white birds white corn instead of yellow, as it has been claimed that yellow corn would help to or of itself turn the feathers

have poor legs it is easy to heed good color. But a good bird is one that has the yellow where it belongs and on nowhere else.

There are a few birds that grow so white that you can put them anywhere and the feathers will be white and the legs yellow. These, if right in all part, or as near right as we can breed them, are the extra valuable birds and are the one or two in a hundred. But there are a fine lot of show birds that as they run in the sun are white as the snow as they finish feathering. But if these birds are taken from the direct sunlight, I mean each feather that grows in the winter shade of a room, will be yellow from the tip to the skin. I first saw it about five years ago. We, as usual, had a bunch of nearly grown White Wyandotte cockerels when winter came about December 1. They were out on the farm, where I keep nothing but White Wyandottes. I came out to get some birds a few weeks later and saw a feather that was yellow in amongst pure white ones in back and on the wings. I said to the man who lives there, how is this. Why, that is putting them out of the sun in this rather poorly lighted room. And so it was and is. Many have written that the sun will cause feathers to turn brassy. Not a bit of it until they are dead the following summer, then they will turn yellow perhaps.

I had a big five-pound S. C. White Leghorn I sold for a show last January. He was extra large and fine in every way. Not a yellow feather and fine leg color. I sold him

"RED JACKET."

R. C. Rhode Island Red cock, first prize winner as cock, also winner of shape special at Buffalo, N. Y., December, 1907. Owned by Frank Churchill Sibley, South Bend, Ind., who breeds birds of the highest quality. Get his prices before you buy.

yellow. This I never could believe and have proved that it is not so, although it has been a good excuse for a man when he has failed in his mating to blame it on something else, although no man can say I blamed it on the corn if any yellow ones were found on my place. It is harder to find brass for some years than white feathers in my yards.

The point has been proven that corn does not change the color, but it is in the breeding. I will not say more to prove it, but will touch on another matter that I have found out, that I have not seen touched by any writer. If they have written of it I have overlooked it.

It is this, that white birds kept from the sun will have a lot of unripe feathers. They will have the sap of the feather yellow but not a particle of brass.

There are two kinds of white birds. Birds so white that the yellow pigment is almost all gone from the blood. Most of these, yes, almost every one will have poor leg color, as the same color that yellows the new feathers in some, is the same color that makes the legs yellow. And when you

and heard no more from him for about six weeks, when the man wrote he was brassy. I could not believe it, but he was sick of him and I traded him back for White Wyandottes. When he came he had two, mind you, two yellow feathers in one wing bow, and about six in the other, and one here and there in his back. All that had grown since I had sold him. On account of his comb, I suppose, he had been kept in a room ever since I sold him and there was not enough sunlight to ripen the feathers that grew after I shipped him. I have him yet and he will go to a good show this coming month and will give a good account of himself.

These are facts, and cannot be gainsaid, for I know my ground. In our climate the very best place to keep white birds is an open shed facing the south. A healthy Leghorn cockerel will stand a temperature down to zero when not in a wind, and we never get cold winds from any quarter but the north, so they are safe in a shed, and the open shed is the very healthiest for vigor as well.

Subscription 50 Cents a Year—5 Cents a Copy of all Newsdealers. Chicago subscriptions 60 cents (when delivered by carriers). Foreign subscriptions \$1.00. Canadian subscriptions \$1.00.

Look at the date upon your wrapper. Many subscribers write to ask when their subscription expires and many complain because we discontinue sending the JOURNAL at the expiration of time for which it is paid. The date when your subscription expires is found on the wrapper each month.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide circulation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

Advertising rates are sent upon request.

GUARANTEED SUBSCRIBERS.

With each subscriber to our publication we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within two weeks from the date of any unsatisfactory transaction, with proofs of the swindle and loss, and within two months from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser he said, "I saw your advertisement in the American Poultry Journal."

The Chicago Poultry Show

The Chicago poultry show departed radically from its custom of years, it being held December 15-19, 1908, instead of the last week in January, as the Coliseum could not be secured for any other date.

In spite of the fact that this was only a five-day show and that Thursday, which should have been its "big" day, was rainy and disagreeable, it was a financial success.

The Coliseum in which the show was held this season offers many advantages over the previous location of the show. It was splendidly cooped, the coops being the property of the association.

There were over 600 more exhibits than last year, entries being made from the far East, West and South. Chicago, owing to its central location, draws the patronage of breeders from more states than any other show in the country. The pigeon show was the largest ever held in the United States. The management fell upon the shoulders of E. J. W. Dietz, its president, and he is entitled to congratulations upon its success. While Mr. Dietz has been connected with the show for some time as a director and vice-president, it is the first time the entire responsibility has rested upon him, and to

so successfully pull off such a large event is a splendid testimonial to his ability.

K. J. Muir is the new treasurer. For years he has been superintendent of the pigeon department, but this time he exceeded all previous efforts and made the high-water mark for pigeon shows.

A Great Lesson From a Poultry Display

One of the points of interest at the recent Chicago poultry show, held in the Coliseum, December 15-19, was the splendid display made by Ernest Kellerstrass, of Kansas City.

Last season Mr. Kellerstrass exhibited his White Orpingtons, winning many prizes. This season he decided not to enter his birds in competition, leaving a clear field for his many customers.

Ever ready to see the advantages of publicity to increase the interest in the variety in which he is interested, although not competing this season, he did not hesitate, at an expenditure of time and money, to present his birds in a favorable light.

Mr. Kellerstrass secured a large space among the concessions on the west side of the Coliseum, where in a cleverly arranged manner he had Peggy, his \$10,000 hen, and several score of valuable representatives from his yards. Peggy occupied in the center of the space a large exhibition coop suitable to her dignity and importance. The coop was lined with a hundred or more premium badges, won at shows all over the country by herself and her family and other representatives of Mr. Kellerstrass' yards.

Banked around her on three sides of the space were uniform exhibition coops, containing the scores of White Orpington prize winners, that made up the balance of the display.

It is difficult to estimate the value of such a display, not only to the breeder but to the poultry business in general, as well as the advantage to the show where such displays are made.

We would like to see more of such exhibiting of high grade stock. No argument is needed to demonstrate the value of this to the breeder. Poultry shows should solicit and encourage displays of this nature, setting aside a space for them.

Poultrymen sometimes lose sight of the fact that publicity or booming of any one variety is a "boost" for the poultry business in general.

Mr. Kellerstrass has again demonstrated that he is a past master in the art of publicity through his novel and valuable exhibit of his White Orpingtons at the Chicago show.

Madison Square's Place in Poultry Affairs

Recent dispatches in the daily papers announce that Madison Square Garden, the home of the poultry show and kindred big enterprises, and probably the largest and most widely known building in the country devoted exclusively to public entertainments, is likely to be lost to New York City as a public amusement place. The stockholders of the company which controls the garden have decided to place the entire block occupied by the big and architecturally beautiful building on the market. It is to be replaced by an office building.

Madison Square Garden was built nearly twenty years ago and has been the scene of numerous festivities of big

public import in that time, including the annual exposition and "shows" of various sorts. It has never, it is stated, been a paying venture.

This news coming from New York is of so much interest to poultry exhibitors, raises the general question whether it is not a legitimate function of a municipal government to provide a great indoor meeting place for the use of its citizenship. Private management of such an institution seems to prove that it does not produce a "living" profit. Yet its existence is such a tremendous advantage to the public that its maintenance might well be worth the expenditure of some public moneys.

Madison Square Garden holds a peculiar position in the hearts and minds of poultrymen. We do not speak of a "New York City winner," but of a "Madison Square winner." An entry or winning at "Madison Square" carries with it an honor for its owner with the positive assurance that every one knows where the exhibit was made and the prize secured. It will take years for a new building or location in New York City to create such a unique personality as attaches to Madison Square Garden.

Mr. Rigg Not a Candidate

Iowa Falls, Iowa, Dec. 21, 1908.
To the Editor American Poultry Journal:

I have been presented with a petition, signed by a large number of members, asking me to stand as a candidate for the office of secretary-treasurer of the American Poultry Association.

I am not a candidate. Furthermore, I positively will not be a candidate. I want to make this as emphatic as the English language will allow.

In the measure of devotion and loyalty to friends and duty I yield to no man, but in this case I must be allowed the privilege of saying no.

Thos. F. Rigg.

Our Colored Cover

On the cover of this month's issue we present to our readers a pair of Columbian Wyandottes in natural colors. This, we believe, is the best picture of this fowl ever produced. The Columbian Wyandotte has made rapid strides in public favor during the past few years, and is now one of the largest classes at nearly every show. They are a very handsome fowl, and an excellent utility bird, and no one will make a mistake in taking up the breeding of them.

Echoes of Everybody

After looping the circle to the Pacific Coast, M. S. Gardner, halted at Chicago long enough to see some of the chicken sights in the Coliseum. Some of the boys said he was going to make a showing at K. C. (in fact, I heard this several times) of the real thing in Barred Rocks, but let him come; there are a good many waiting for just such a chance.

Who missed Miller Purvis more than we of the old guard who make Chicago annually? And Miller put in no excuse, either.

Mr. and Mrs. Tom Rigg spent the week in Chicago, while Tom judged some and told the boys about his bee farm and

how they mint money from blossoms bathed in dew and—well, we can't finish to suit McGrew, so hesitate to get flowery.

Dave Heimlich dropped through the skylight for a moment or two, in order to put out a few feelers for his pet—the Association for the Prevention of Abuse to Poultry Judges—or whatever it is. Dave generally sees Chicago when she's in her hen garb.

Say, beau, take it from Yours-on-the-level, those journal men certainly put the chills through you with their glassy eyes. You cannot get away from them, no matter what you reply to their aggressions, nor will pepper on your trail throw them off the cent.

Theo. Hewes never missed a Chicago show and says he never will until he gets hauled away in the glass wagon—and that is putting it strong. Theo. is optimistic and radiates a good brand of bloom dispenser no matter where he is.

Jaëquins seems as much at home in Chicago as in New York.

McClave is one of the old standbys at the show.

Russell F. Palmer, of the West, made his presence felt after he had run a few heats for goodly contracts.

Grant M. Gurtis was one of the absent ones. It has been a long time since he was west, but somehow he missed connections and the walking was poor.

Those flashlight fellows were certainly doing business with their boom-guns. Talk about making smoke! were they not there with the material?

Ralph Root and his specialties were thronged about from opening to closing of the show and Ralph likes to tell them some new things, too.

Dick Richards made a home run look like little pumpkins with all his drafts, greenbacks, cash, contracts, cheeks et al. Dick is squeezing some of the good things out of life.

Speaking of pigeon men, why not have asked Milwaukee down en masse? They are a live set of wires, so keep hands off unless you care to be shocked.

Charley Ring is off and nothing can catch him except a column in the R. P. J., which might or might not puncture his boom.

Brent, of Dartmoot, or Dart, of Brentmoor—we know not which it was, is, or ain't; but he's a good Indian all the same.

Fred Kimmey put in a few hours at the show and caught the drift of matters he was interested in, and then, after presiding at a couple of love feasts, left for parts unknown.

Here's to Huey-Templeton-Victor, and especially Templeton. The fowls from Cornwall were again heard from and he is one of them to blame.

Dietz was everywhere. No matter what needed straightening out you found him on the spot. E. J. W. should have a big

vote of thanks from all the henists in the land.

Stoner, from Kansas, was on hand, but the Indian from the valley of the Kaw had an ax to grind at Hutchinson and could not sharpen two bits at one time.

John D. Prideaux is still doing some good work in breeding Partridge Cochins bantams. His exhibit this year was particularly fine.

In the Light Brahma classes Mrs. Cornwall River Home Poultry Yards, Mr. Walter and Kreider and Toby were all out strong cutting the ribbons up considerably.

J. C. Knapp and W. M. Sawyer were runners up in the Indian Runner display.

From out in Iowa John Batchelor and son sent in some good Pekins.

One exhibitor, R. R. Conklin, in the White Indian classes, but some good birds nevertheless.

R. A. Hewes and Anthes, Bradley & Co., had things about to themselves in Black Langshans.

Teektonius, King and Cregar ran things to suit themselves in the Single Combed Buff Leghorn alley.

Lloyd Mishler, Clark and Didricksen carried things with a high hand amongst Rose Combed Black Minorcas.

Over in the Rhode Island Red both Rose and Single Combs were a red hot proposition. From K. C. came Uncle Tom Southard and pitted against each other in the Single Comb classes were Dr. Lawton, Buell, Roundtree, Klein and Osburn. In Rose Combs, Sibley, Cherry Red, K. and W., Ewell, Blanchard, Beck and Halbach were after the ribbons.

What do you think of Partridge Rocks now, since Nofztger and Hageman made such a showing?

The Aristocrats were plenty in the Polish isles.

Your Uncle Franklane L. S. was a mighty busy individual.

A. and E. Tarbox and James S. Wason, flanked by Carver and Avey, Fred Rolph, Bergner and Stonnard, had a jolly tussel in Silver Wyandottes.

Illinois sent the largest delegation, as was to be expected. But did you take note of that smile of self-content that hovered over the face of Dan Palmer?

MacPierce came up from some little pumpkin show down in the tall weeds for a few fleeting, all too fleeting, hours that he might drink at the fountain of the best in roosters.

They do say that it is against the written law to borrow roosters for a show, no matter what the color of their plumage or their previous condition of

Poultry Secrets Disclosed!

Is this book properly held? "Poultry Secrets" tells you how to carry fowls, and scores of secrets far more important and hitherto unrevealed.

Poultry Secrets Every successful poultryman knows important facts he never tells. They are peculiar secret methods and records of discoveries he has made in his work with chickens. Some of these he does not regard of sufficient importance to tell, and others he guards with extreme care. They are the foundation of his success and a valuable asset of his business.

We Will Tell You These Secrets

Every secret printed in this book has been obtained in an honorable way, either by permission of the owner or through the experience of Mr. Boyer, our Poultry Editor, who writes the book, and who is one of the ablest Poultry men of the country.

I. K. Felch's Mating Secret

One of the best-known figures in the poultry world is I. K. Felch. Certainly success has crowned his efforts as a breeder of blooded stock. Many years ago Mr. Felch published his breeding chart, but later, realizing its value, he withdrew it and kept the information for himself. He has now given us permission to use this information, and it is included in this book.

Secret of Fertile Eggs

Boyer's secret of securing fertile eggs by alternating males we believe is worth \$100 to any big producer of setting eggs. It is something new, and the diagrammatic illustration furnished by Mr. Boyer makes the matter so plain that the novice can easily understand it.

The Secret of Feed at 15 Cents a Bushel

An enterprising poultryman has been advertising this secret for \$5.00 and pledging those who buy it not to disclose it to anyone else; it has, however, long been known to a few poultrymen, Mr. Boyer among them, and the method has been fully explained in "Poultry Secrets."

We Will Pay \$10.00 For Any Secret Not in the Book

provided it is practical and valuable. See conditions of this offer on last page of "Poultry Secrets" when you get it.

Poultry Department of Farm Journal

FARM JOURNAL for thirty years has conducted a poultry department known the country over for the ability of its editors and the value of its contents.

FARM JOURNAL of Philadelphia is the leading farm paper of the country. It is clean, boiled down, cream, not skim milk. It treats topics in season, is written by practical men and women, who know when they have said enough and quit. Its poultry department is strong and ably conducted, and its garden, orchard, household, stock, dairy and other departments are invaluable equally to the expert and beginner.

OUR OFFER: We will send a copy of "Poultry Secrets" and FARM JOURNAL for 5 years, both for only **\$1.00**

And to every one who takes advantage of this advertisement before February 1st, we will send also a copy of the **Lincoln Farm Almanac**, filled with Lincoln stories and helpful matter, for 1909.

WILMER ATKINSON CO.,

1248 Race Street
PHILADELPHIA, PA.

We Are Willing to Name Some of the Secrets Here.

- 1 Burnham's secret of mating fowls.
- 2 Felch's method of breeding from an original pair, producing thousands of chicks and three distinct strains.
- 3 Mendel's Chart of Heredity.
- 4 Secret of strong fertility by alternating males.
- 5 Secret of knowing what to feed and how to feed it. The secret of having green food in winter.
- 6 Secret of sprouting oats and barley for poultry feeding.
- 7 Secret recipes for chick feed; practically the same as is now sold on the market at a high rate.
- 8 Secret of fattening poultry economically, so as to make the most profit out of the crop.
- 9 Secret of having healthy fowls without use of drugs.
- 10 Secret of telling the laying hens of the flock.
- 11 Secret of detecting age in stock.
- 12 Secret of knowing how to judge dressed poultry.
- 13 The only safe way of preserving eggs.
- 14 A secret of dressing fowls so as to do the work quickly and thoroughly.
- 15 The fancier's secret of preparing fowls for exhibition.
- 16 An exposure of the methods employed by some fanciers to kill the fertility of the eggs.
- 17 The secret of celery feeding to flavor the carcass in imitation of the canvas-back duck.
- 18 Scaleg-leg treatment—a remedy that really cures.
- 19 The winter egg crop and how to get it.
- 20 How to create the ideal roasting fowl.
- 21 Fattening turkeys for market.
- 22 Hunter's Secret of Success.

servitude, but what if some roosters could talk and would?

* * *

J. Coy Roach, without a reproach, hauled off ribbons in a coach.

* * *

Schilling was drilling to coops of the winners, making and taking them for a few tenners.

* * *

Turn that man Potter loose in Kansas and let him make a few speeches on his little box and you could elect him sheriff in ten days, provided the gasoline held out while the voters were being autoed to the polls.

* * *

Peggy, not from Paris, but K. C., was out in her festive garb for to see the good people. Her gold leg band and her cut glass drinking fountain were there, too. Did the people talk? Read the papers.

* * *

Mr. and Mrs. Kellerstrass and family spent the week at the show. They are real fanciers.

* * *

Joe Coleman thought it a great show, and he handled enough Black Orps. to make any ordinary man grow dizzy.

* * *

They say that at Chicago there is a movement on foot to change the name of Orpingtons to Byringtons. Any truth in this, C. S. B.?

* * *

J. Fred Schureman—no, J. F. Schureman—no, I mean Fred, is looking better than usual.

* * *

Bob Hager was out after them again this year and got one or two little scalps hanging to his belt for his pains.

* * *

Miller was down in the White Rock class pretty strong and scored a time or two without a great deal of effort.

* * *

Charles D. Cleveland, of E. O., N. J., showed a creditable string.

* * *

F. L. Waterman & Son opened a few eyes in the Buff Wyandotte alley.

* * *

H. H. F., of Clement & Fike, was in White Wyandotte aisle some little time.

Owing to the Canadian quarantine, Canadian fanciers will be unable to exhibit at shows in the United States this season. This is to be deplored, as there are some good birds being produced in that country, and a number of fanciers have been showing winners at some of our leading shows during the past few years.

—o—

NATIONAL WHITE WYANDOTTE CLUB MEMBERS, ATTENTION.

The State Cups will be offered at the following shows. Medals at all shows making application:

Connecticut at Meriden, December 29-January 1; Illinois at Chicago, December 15-19; Indiana at Indianapolis; Kansas at Newton, January 4-9; Kentucky at Frankfort, December 1-5; Massachusetts at Boston, January 12-16; Michigan at Grand Rapids, January 29-February 3; Missouri at Trenton, December 8-12; New Jersey at Orange, February 10-11-12; New York at Utica, December 14-18; Ohio at Toledo, January 19-25; Oregon at Portland, January 13-19; Pennsylvania at Philadelphia, January 19-23; South Carolina at Greenville, January 12-15; Texas at Dallas, January 5-8; Utah at Salt Lake City, January 24-27; Wisconsin at Milwaukee, January 12-17; Vermont at St. Albans, January 19-22; Virginia at Richmond, December 7-12.

West Orange, N. J., December 4, 1908.

A special meeting of the National White Wyandotte Club will be held in connection with the Philadelphia, Pa., show January 9 to 23, exact day and hour to be announced later.

Chas. D. Cleveland, Pres.

F. S. Hawn, Sec'y-Treas.

The club is offering at the Philadelphia show \$100 in cash premiums. All members should, if possible, send some birds to the show.

—o—

BUFF ORPINGTON CLUB.

The 1909 club catalogue of the National S. C. Buff Orpington Club is now ready for mailing. This is the finest catalogue ever issued by any specialty

club, and is of great value to any one interested in poultry.

This book has over one hundred pages, fully illustrated, and contains many valuable articles on Buff Orpingtons from leading breeders. It also gives large ideal drawings of both male and female S. C. Buff Orpingtons.

We are now one of the largest, if not the largest, specialty clubs in America, and if you are a breeder of Buffs and are not a member of our club, you owe it to yourself to join at once. Full information will be mailed you by addressing the secretary. Our 1909 catalogue can be had for less than the cost of postage and printing and will be mailed postpaid to any one for 10 cents per copy. Will H. Schadt, Sec'y.

Goshen, Ind.

—o—

AMERICAN PLYMOUTH ROCK CLUB ANNUAL MEETING.

In addition to the special cash prizes already published, a cash special of \$5 has been received from William Barry Owen, Vineyard Haven, Mass., and C. A. Kellogg, Hartford, Conn. This will insure a specially handsome ribbon trophy for all the specials offered at the Boston show.

The club meeting will be held at 4 p. m., on January 13, and all members, who possibly can, are asked to be present. Matters of great importance to the welfare not only of the club itself, but to the variety, will be discussed and considered. Whether or not the club will issue a catalogue this winter will be decided, and a club quarterly is also under consideration.

Some decisive method of allotting state cups for individual members should be procured. The question of whether the club needs new emblems and new ideal cuts shall also be fully considered, and the matter finally decided. Whether the constitutional provision for dropping members in arrears shall be strictly enforced or not is another question that must be decided at that meeting.

Other matters of vital importance will also be acted upon, and it is very necessary that every member should attend.

A. C. Smith, Acting Sec'y-Treas.

THE CHICAGO SHOW

Fourteenth Annual Exhibition of the National Fanciers' and Breeders' Association held Dec. 15-19, 1908

The annual Chicago show has come and gone, and the only thing that can be said is that it was much like those that have taken place under the management of the National Fanciers and Breeders' Association. A better show than the one held last year at Tattersall's, but no better than those held some years ago at the Coliseum. The number of fowls was a disappointment, but the quality, as a whole, was extremely good. The largest entry was in Barred Plymouth Rocks, where 105 grand specimens were cooped. A close second was the S. C. Buff Orpingtons, with 88 entries. The Wyandotte classes led with 268 birds, and the Plymouth Rocks second, with 206.

Barred Plymouth Rock—Edgar G. Simpson, of Naperville, Ill., had some exceptionally fine specimens; the first prize hen being one of the finest specimens we ever handled, as was also his first prize cock. D. F. Palmer & Son captured first on pullet, with a bird well deserved to win the honor.

Buff Plymouth Rock—Only twenty birds of this variety were cooped. Some good quality shown.

White Plymouth Rocks—Fifty-eight birds shown in this class, which is very few when compared to the large number that has been shown at Chicago in former years. The first cock and first cockerel were fine specimens, as were nearly the whole class.

Partridge Plymouth Rocks—This variety showed up in greater numbers than some of the older and better established varieties, and the quality was good.

White Wyandottes—There were some grand specimens of this variety, and the exhibit of Geo. Rudy, of Mattoon, Ill., attracted a great deal of attention and

also won a major portion of the prizes.

Silver Wyandottes—These were out to the number of fifty-three, but the quality was not as good as former years. Some good individuals, but, as a whole, was not what one would expect to see at Chicago.

Partridge Wyandottes—This class was larger than the Buff, which a few years ago was one of the largest classes at Chicago.

Columbian Wyandottes—Not as strong a class as we expected to see; but some exceptional good quality. The Sunnybrook Farm, West Orange, N. J., exhibited a fine string, and the birds in their first prize pen were easy winners, being specimens as near to standard requirements as it is possible to get them.

White Orpingtons—This class was few in number, but the quality was good. The first cockerel and first pullet were specimens well worthy of the honors they won.

Buff Orpingtons—This was a large class and the quality extra good. The color of some of the prize winners was simply superb. The competition in this class was keen and the judge had a hard task to determine just where the ribbons should be placed.

Black Orpington—Some very good specimens shown, and especially so in females, although the prize winning males were good Orpington shape and worthy of the honors given them.

Rhode Island Reds—A grand lot of birds in both Rose and Single Comb, and competition was close. The winning birds were all fine specimens and worthy of the honors bestowed upon them.

S. C. Brown Leghorns—This class was not as large as one expects to see at

Chicago, but the quality was very good and some fine specimens did not get a look-in at the prize money.

S. C. White Leghorns—This class was a fairly large one and the first prize cockerel and pullet were exceptionally fine ones, as was also the first prize hen. In fact, the whole class, with one or two exceptions, were fully up to standard.

S. C. Buff Leghorns—A fairly strong class with some extra good individuals.

Black Minorcas—Few in number as compared to former years, but quality fairly good.

R. C. Black Minorcas—The first prize cock and hen were exceptionally good specimens. As a whole this class was ahead of that of last season.

R. C. White Minorcas—Few in numbers, but fairly good quality.

Black Langshans—This was a small class, but the winners were grand specimens of this great fowl.

Light Brahmas—The grand old Light Brahma seems to be getting fewer in number each year, and this was no exception. The River Home Poultry Yards showed some fine specimens and won the major part of the prizes.

Cornish Indian Games—Chicago brings out more of this variety than show in the country, and all classes were well filled and competition strong.

Bantams—The different varieties were represented, but the number in each were very few.

Duck, Geese and Turkeys—Some good specimens in each variety, but the number of entries was not what they should have been.

C. S. Byers, Hazelrigg, Ind., breeder of S. C. Buff, Black and White Orpingtons, won, as usual, at the Chicago show. Mr. Byers issues a neat catalog. Send for one.

Wm. Miller, Crescent, Mo., breeder of White Plymouth Rocks, won first cock, first hen and second cockerel at Chicago show. He has several fine exhibition birds to dispose of. Mr. Miller also won cup for best bird in show.

The Best Record at Madison Square New York Show

FOR THE PAST SIX YEARS ON MALES HAS BEEN MADE BY

BRIGHT'S BARRED PLYMOUTH ROCK MALES

Winning exactly as many **FIRSTS** as all their competitors put together. Our females were not far behind last year winning second, as well as the eagerly sought for **FIRST PRIZE PEN**; 37 pens competing the largest class ever shown in New York of this variety.

OUR FEMALES made an unusually persistent winning:—first, third, fourth, fifth pullets at the Jamestown Exposition, and first, third, fifth, seventh at Indianapolis, as well as first pen.

THE LARGEST and Best lot of breeding males we ever had for sale. They breed true, transmitting their own excellent qualities. The brightest color, the most evenly barred, the finest barred, the best shaped and best head points we have ever had are attributes of our pullet bred cockerels this season.

Prices reasonable. Get our record for 1907-1908.

THE BEST CURE

Chickens' Eyes Swelled Shut.

"I consider Germozone the greatest poultry medicine ever placed on the market. I have cured chickens that had roup so bad that both eyes were swelled shut, and it only required two treatments."

F. MILLER,
B. Langshans and M. P. Ducks.
Centerville, Iowa.

The experience of Mr. Miller is only that of thousands of other breeders who have found in Germozone the one reliable cure for this dread disease so common with poultry.

GERMOZONE

is not the product of a month, a day, or a year. For more than 12 years it has been the standard medicine of the poultry world and the fact that it is more popular today than ever before is the best proof of its real value.

Germozone is a germicide, a bowel regulator, a system builder. It goes to the seat of the trouble and effects a sure and permanent cure.

Given in the drinking water twice a week it cures disease, prevents contagion, and keeps the fowls in a healthy, vigorous condition. Prepared either in tablet or liquid form and will be sent, postpaid, on receipt of price.

Germozone is the best health insurance you can have for your poultry. Cost is small, and it is sold on an absolute guarantee.

Price 50 cents.

forms us that he has four hundred White Plymouth Rocks he wishes to dispose of at reasonable prices. Mr. Halbach won first cockerel and first pullet, including several minor prizes, at the late Chicago show.

C. A. Hamilton, Plymouth, Ohio, breeder of Columbian Wyandottes, entered five birds at Chicago show and won on every one, namely, first and third cockerel, second hen, first and third pullet.

Geo. Rudy, Mattoon, Ill., breeder of White Wyandottes, won every first at the late Chicago show; also several seconds and silver cups, something never accomplished in the history of the Chicago show.

A. W. Blanchard, Beloit, Wis., exhibited Rose Comb Rhode Island Reds and won third hen. His cockerel was fine in color, but was not quite developed. Will no doubt be heard from later.

Among the prominent visitors at the show were: Wm. Miller, Crescent, Mo.; A. G. Clark, Cleveland, Ohio; Dr. Geo. W. Taylor, Orleans, Ind.; Fred Alger, Waukan, Wis.; R. J. Belsley, Peoria, Ill.; C. S. SAFE
BROWN HEAVY WEIGHT
POULTRY FENCE

Does Not cost one-half as much as the Common Chicken Netting, yet will last five times as long.

Size of Wires. The top and bottom wires are No. 9 gauge—same size as nearly all stock fences. Intermediate and stay wires in same proportion.

Quality of Wire. All material used in Brown Poultry Fence is best grade of High Carbon, Double Strength Spring Steel Wire. The galvanizing is the heaviest and best possible. All wire is subjected to careful inspection and acid tests before being made into fence.

Construction. Very closely woven, and a sure protection against marauding animals. Your poultry is safe from everything when enclosed with Brown Fence. Built of material heavy and strong enough for horses and cattle. Wires cannot possibly slip.

Saving in Cost. With a No. 9 top and bottom wire you can save at least one-half the posts, and besides you require no top railing or bottom boards. These items alone usually cost more than the fence.

Price. Our prices are less than common netting costs. WE PAY THE FREIGHT and guarantee safe delivery to your nearest railway station.

Guarantee. We guarantee every rod of our Poultry Fence. Every customer who buys this fence and does not find it entirely satisfactory and fully up to his expectations is at liberty to return the same at our expense.

Before buying Poultry Fence get our catalog and investigate the many superior qualities of our fencing. We have 150 styles of fencing—a fence for every purpose. Write today.

THE BROWN FENCE & WIRE CO.,
Dept. 3 CLEVELAND, OHIO.

A SAVING Of One-Half
on your poultry fence by using a lesser number of posts and no top or bottom rails. A 4-ft. fence without top rail is as good as a 6-ft. fence with top rail.

M.M.S. POULTRY FENCING saves 50%. It will not sag or bag, has 1 1/2-inch mesh at bottom. A cable every foot in height, giving additional strength. Write us, we will tell you about our poultry, field, hog and lawn fence; also our Ranger Tumane Revolving Barb Wire.

DE KALB FENCE CO.,
De Kalb, Illinois.

The Quarter-Centennial or "Jubilee Year" of Page Fence

Just 25 years—a quarter of a century ago—the first Page Fence was sold. It was woven by hand, in a little old wagon shop near Rollin, Mich. Today Page Fence, from raw material to finished product, is made in our own mammoth steel plants and wire mills, and known and used throughout the civilized world.

Page Fence "Jubilee Catalog" Free

We want every farmer, every dairyman, every ranchman, every poultryman in the country to write for the great "Jubilee Edition" of the Page Fence Catalog. It tells more important Fence Facts than were ever before printed in any catalog—explaining fully the process whereby Page Fence is made 50 per cent stronger, more elastic and rust-resisting than other wire fences. It will prove conclusively that Page Fence, though costing a trifle more than ordinary fence, is the most economical to buy and use. Address

WORTH ITS WEIGHT IN CHICKS

Every poultry man knows that a large percentage of his chicks die from bowel troubles. Many know from actual experience that

MEDICATED CHARCOAL

not only prevents this trouble and saves thousands of chicks each year, but positively prevents or cures cholera, diarrhoea and kindred diseases in older fowls. It cleanses the bowels, purifies the blood, kills germs of disease. We guarantee satisfaction. It is the only remedy ever discovered for the cure of "White Diarrhoea." It is a scientifically prepared remedy in use on the largest poultry plants throughout the country. Guaranteed under Government Pure Food Laws. Trial bags, 10 lbs. \$1.00—25 lbs. \$2.25—50 lbs. \$4.25.

Des Moines Incubator Co., 269 Fourth St., Des Moines, Iowa

Let Me Save You \$4.15 on an Incubator

J. V. ROHAN, Pres.

—Not just a printed promise, but a fact—I can save you all of \$4.15 over the next lowest price of any incubator of equal size; freight prepaid. And I'll guarantee it to be the best chicken-hatching, money-making incubator you can get at any price.

Fire-Proof Belle City Incubator

Freight Prepaid

is sold entirely at my risk. My liberal guarantee gives you 30 days' trial. It has double walls and dead air space all over 12-oz. cold rolled copper tank and boiler. Safety lamp and lamp support, self-regulator, deep nursery, strong egg tray, thermometer, egg tester, etc., complete. The Belle City Brooder—hot water heat —is the only brooder that has double walls and dead air space—a rare bargain, too. So get my factory-to-you prices now—see how much you will save. My interesting book, "Hatching Facts" for 1909—mailed free. Write for it today. Address

Belle City Incubator Co., Box 27, Racine, Wis.

How To Raise Them? That's the question!

Nearly every person can hatch chicks with hens or an incubator, but very few can raise the chicks. Very few know how to get them through the chick period to the dollar bringing time. Very few know how to make money by raising poultry. But there is big money in poultry and we can tell you how to get your share.

"CHICK CULTURE"

Dr. A. A. Brigham, the acknowledged poultry authority, has written a wonderful book, entitled, "Chick Culture." It covers everything from the egg to the mature fowl. It tells among other things how to hatch chicks successfully; how to quickly develop them; what to feed them and how to feed; how to construct serviceable, inexpensive houses and furnish them at little cost. It is plainly written, easily understood. It is full of practical poultry knowledge from cover to cover.

Invaluable to any one who will follow its practical teachings. A full size book which thoroughly covers the subject of chick culture from beginning to end.

BIG SPECIAL OFFER

\$1.75 and "Chick Culture" For \$1.00

POULTRY HUSBANDRY is a leading poultry monthly magazine, edited by men well-known to the profession, and contributed to by leading experts. It is always well-printed and profusely illustrated. A year's subscription is 50 cents.

FARM PRESS is published monthly, 160,000 copies and edited for the farmers all over America. Every farmer, big or little, should read Farm Press. Its many departments make it interesting to every one on the farm. One year, 25c.

GREEN'S FRUIT GROWER, a high grade monthly magazine for the fruit growing farmer and his family. Owned and edited by Charles A. Green, one of the greatest Horticulturists of the day. One year, 50c.

VICK'S MAGAZINE, for over 30 years has been recognized as one of the leading family journals. It goes to over 100,000 homes every month. Every issue is a special number and its several departments are always of interest to every member of the arm family. It especially appeals to the women and young folks. One year, 50c.

"CHICK CULTURE", the great poultry book, needs to be seen to be fully appreciated by the poultryman who needs help and advice with his chickens. It covers poultry raising from A to Z. Its information is clearly told and logically arranged so as to be easily found. "Chick Culture" is worth a gold dollar to every poultry raiser, even if he has only a very small flock.

SPECIAL NOTICE

An arrangement has been made which admits of the above liberal offer being made the readers of this publication. It means that you will receive for the low price of \$1.00, one of the very best poultry papers in the country, a high grade farm paper, a horticultural, and a home magazine, all for one full year, and a copy of Dr. Brigham's book "Chick Culture." This is one of the most liberal offers ever made. Take advantage of it now. Send remittance of \$1.00 in any convenient way to

Hawkins Publishing Company, Dept. Waterville, N. Y.

P. S. The above special offer is open to our old subscribers to **POULTRY HUSBANDRY** as well as new ones. Send us your order at once and we'll advance your subscription one year.

AS THEY SEE THEM AT NEW YORK.

Duston's W. Wyandottes

Have for years sailed ahead of all others. New York, the royal battle ground of the country, the scene of many victories, proves my story true that my stock wins. If you want breeders that are right and will produce "the goods," show birds that can win, write to Duston. He has them. Beautiful illustrated catalog, 10 c. The breeder that has made possible the world's best flocks.

ARTHUR G. DUSTON
BOX 1020 SOUTH FRAMINGHAM, MASS.

Another 75 Cent Combination

THIS SEASON we are going to give our readers their money's worth, even though we don't make a cent, and in keeping with this determination we have just made arrangements with the publishers of Farm Journal, Philadelphia, Pa., whereby we can make the following offer:

American Poultry Journal ^{One Year} } **For Only**
FARM JOURNAL Five Years } **75c**

And in addition each subscriber will receive a copy of a Lincoln Farm Almanac for 1909, one of the most interesting ever issued, and will contain new and old stories and anecdotes of Lincoln, his boyhood on the farm, later life, some of his best stories, his own account of his life, famous sayings, his wonderful Gettysburg speech, a brief account of his death, and other matter. This is illustrated with original drawings done especially for this work.

Twenty-four pages are devoted to matters of interest to all farmers, including a new and complete spraying table for fruits and vegetables, a planting table, cubic, square and long measures, table of weights, rules for curing dried beef, Smithfield hams and other meats; household recipes, directions for canning and preserving; how to have good roads, a complete list of Farmers' Bulletins published at Washington, list of Experiment Stations for all states, etc.

This is a Combination of two of the Oldest Magazines of their kind in the Country

American Poultry Journal is the oldest poultry publication in America, and contains more valuable information for poultry raisers than any other paper published in the world. In addition to this there will be five more of those handsome full-page colored plates of poultry inserted during the coming season, any one of which is worth more than the price of a year's subscription.

One of the special features of American Poultry Journal this season is the continued story of the Walling Family and their experience in the poultry business. Much valuable information for the amateur is given in this story. There will also be many new features added from time to time, which will always keep American Poultry Journal at the top.

The Farm Journal is a National agricultural magazine, published monthly in Philadelphia, Pa., U. S. A. In circulation and influence it is unquestionably the foremost farm paper in the world. It goes each month into more than five hundred thousand homes in the United States, Canada, Mexico and foreign countries, and is regularly read by nearly three million people.

The Farm Journal was first issued by Wilmer Atkinson in March, 1877, and has been published continuously by him to the present time. It consists of from 32 to 60 pages, according to the month. It is printed on good white paper, in large clear type, and is fully illustrated.

The high quality and practicality of the Farm Journal, together with the very low price of subscription, make it the most remarkable value among American periodicals.

This offer is for both new and renewal subscriptions. Cut out the coupon and send in your order today. Address all orders to

American Poultry Journal Pub. Co.
113 South Clinton Street, Chicago, Ill.

American Poultry Journal,
 Chicago, Illinois.

Gentlemen:—Please find inclosed 75 cents in payment for one year's subscription to American Poultry Journal and Farm Journal.

White China Geese—Charles McClave, 1st cock; 1st hen; 1st cockerel; 1st pullet.

THE ST. LOUIS SHOW.

St. Louis did herself proud this year and the association is to be congratulated for the manner in which the show was conducted.

St. Louis turned out a large attendance and on three occasions the hall was taxed to its utmost capacity. The keen interest taken in the purchase of fine birds by prominent St. Louisans was surprising. Many exhibitors returned home with empty coops, declaring that their entry would be larger next year.

Mr. Louis Rausch, Creve Couer, Mo., had a fine string of Barred Rocks, winning first and second cock and several seconds and thirds. His second prize pullet was a high-class specimen, but

RICHARDSON'S BARRED P. ROCKS

Greatest Strain in America. Again show their superior quality by winning at all the leading shows. Five hundred fine breeders for sale. Send for circular.

F. W. RICHARDSON, . . . Box A, HICKSVILLE, OHIO.

If you do, I will quote you a special factory price on an Incubator and Brooder that will surprise you. I want every man or woman who raises chickens or who thinks of going into poultry for profit, to get my 1909 offer and book and learn the remarkable value I am giving in my

Racine Incubator

Fire-Proof—Freight Prepaid—30 Days' Free Trial

It has every real improvement—many exclusive points of merit. Is the result of 27 years of practical experience of the oldest incubator inventor and operator in the country.

This practical experience of this practical man is yours free with the Racine Incubators and Brooders, insurable, for your safety and protection. Guaranteed to hatch more and healthier chicks, under same conditions than any other machine made. I also make the best Hot Water Brooder—priced proportionately low.

But write today for my "Book About Incubators" and special factory prices.

Write me personally—G. C. Wheeler, Mgr.

Racine Hatcher Company,

Box 26

Racine, Wisconsin

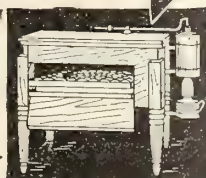

The Simplest—Most Economical and Most Successful Incubator

Don't buy any incubator—before you get my catalog, I want to show you why Gold Medal Incubators hatch every fertile egg. I want to tell why beginners succeed with Gold Medal Incubators as well as old timers. Just write me a postal—and I'll send you this interesting catalog—Free Prepaid.

Gold Medal Incubators

have the most perfect heating and ventilating system of any incubator. They use less oil—and their simplicity avoids all beginners' troubles. Being practically automatic—very little attention is required. All explained in my catalog—write for it today. A postal will do.

F. R. GREEN & CO., Dept. F, Lake City, Iowa

was not quite matured. W. W. Henderson was also successful in this class.

E. L. Delventhal, Warrenton, Mo., was there with his Buff Plymouth Rocks, winning several prizes.

Henry Steinmesh, as usual, won on Silver Wyandottes.

Manverse & Rasch, Trenton, Ill., showed a fine string of White Wyandottes, winning, as usual, several prizes.

George Hartley, Trenton, Ill., won several prizes on Single Comb and Rose Comb Rhode Island Reds.

Kaufman and Windheim, Nutley, N. J., who perhaps have shown more this season than any other one exhibitor, won, as usual, on R. C. Rhode Island Reds.

In the Buff Leghorn class Max Gackel, Kirkwood, Mo., won every first and several other prizes.

Elmer V. Shultz, Webster Grove, showed some high-class S. C. Brown Leghorns, winning several first prizes. Judge Shove stated that the first cock bird was the best he had seen this season.

It was impossible to get a full list of the winners. The carbon copy of winners, which was furnished us by the secretary, we consigned to the waste basket, because we were unable to decipher it. The awards were placed by Daniel P. Shove, Fall River, Mass.; T. M. Campbell, Darlington, Ind.; John Hettich, Bowling Green, Mo.; V. J. Muir, Chicago. Among the prominent visitors were T. E. Quisenberry, Slater, Mo.; Mr. and Mrs. Wm. Miller, of White Rock fame; C. A. Morton, C. H. Manverse and Geo. Hartley, Trenton, Ill.

DOWS, IOWA.

The Dows Poultry and Pet Stock Show, Dows, Iowa, January 19-22, gives promise of being the big late winter meet of northern Iowa. Nearly \$400 worth of valuable specials, including six handsome silver cups, an incubator, a brooder, and specials ranging from \$50 to \$75 in value, on the different breeds. No strings in number of entries. Nothing reserved for association members. Judge D. E. Hale will score the birds and award the premiums solely on merit. The best bird gets the honors. Regular cash premiums guaranteed in full.

They have secured Prof. H. C. Pierce, of Ames, Iowa, and the judges, Mills and Hale, to lecture at a free institute January 20. Your name on a postal addressed to the secretary, J. L. Le, will secure a premium list.

TIFFIN, OHIO.

January 11-16, at Tiffin, Ohio.—Newton Cosh, of Port Dover, Canada, judge. This is one of the very best shows held annually in the middle west. In looking over their price list you will find that their regular and special cash prices are not equalled by any of their rivals. This is their sixteenth annual and they have crowned it by securing the State Buff Orpington Cup, which is a credit to any association. A price list will explain all.

V. Crabtree, Sec'y.

Tiffin, Ohio.

BELLE PLAINE SHOW POSTPONED.

Owing to the conflicting dates of the Cedar Rapids and Belle Plaine shows, the "Progressive Poultry Breeders & Fanciers' Association" has decided to hold its show one week late—February 3, 4, 5 and 6. Indications point to a very successful show at Belle Plaine, with plenty

FERRIS' S. G.

WHITE LEGHORNS

WILL WIN ANYWHERE

They are large, pure white, with perfect heads and low, well spread tails. They have the shape and style that the standard requires, and their splendid record at America's largest shows proves that they will WIN ANYWHERE.

AT CHICAGO last month they won five prizes in the very keenest competition.

AT ST. LOUIS last November we entered two cockerels and two pullets and won three prizes on the four entries. A remarkable record considering how they were handicapped by the smoke and dust of a 500 mile journey.

THE MICHIGAN STATE FAIR was a 2,000 bird show yet we made a clean sweep though the Leghorn class was very large.

AT DETROIT last January, one of the largest shows in the United States, we won eight prizes on ten entries.

AT GRAND RAPIDS we won every prize but one competed for, and more specials than all other exhibitors combined, including one for the whitest bird in the show.

Remember that our birds are bred to PAY, too. They are not weak, unproductive and worthless, as is the case with so many exhibition strains. They are raised on free range and are correctly grown from shell to showroom. You will find them a strain of layers unsurpassed for size, vigor and profit. We have exhibition males at \$5 to \$15, exhibition females from \$4 to \$10, breeding stock at \$2 and \$3. Eggs after March 1st, day-old chicks after April 1st.

All stock is sold on approval. Keep the birds three days and then return them if they are not satisfactory. I will pay return charges and refund your money in full.

I want you to have my new 24-page catalog. It shows unretouched photos of the fowls I sell, and gives a more complete description of my stock, farm and methods than is possible in this ad. Write today. I will send you a copy free, and will be pleased to quote prices on the stock, eggs or chicks you need.

THE FERRIS POULTRY FARM

GEO. B. FERRIS, Prop.

555 North Union, Grand Rapids, Michigan

of good birds for which liberal premiums will be given. Judge W. C. Ellison will place the awards. For further information, address E. M. Ewen, secretary.

THE GREAT WASHINGTON SHOW.

The third annual show to be held in Washington, D. C., January 26 to 30, 1909, by the Columbia Poultry and Pigeon Association, promises in every way to eclipse all former shows held in that city. The management has spared no efforts to make it a success and believes that the fanciers who fail to take advantage of what has been accomplished will make a great mistake both financially and otherwise.

Washington offers unusual advantages for a great National show and the efforts of this association are being exerted, not only to make the coming show a success but also to lay the foundation of a great exhibition to be held annually at the National capital of this great country. This show will be held always while congress is in session and when thousands of visitors are in the city from all over the world. It is believed that such a show should and will appeal to the fanciers in a way that no other show in the country can. He will always be able to visit the capital yearly at its most interesting season, and at the same time exhibit at a show which, because of the wide range of people it is bound to reach, should be second to none as an advertising medium.

An excellent corps of judges has been selected for this year's show, a very liberal premium list is offered and in addition thereto a very large and attractive list of cash and other specials. The Empire Cooping Company will coop the show. Address Calvin Hicks, Sec'y, Rockville, Md., for premium list.

BUFFALO, N. Y.

The second annual show of the Buffalo Poultry, Pigeon and Pet Stock Association will be held at Convention Hall, Buffalo, N. Y., February 1 to 6, 1909. The association has been fortunate in securing the services of Mr. George H. Burgott as superintendent of poultry. Mr. Burgott needs no introduction to the poultry breeders, having been superintendent of poultry at the Pan-American Exposition and judge at Madison Square Garden for the past twelve years. The pigeon superintendent is Mr. Charles E. Lang, the well known pigeon judge. The judges for the coming show so far secured are well known to the breeders of poultry and pigeons and are men of wide experience. The judges for poultry are Messrs. Schwab, Butterfield, Brace, Webb, Williams, Dr. Andruss and Dr. Kyle; the judges for pigeons are Messrs. Ewald, Kirkover and Smith, and J. Thomas Harp for pet stock.

The management of the Buffalo show intends to make their coming exhibition one of the finest and best ever held in this part of the country. Numerous gold specials and silver cups have been secured, including \$100 in gold from the Chamber of Commerce of Buffalo. The cooping of the show will be done by the Empire Cooping Company, and all birds will be cooped singly. For further particulars and premium list, address Howard J. Young, Cor. Sec'y, 623 Elm St., Buffalo, N. Y.

CINCINNATI A. P. A. SHOW, OHIO BRANCH.

The Cincinnati Poultry and Pet Stock Company, incorporated under the laws of Ohio, capital \$5,000, will, January 12-16, 1909, give its eleventh annual show, and we have a record of always paying our premiums.

There have been no breaks in the ten shows we have given, one each year; this we consider quite a record.

This year the American Poultry Association, Ohio Branch, give their show here.

The show will be cooped with Empire coops, will have an institute at which men of national reputation will lecture.

Several clubs will meet with us, have a number of state cups offered and ribbons for all varieties.

Premiums, \$3—First, \$2; second, \$1; third with special of \$10 for each variety. Judges—S. T. Campbell, Mansfield, Ohio; George H. Burgott, Lawtons Station, N. Y.; Loring Brown, Smyrna, Ga., on poultry, and F. C. Borchardt, Jr., Manitowoc, Wis., for pigeons.

By using

The Breeder's Egg Tester

The greatest invention of the century for the poultry man. The Breeder's Egg Tester will enable you to instantaneously select the strongest and most nutritious eggs for hatching. No chance of placing weak or infertile eggs in your incubator or under your hens. The test is positively accurate and reliable. No guesswork. The Breeder's Egg Tester will show evaporation of the egg before and during incubation to the fraction of a grain. This enables you to follow more closely the method of the natural hen, never before found possible. No more eggs to throw away no more dead chicks in the shell. All chicks will be strong, healthy and hardy. Eliminates the cause of more failures in the poultry business than any other condition found in chicken raising. The cost of the Breeder's Egg Tester is \$2.00 net postpaid. Made of the best aluminum and will last a lifetime. Get one today. Sold under a positive guarantee that, if after examination you are not satisfied money will be refunded at once. Owned and controlled by one of the most reliable and responsible business men of Buffalo. Patented in the United States and Canada. Patents pending in foreign countries. Dept. B

Magic Egg Tester Works

Handles over 2,000,000
Eggs per week

WHAT A BOY AND A "DANDY" CAN DO

A ten year old boy with a "Dandy" Green Bone Cutter, the scrap bones from the table and a few from the butcher, can produce the best, cheapest and richest poultry food in the world. And the "Dandy" runs so easily the work will be but play for the boy.

Chickens relish cut green bone because it supplies just what their appetites crave. It takes the place of the fat, juicy worm nature supplies when the fowls run at large.

Grain and vegetables do not

WRITE TO-DAY

contain protein in sufficient quantities for the hen's use—that's why grain-fed hens don't lay more eggs—that's why you must supply your hens with a feed that does contain a high percentage of protein, if you want them to lay lots of eggs.

Green Bone is rich in protein—the important ingredient necessary for making eggs, flesh, feathers, bone and muscle. It supplies the materials the hen needs in the right proportion.

But you must prepare the bone in such shape that your fowls can utilize it—you must cut it.

That means that you will have to provide yourself with a "Dandy" Green Bone Cutter—the machine that cuts the bone in the proper form. The "Dandy" produces cut green bone in ideal condition for feeding. It automatically feeds the bone to the knives, no faster than they can cut it, consequently it does not chip or slice the bone off, nor tear or splinter it, but grinds it like coarse corn meal—bone, meat and gristle; they're all alike to the "Dandy."

The knives are made from solid tool steel milled out—not drop-forged and rolled—that's why they cut so free and the machine runs so easy.

The "Dandy" is easily and quickly cleaned which means a great saving of time and trouble.

We'll send you one on 15 days free trial, without a cent in advance. If you find it comes up to our guarantee, which is broad, you keep it—if not, you send it back at our expense.

You need a Bone Cutter—we want to supply it. The "Dandy" and your boy can cut all the bone you'll need and the increase in your egg production will make this a profitable investment for you. Let us send you catalog of the sizes—we know the price will please you. Write today for our free trial plan.

Stratton Mfg. Co., Box 17, Erie, Pa.

We have a fine array of judges, and with our past record of square dealing and good and prompt payment of premiums we should draw many entries.

Premium lists will be ready early in December and will be mailed promptly by applying to Julius Friedeborn, Sec'y, 139-141 W. 6th St., Cincinnati, Ohio.

IT LOOKS LIKE A RECORD-BREAKER FOR BOSTON.

The premium list for the big Boston show is now ready. The special prizes are larger than ever. The American Buff Plymouth Rock Club offer handsome cups and cash. The New England Light Brahma Club offer \$60 in cash. Nearly \$200 is offered on games and game bantams. Rhode Island Reds have nearly \$100. There is \$70 on White Wyandottes, besides champion and club cups. Hamburgs nearly \$100. Dorkings have about \$100, besides handsome cups and the American Dorking Club will meet here. The Polish classes have cash, silver cups in abundance, and a \$50 Parker gun, all amounting to over \$200. The National Bantam Association offer cash specials and C. M. Smith will judge the classes other than game. The American Plymouth Rock Club will offer substantial cash prizes.

The Silver Penciled Wyandotte Club, the American Faverolles Club and the

WHITE WYANDOTTE

One of the prize winning hens at Columbus, Ohio, last winter. Bred and owned by Ira C. Keller, Prospect, Ohio

Golden Wyandotte Club are added to the long list of specialty clubs that will meet at Boston in January, and they, as well as many other clubs are favoring the show with handsome specials. There is not room here to tell all the good things offered, but a premium list will be sent on application to Boston Poultry Association, 30 Broad street, Boston, Mass. Entries close December 26, so this is your last reminder. W. B. Atherton, Sec'y, 30 Broad St., Boston, Mass.

CEDAR RAPIDS, IA.

Every mid-west fancier will be interested in the forthcoming premium list of the fourteenth annual exhibition of the Western Poultry Fanciers' Association, to be held at Cedar Rapids, January 25 to 30, with Judges Russell and Tucker to place the awards. The show this year, as in the past, offers more liberal cash, special and sweepstake prizes, more state specialty cups, larger and better class of exhibits than any show in the state. Ample facilities, the best in the country, in express, hotel, and best of all the most liberal treatment. If interested send for premium list.

OKLAHOMA CITY, OKLA.

Oklahoma breeders are making great preparations for their show to be held at Oklahoma City, January 18 to 23, inclusive. They have recently filed with the secretary of state of Oklahoma articles of incorporation and have been granted a charter for same with a capital stock of \$1,500. This

alone should go a long way towards showing that all premiums will be paid. All the poultry exhibitions held in Oklahoma City heretofore have been a success in every sense of the word, and they have great hopes that this will be the largest show ever held in the new state. They are offering very attractive cash and special premiums this year, and you need not be in doubt as to the "square deal" proposition, as every breeder is going to get what he justly deserves. Premium list will be out about December 15.

George C. Winans, Secretary.

TWIN FALLS, IDAHO.

Twin Falls County Poultry Association will hold its first annual show at Twin Falls, Idaho, January 28-30, 1909. D. T. Heimlick, judge. Competition open to the world. Premium lists may be had upon application to the secretary.

Mrs. B. F. McPherson, Secretary.

Peavey, Idaho.

AMERICAN CORNISH CLUB ELECTION.

At the annual meeting of the American Cornish Club, held in Chicago, December 16, 1908, the following officers were elected:

President, R. D. Reider, Middletown, Pa.; first vice-president, C. S. Brent, Oconomowoc, Wis.; second vice-president, J. W. Southmayd, Chandler, Okla.; third vice-president, F. H. Williams, Long Beach, Cal.; secretary-treasurer, H. C. Hayes, Eureka, Ill. Executive committee: Wm. H. Reaman, Toronto, Ont.; W. S. Templeton, Dakota, Ill.; R. D. Reider, C. S. Brent, H. C. Hayes.

Club membership, \$1 per year.

Club catalogue, 5 cents.

H. C. Hayes, Sec'y-Treas.

Eureka, Ill.

THE BLACK LANGSHAN CLUB OF AMERICA.

We have just received a very encouraging letter from National Secretary P. J. Myers, of Crawfordsville, Ind., of the above club, which should be of much interest to all Langshan breeders of this country. The report is as follows:

Organized February 6, 1908, at the Indianapolis State Show; twenty-five charter members. March 1, 1908, our Year Book containing our By-Laws and other club information were out. March 5, 1908, five hundred circular letters distributed to every Langshan breeder we knew of or could find out. March 6, 1908, our membership certificates were out and all those joining have a certificate of membership properly dated and signed to show that you are a member in good standing.

This shows that one month after we organized we were on our feet ready for business in a business way, something that very few, if any, specialty clubs can show, especially any Langshan club. And we are still doing business. The Black Langshan breeders that we have reached have begun to wake up; they see that we have started a long felt want in the Langshan interests. The proof of this is that from February 6 to October 1 we piled up over one hundred members, and the majority of the old boys and a constant flow of new ones keep the secretary busy filling out membership certificates. We have started a much needed want for the benefit of breeders who breed this noble fowl. Then the question comes, how are we to be benefited? Now, just a moment. Take up your monthly poultry journal, look over the advertisements carefully; why is it that you find so few of our breeds advertised and so many of other breeds? I'll tell you why! Not because this grand breed hasn't the qualities that others have, it is because these other varieties that are so popular and have these ads have a specialty club back of them that is pushing their favorites, making them popular, making more breeders of their favorites, and making business better. That is where we are benefited.

Now, to Langshan breeders I wish to say the National Black Langshan Club of America is trying to put this grand and noble breed of fowls on an equal footing and far above many others, and I know we can do it by all of us joining

Continued on Page 57

Write Today For My Special Proposition on The Fairfield.

Let me tell you about my new plan which will not only save you money on an incubator and brooder, but will help you get a Fairfield partly or entirely free. Just write me for my catalog and get my special offer at the same time. It's the greatest offer ever made on an incubator. Get it today.

Are sold direct from our factory to you at a saving of 30% to 50%. In construction they can't be beat. Steam and water forced circulation heating system, giving a uniform, steady temperature and insuring a perfect hatch of all hatchable eggs. A positive regulator and non-explosive lamp. Beautiful finish—California Red-wood throughout. Easy to operate—easy to understand. The best incubator made today. Send for one on this guarantee—if not satisfied, return it and I will refund your money and pay freight both ways. Write today for special offer and catalog.

S. C. Thompson, Manager, Nebraska Incubator Company, 217 Main Street, Fairfield, Nebraska.

"Sun" Chick Starter

A primary Grain Food for Baby Chicks during first 20 Days

The success of your broods, from the moment they are out of the shell, depends on the feed you use. Dickinson's Chick Feeds are the kind you can depend on.

In addition to choice, re-cleaned, cracked grains and seeds, "Sun" Chick Starter contains steel-cut oatmeal, fine granulated bone and fine charcoal. The mixture, which is prepared under the direction and supervision of leading poultry experts, has no equal in promoting healthy and rapid growth. Hundreds of enthusiastic poultry men will tell you that "Sun" Chick Starter guarantees life, health and beauty and future layers.

Dickinson's Poultry Feeds

will increase your profits this year. They offer highest results with greatest economy.

Crescent Chick Feed

is specially prepared for chicks from three to eight weeks old. The materials and proportions are similar to the "Sun."

Globe Scratch Feed

for growing and full-grown fowls, is the best balanced ration to keep hens healthy and to increase egg production.

We also make "QUEEN" Poultry Mash, a ground feed for fowls, and "KING" Pigeon Feed, for Squab fattening. Ask your dealer for any or all of Dickinson feeds. If he does not carry them, write us and we will see that you are supplied.

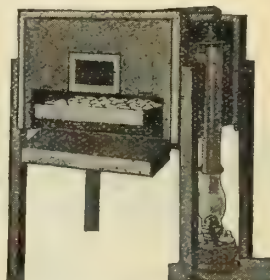

THE ALBERT DICKINSON CO., Seed Merchants, CHICAGO, ILL., MINNEAPOLIS, MINN.

PRICE TO AGENTS \$4.50

for this 56 egg Phillips Utility Incubator

SHIPPING WEIGHT 47 LBS.

I guarantee this incubator to consume less oil, to distribute the heat more evenly, hold the temperature more accurately, control the humidity better and to hatch more and stronger chicks from a given number of eggs than any other small incubator made. I further guarantee it to hatch 85 per cent or more of the fertile eggs. You may keep it 30 days on trial and if in that time it fails to fulfill my guarantee, and if for any reason whatever you wish to return it you may do so and I will immediately refund your money; no talk, no letters, just money right away. The incubator is strongly built of durable materials and should last for ages. For five years I guarantee it against defects of workmanship and material and throughout that time will make all necessary repairs to maintain a hatchery efficiency of 85 per cent or better, or will replace it with a new one or refund the purchase money. This is such a guarantee as is not made by any other incubator manufacturer and would put me out of business if I did not build a machine that I can depend upon to uphold it. This incubator has composite walls and top two inches thick, including the entire front. The small double glass window gives a plain view of the front rows of eggs like large glass doors on the egg level do. The slatted trays make the turning of the eggs quick and easy. Each incubator is shipped complete with instructions for operation and everything needed to start hatching except oil and eggs. 56 eggs \$4.50, 112 eggs \$7.50, 224 eggs \$12.38. These prices are agents prices and will be withdrawn from the public February 1st or any time before that when I may have secured 200 new agents. Catalogue free

Olds' Red River Valley Seed Potatoes

Red River Early Acme

Acme is like Ohio but a little earlier and more productive. Our stock this year is very fine, smooth, clean and handsome. Plant our famous Red River grown potatoes if you want a profitable crop.

Red River Early Ohio

Early Ohio is the most popular early in the country. Olds' Red River Ohios are unsurpassed for purity, smoothness, fine appearance and strong vitality. We sell thousands of bushels every year. Get our prices.

Red River White Ohio

Similar to Red Early Ohio except in color, which is a fine white, or nearly so. Just as early, just as good in quality and more productive. 557 bushels have been grown on one acre.

Red River Triumph

Triumph is the earliest of all potatoes. Our Red River Triumphs produce the largest yields as well as growing the quickest crops. The seed is not excelled by any other in the United States.

Red River Seed Potatoes, grown in the cold northwest, are ahead of all others for quick early maturity, vigorous growth and great productiveness.

Olds' Seed Potatoes have a national reputation. 21 years experience growing and handling; our potatoes are known in every section and we are acknowledged headquarters for pure seed of the best varieties. Send Postal for 88 page Catalog giving correct descriptions and true illustrations of the best in Seed Potatoes, Corn, Oats, Barley, Field Seeds, Garden Seeds, Poultry Supplies and Tools. Prices right.

CHICAGO WINNERS—At the late Chicago Show won 2nd and 4th cock, 2nd, 4th and 5th hen, 1st and 4th cockerel; 1st, 3rd and 4th pullet.

I have hundreds of big white beauties that will win for my customers this season. I am making special bargain prices, and will guarantee satisfaction. My young stock is the best I ever raised. They are large in size, clear white, big boned, rich yellow legs, and in fact typical White Rocks in every respect. Some of the best breeding birds I used in my pens last season for sale at sacrifice prices.

Halbach's White Rocks are the kind that you can depend upon. Remember their show record. They won more points at the big White Rock show at Chicago '07 than any other exhibitor. They have won for me and my customers at the largest shows in the country, including New York.

Sixty Acres Devoted to White Rocks.—I have spent years in building up my strain, and when you buy stock from my yards you get birds that are not only topnotchers themselves, but they will breed true and produce highest exhibition qualities. They will breed and win for you just as they do for me.

Let me send you what you need in the way of choice show birds. I also have a big lot of grand breeders at special prices that will win in grand competition. They are big white beauties, grand in type and in pink of condition. Write for price on what you want; buy now and get bargains.

H. W. HALBACH, Box A, WATERFORD, WIS.

A SWINDLER AT WORK.

Editor American Poultry Journal:

I would like to warn your readers, especially your advertisers, against a clever rogue who apparently makes it his special business to call upon dealers in poultry supplies and victimize them by means of forged checks. Perhaps the account of my experience with this individual, together with a description of him, may save some one from loss, even though it may not result in the arrest and conviction of the rascal. I naturally dislike to make public the fact that I have been "done" by a swindler, but the circumstances in this case are such that I feel it to be my duty to fully expose the whole matter.

Saturday afternoon, November 28, 1908, a prepossessing stranger called upon me and for some two hours discoursed understandingly about poultry keeping in general and various poultry supply advertisers and my own "Ideal" trap nests in particular. He gave his name as "Stewart Wilson," and claimed to be manager of the poul-

SILVER WYANDOTTE

First prize hen at Columbus, Ohio, last winter. Bred and owned by Ira C. Keller, Prospect, O.

try department of a large dairy farm at Melrose, Rensselaer county, N. Y., where he said he had 1,400 laying Leghorns in stock. He had copies of American Poultry Advocate and Farm-Poultry with him, and seemed to be well posted in regard to other poultry journals and their regular advertisers and writers.

When this individual arrived here he began to talk "big business" and seemed very much disappointed to find that my "Ideal" trap-nest fittings do not run up into money to such an extent as he had previously thought. I can see now that he came here intending to "work" me for a larger sum than he eventually succeeded in doing. However, I did sell him thirty dollars' worth of "Ideal" trap attachments, record sheets and leg bands, for which he presented a certified check for fifty dollars, payable to his own order. I had, of course, heard of that old game, but he "had me coming" all right, and I handed out twenty good dollars in change with but slight hesitation, and asked him to stay to supper.

I did not learn until the next Wednesday that the certified check was a forgery. I had just shipped the goods, but a train was behind time, and I stopped them by phone before they left town.

Description of the Forger.

Name given—Stewart Wilson, Melrose, Rensselaer county, N. Y.

Face—Fair, well filled out, smooth shaven.

Complexion—Medium light, healthy.

Height—About five feet eight inches.

Weight—About 160 pounds.

Clothing—Neat dark blue serge suit, dark overcoat with a velvet collar, black derby hat, large brilliantine tie, tan shoes.

Age—Uncertain, but may have been 35, more or less. He looked younger to me, but this description is a composite of the observations of three people who saw him. One of them was a barber who shaved him.

In conversation and general appearance this party seemed like a quiet, modest, clean-cut, well-bred country gentleman of leisure and means. At least, that was the unfortunate impression wife and I got of him. To me he looked "as honest as the days are long."

His check was made out in a large "business hand," and the rubber-stamped printed certification of an Albany (N. Y.) bank with the teller's signature written in, all in red ink, across the face of the check, looked all right to me at the time. The red-ink signature of the teller was in a finer hand than the body of the check, and had a big flourish and a big blot at the end.

It does not seem reasonable to me that this individual came into this part of the country to swindle but one man. True, he said that he came all the way from home just to see me, but I do not credit that. Probably there are others. His interest in and familiarity with advertisers in poultry magazines of national circulation suggests that he is likely to continue his operations in one or another section of the country for a considerable time, unless caught. If so, this story may not be too late to protect somebody from loss at the hands of this forger.

F. O. Wellcome, Trial Justice,
Yarmouth, Maine.

PROFITS IN POULTRY.

This subject concerns the poultry-man and the farmer more than any other. A few years ago it was only the fancier who was willing to pay \$5 for a good trio of thoroughbred birds. The fancier demonstrated the advantage of raising pure bred stock to the poultry-man and the farmer. Today all poultry-men and nearly all intelligent farmers have discarded the mongrels to make room for the more profitable pure blood, not hesitating to pay \$5 to \$25 per trio for the better breeds, which have increased their profit several times the amount of the price paid for the trio.

After discarding my mongrels the question arises, What breed do I want? Some will tell you to get a heavy fowl, while others will advise you to get one of the Mediterranean class. For illustration we will take two of the older breeders, Rocks and Leghorns. Supposing you raise a flock of fifty—twenty-five cockerels and twenty-five pullets; a laying hen should not be kept for

WOLVERINE STRAIN WHITE PLYMOUTH ROCKS

A Wolverine Strain Winner

Shown by myself, made a clean sweep of first and special prizes at Sherwood in 1904, Detroit 1905, Grand Rapids 1906, Toledo 1907, Last season at Madison Square Garden, Jamestown Exposition, Detroit, Toledo, Chicago, Indianapolis they won thirty-three regular prizes, besides cups, medals, diplomas and other spoils. I make the claim that no other White Rock breeder has a better show record than this. Some may advertise big winnings at State Fairs, but you know that the best birds are not entered at such places and you know that lots of birds winning firsts at some State Fairs would not be in the money if exhibited at some small Poultry shows. If you need any show birds to fill out your string and want stock that you can depend upon at reasonable prices, it will pay you to write me. I have a better lot of show birds than ever before, and that is saying a great deal. My prices are honest and guarantee the broadest. If what I send don't more than please you return it at my expense and I will return your money just as promptly and just as cheerfully as I took it. Whether you are in the market or not you ought to have a copy of my 21 page handsomely illustrated catalogue. It's free.

laying purposes over three years; at the end of three years the hens are sold. The Rocks will bring about \$15 more than the Leghorns, conceding that they will weigh 100 pounds more and providing you can get 15 cents a pound. The Leghorns will lay about fifty eggs more per year than the Rocks. In three years the twenty-five Leghorns will produce 310 dozen more eggs; at 18 cents per dozen the value of their egg production would be \$55.88 more. The Rocks will consume 60.4 each more feed per year, or \$45 for twenty-five hens for three years. This would give the Leghorns earning capacity \$85.88 over the Rocks. Deduct \$15 for what the twenty-five Rock cockerels will sell for over their rivals; this will leave \$70.88, or what the Leghorns will earn more than the

way they have worked their way to the front, until their praises are voiced by thousands throughout the land. No breeder or writer ever denied the remarkable laying ability of this handsome breed. I noticed an article some time ago which was unfriendly to Anconas, stating they were wonderful layers, but their eggs were not of a good flavor. I couldn't think the gentleman would be guilty of a willful misrepresentation, but concluded he must have gotten hold of a stale egg. I desire to say that Anconas lay a nice, large white egg, having a delicious flavor.

Many breeders are keeping pace with the times by discarding their breed for the grandest of breeds—Anconas. The replacing of their stock with Anconas is the handsome tribute paid by many

First pullet at Jamestown Exhibition.—Greystone Poultry Farm, Yonkers, N. Y.

Rocks. I am quoting these figures to show you that the profit is in the eggs. Where one man makes money by raising stock for the market, there are twenty who make money in eggs. These figures show beyond doubt which breed to select. No one can deny the laying ability of the Leghorn. They have always been noted for being great layers.

The world is progressive. This is especially true in the chicken business. While Leghorns were regarded a few years ago as the foremost egg producers, they have met their superiors in Anconas. A few years ago this breed was comparatively unheard of in this country, although they have been bred largely in England for the past sixty years. They were introduced in this country about ten years ago. "By their works ye shall know them." By this

progressive breeders to these most profitable layers. Anconas not only excel in laying the largest number of eggs, but also lay a very large white egg. They are noted for their heavy production during the winter months when the price of eggs is high.

A poultry-man separated his Anconas from his other breeds to compare their laying ability. He told me "that his Anconas laid nearly twice as many eggs and consumed less feed." Have received many such flattering reports from other customers. H. C. Sheppard

Berea, Ohio, Dec. 7, 1908.

"Why Poultry Pays and How to Make It Pay" is the title of a book written by Morgan Bates, and is especially adapted for beginners. Price of this book is only 50 cents.

"SHIPPING FANCY POULTRY."

By Mrs. A. A. Berry, Clarinda, Iowa.

It is my candid opinion, and I speak from experience covering a period of fifteen years shipping pure pure-bred poultry, that the breeders are weaker in shipping than any other point about the fancy business. Lack of suitable coops for shipping is the trouble. They should be light, strong and large enough; but too often, when an order is received, they go to some store and obtain a hardwood box.

I have received poultry from highly advertised breeders with three-colored letterheads, half-tone pictures and such breeders that have made good at shows, with their birds, in hardwood boxes, the sides of one-half inch stuff, ends three-fourths or an inch and much too large, but not of sufficient height.

This kind of a business costs the people who buy the pure-bred fowls thousands of dollars extra every year in the way of express charges. This certainly is a detriment to the fancy poultry business.

I once received a shipment of eight fowls from a highly advertised breeder having fine, high-scoring prize winners, but must say that the shipping crate was a fright. I weighed it and found its weight to be forty-six pounds. In comparison I took a whitewood shipping coop that would hold those chickens comfortably, which weighed just fifteen pounds, a difference of thirty-one pounds. The express charges were 4½ cents per

pound, which made an extra cost of \$1.39; besides the first cost of the light shipping coop is less than the heavy one if you value your time anything, as you know it takes considerable tinkering to rig up a store box in preparation for the shipping.

A shipping coop of the lighter sort for the eight birds would not cost over 40 cents each. It would be worth that sum to your customer, and if not he could return it and the cost would only be 10 cents, this covering the return charges. The latter is done a great deal and good coops may be made to do the duty of transporting chickens a number of times. The express charges vary according to the distance and competition, but range from 3 to 10 cents per pound, the average being about 6 cents, so you see that every pound counts.

Every breeder should provide himself with a few of the various sizes of coops and have them ready. Most of the breeders cannot get them on short notice, as they live too far from the dealers who keep them.

I have tried a good many kinds from different places, but the best, lightest and most reasonable in price is made at Webster City, Iowa. Now this is not an advertisement for them, as they know nothing about this article, but I must say that their coops are the best I have tried.

Get the breeders in your vicinity to club together and get a supply of these coops. It will pay every shipper, as everything that tends to cheapen the cost

of pure-bred poultry will stimulate more buying. Nothing is so discouraging as to pay a high express bill on the start; it has a tendency to lower the temperature of a promising case of chicken fever.

"Any old box" that so many use will surely lower your own estimate; it shows that you do not consider your birds valuable enough to put them in a nice, light shipping coop, and shows that you do not care how much of an extra charge you put on the buyer, or how the fowls look when received.

While traveling I have watched the express companies handle fancy poultry and talked with the express agents and messengers, and a very great per cent are shipped in heavy hardwood store boxes, mostly too small and unhandy to furnish the fowls with necessary water.

I do not for the life of me see why so many breeders are so careless about this matter. It is not economy as you can have the light coops returned to you for 10 cents from any place in the United States, paying when coop is received. Even if it could not be used but once the cost per bird will not be over 10 cents, and perhaps not averaging over 5 cents, and the advertisement of shipping in nice, light coops is worth more than the cost and the saving to your customers is worth many times over the amount.

Wake up and get in line, breeders, and discontinue such sloppy methods as shipping your pure-bred fowls in any old thing.

EXHIBITION COOPS

Now ready for immediate delivery. Prices, single size, \$1 each; \$5.50 per half doz.; \$10 per dozen. Pen size \$2 each, two for \$3.50 or six for \$9. Furnished complete with the proper size tacks, nails and cloth to cover. All coops are stained a rich mahogany color unless ordered without any finish. Free with each order of one dozen single coops, we will send without any extra charge one coop pen size, or for \$6.50 we will ship one-half dozen single and one pen size. Our coops are all machine made. The single coops are 24x24x30 inches and the pen coops 24x48x30 inches as called for in the American Standard of Perfection. Coops of any other size are very apt to be set in the back row at many poultry shows. The dowels are of the best yellow pine and the door slides all the way up, which will allow the bird to be removed without breaking the feathers. This means POINTS in scoring. All coops can be shipped flat and be set together in a few minutes. They can be as easily taken apart after the show and packed away in a small space. Our coops are built strong and can be shipped from show to show with birds enclosed in perfect safety. Order direct from this ad or send for our new illustrated catalog, showing how our coops are made, with pictures of the machines that make them. The catalogue shows the different styles of coops we make and also tells about our popular I. C. Trap nests, feed boxes, shipping coops and other poultry supplies. We make a specialty of cooping shows and make a special 8 section coop that is just the thing for poultry associations.

Winter Layers

"Dear Sir:—A message reports the safe arrival
of the cock at Mt. Clemens, and again I thank you.
I can assure you the birds here show the stuff pos-
sessed by the Morgan stock, for let me show you
how we had them go the pace to the limit. Our
severest weather, lasting all through January, 50
per cent of the time 7 to 10 below zero. This has
not stopped them giving a 75 per cent egg yield.
Their health is of the best, not one sick case, ex-
cepting the old cock, which is to be killed, and the
best part is that they were housed in an open front
house, no curtain, always open, and they were
made to sleep in the same house, and this with
but one frosted comb. Dusting, too, was done in
this same house and they enjoyed their quarters.
So how can I say any more, does not this show that
I am satisfied." Signed.

Prize Winners

Phillippi, W. Va., Oct. 23, 1908

"Sirs:—I wish to report on the chicks I hatched
from the setting of eggs I bought from you last
spring. Nine of the eggs hatched, I got five pullets
and four cockerels, the first pullet commenced to
lay when she was five months and eleven days old.
At the great Cumberland, Md., show, I won with
these, on three entries, 1st cockerel, 1st and 2nd
pullet." Signed.

Even Colored Birds

Beloit, Wis.

MATING RHODE ISLAND REDS.

Editor American Poultry Journal:

Having seen an article on mating the
Reds in your September Journal, I have
become somewhat interested, inasmuch
as the writer says that he would not ad-
vise the use of the double system of
mating, because while you might get an
accidental good specimen, in the long
run you would have your stock in such
a condition that it would be impossible
to tell what it would produce. In reply
to this would say that while the single
mater has had an extended experience,
he is as far off from the facts of the
case as the man in the moon is from any
system of mating.

Now, in the first place, I wish to say
that all breeds of Reds, large or small,
east or west, no difference, do hatch some
few that are too light in color, also a
few with smut and peppering. This all
honest breeders will agree on. Now then,
these same honest breeders will also agree
that all good breeders have in the past
few years been breeding a richer and
darker under color, and yet, while we
have accomplished this, we have to a
certain degree lost in the black in the
hackle, wing and tail. Of course, some
big breeder may say he has as good
wings in his flock as he ever had and the
writer would not doubt but what he has
some, but not so many as he should have,
according to the number of good body
colored birds he has in his flock. The
writer will venture to say that the big
breeder has not improved the black sec-
tions as he has the red ones. I have in
my flock several hens that were hatched
from eggs bought from several of these
big breeders by myself, also by some of
my friends, and they have hatched pul-
lets that were all red without any black
in any section. Where did these red
birds come from? I have also hatched
pullets that were nearly all black from
the same setting of eggs.

Now, by adding those that are a little
too dark and some a little too light, what
else have we from the single system of
mating than the big breeder said we
would have from a double system? Sure-
ly we could not get any worse when we
compare both systems with his statement.
It will also be remembered that at the
Cincinnati meeting in January, 1906, a
large breeder had on exhibition a very
fine and valuable pullet that had little,
if any, black in any section, yet she was
red in outer and under color, red from
tip to tip. Now all big breeders hatch
some like this, perhaps some more than
others. Now, are they going to throw
away these fine red females because they
have no black, and are they going to keep
throwing away their cockerels with black
in hackle? What are we going to do
with the single system cockerel when he
has no black in hackle, but throws it in
hackle when he molts as a cock bird?
Why do they do this if the single sys-
tem is right and the double system
wrong? How are we going to stop the
black from coming in hackle of males
when it is increasing under the single
system of mating? How are we going to
stop these beautiful red females from
hatching without black when under the
single system they are on the increase?
Do we want to stop them from hatch-
ing so or not? Are the big eastern breed-
ers using the double system on the quiet
until they have a supply on hand?

There are many ways to look at these
questions of breeding. When we speak
of line breeding we also get these same

birds so the big breeder has simply for-
gotten himself or has never put the dou-
ble system into use. I often get letters
from breeders asking why they get good
cockerels and no good pullets, while, on
the other hand, I get letters asking why
they get good pullets and no good cock-
erels. Why not get both from a mating
under the single system?

These are questions of importance, and
the amateur should not be misled. I am
yours for more and better Reds.

the club and staying with it. It's a good thing, let's all of us "push it."

Now, as to special prizes, we are offering a club cup at every state show in the United States, also five other beautiful badges. Besides this we are offering at every local show and county show our grand special, also five other specials. These specials are for members only. Any association may have them by addressing the secretary. They will be awarded according to our by-laws, which may be received from their national secretary, P. J. Myers, Crawfordsville, Ind.

BREEDERS OF ANCONAS, READ THIS NOTICE.

A national meet of the Ancona Club of America will be held at Toledo, Ohio, during the poultry show which takes place January 19-26, inclusive, 1909. All breeders of Anconas are urged to be present. Send a pair or trio of birds at least. We want and expect to have exhibited 200 Anconas. Come with your birds and help boost the breed at the show. And offer any suggestions that seems for the benefit in any manner.

With this in view the following notice is published to inform the club members of the meeting:

Notice is hereby given that a meeting of the members of the Ancona Club of America will occur during the Toledo Poultry Association exhibit January 19-26, inclusive, 1909. This meeting is for the purpose of discussing the Standard of Perfection and its amendments and amendments to By-Laws of club.

W. H. Branthoover,
President Ancona Club; Office, 6115 Station St., East End, Pittsburg, Pa.

A NEW SHORT COURSE IN POULTRY HUSBANDRY.

A ten-day special course in Poultry Husbandry will be given by the Iowa State College, Ames, Iowa, January 4-16, 1909.

This is the first short course to be offered in Poultry Husbandry by this college, which is so widely known for its winter short courses in stock and grain judging. The poultry work will be given by the Poultry Department, the buildings for which have been recently completed. The course comes during the vacation of the college year, allowing the instructors to use all their time and equipment for the special course students.

The poultry farm, where much of the instruction will be given, contains nearly twenty acres, upon which several buildings have been erected. One building contains a feed room, carpenter shop, incubator room, egg room, marketing room and living rooms for the attendants; is steam heated and electric lighted. Another is a curtain front continuous house divided into pens capable of housing 250 fowls. This building contains several varieties of poultry, all of which are standard bred and among which is the first pen of Single Comb White Leghorns at Madison Square last winter. Further equipment consists of eight portable combination brooder and breeding houses, fattening houses, incubators—both electric and lamp heated—trap nests, charts, photographs, cranning machine and models.

In the ten days available for instructional work lectures and laboratory work will be given upon the most important points in poultry management. Some of the topics that will be touched upon are, The Importance of the Poultry Industry, Selection of Poultry Farms, Building Poultry Houses, Feeding for Meat and Egg Production, Selection of Breeding Stock, Incubation, Brooding, Raising Chicks, Caponizing, Killing, Dressing and Marketing of Poultry, Preparing for the Show, Diseases and Parasites, and Poultry Papers.

It is hoped that the short length of time and practicability of the subjects will make it possible for many persons interested in poultry to attend.

Further particulars regarding fees, hours, and other information may be had by addressing the Poultry Department, Iowa State College, Ames, Iowa.

BE SURE AND GET THIS BOOK—FREE.

The new catalog of the Wisconsin Incubator Co., Racine, Wis., Box No. 000 is a very fine book giving you valuable information on incubators and brooders. This catalog should be in the hands of

every one interested in incubators and brooders, as it tells you how a good incubator and Brooder should be made, and at what price a good incubator and brooder can be made and sold for. It also gives you some good illustrations and

instructive views, showing the construction of incubators and brooders. Mr. Thos. Collier, manager of the Wisconsin Incubator Co., will be glad to mail you their catalog if you will just write them for one.

Reliable Dress-goods

For over 65 years the women of the United States have used Simpson-Eddystone Black-&White calico prints. A long time for one kind of cotton dress-goods to remain the favorite! The reason: beautiful patterns, absolutely fast colors, and cloth of enduring quality.

Ask your dealer for Simpson-Eddystone Prints. If he hasn't them write us his name. We'll help him supply you. Don't accept substitutes and imitations.

THE CLOSE-TO-NATURE BROODER

An end view of contact warmth, elongated double hover, 16 to 18 inches wide, and 30, 40, and 60 inches long. Warmth by Conduction. Ventilation by induction, prevention of piling and crowding by Mechanical Construction. Said by scientific poultrymen to be the most remarkable brooder invention ever brought out. A brooder built on truly scientific lines, applying more of nature's principles to the brooding of chicks than any other brooder now made. "I am more than convinced that you have invented and built a machine on the proper lines, etc."—W. S. Russell. "I consider it the best brooder I have ever used."—Dr. N. E. Nighell. "You will find that all the poultrymen will be glad to give it a fair trial, and I know that they will get results."—J. A. Pease. "I do not think you need to hesitate to make still stronger claims for the brooder is worthy of them all."—Dr. A. F. Kilbourne. THE CLOSE-TO-NATURE IS FIREPROOF.

WHITE DIARRHEA.

The article under this heading in your July number is an important one to poultrymen. A subject that cannot be too freely discussed. This "plague" has caused the loss of thousands of "possible prize winners" yearly, and will continue to do so until by constantly relating our experiences we learn to successfully combat the disease.

Four causes are usually assigned: Improper feeding, inherited tendency, becoming chilled and dampness. The article referred to assigns the cause to becoming chilled. The writer does not advise us as to whether or not the chicks were where their feet could become wet and cold.

From our own experience I maintain that even if the chick is cold and its feet are dry, and kept so until two weeks old—other attention being what it should—we would have fewer "tales of sadness" to relate to each other and console over.

We had two hatches from a 220 size incubator, both so poor in number of "returns" that I will not mention numbers. With the first I was sadly disappointed, and when the second proved not as good after extreme care I was disgusted with the "contraption" and did not care whether any of the chicks lived or not. Having no desire to kill them outright, though I really cared little what became of them, I took them from the warm incubator and put them in an old room used as a smokehouse, which had a wooden floor which I covered with fine dry sand and sweepings from the hayloft.

I gave them a pan of water and one of sweet milk daily and at the end of three days began feeding corn bread—

that article of chick diet some poultrymen contend is "antediluvian." When two weeks old began feeding dry cracked corn and wheat. The chicks would not go into the brooder—there was no heat in it—but preferred to hover up in one corner where I fixed an old coat, under which they would go at night.

As far as I know every one is alive today. They were nearly five weeks old before I let them out on the damp ground, and one night one of them failed to come back to roost with the others. Some chick with one of the hens may have persuaded the missing one to go "home" with him. This good record is offset by our experience with hens. Although we had eggs in plenty all winter no hen showed any inclination to set until February 1, on which date we set three hens on fifteen eggs each. From that date up to April 28 we set thirty-five hens on a total of 525 eggs. From these we took off 427 fine appearing chicks. The story of the first three hens and their broods is reserved for another time. Their record cannot be beat and will make

Common Sense Poultry Doctor

Every agricultural college and experiment station, every recognized expert authority, unhesitatingly admits, that this is the greatest book on poultry diseases and their treatment that was ever published. It is completely supplanting the old works and is rapidly becoming adopted as a text book by every institution where poultry keeping is taught.

One Professor Emphatically Remarks

"At last we have a book on Poultry Diseases and their treatment which not only covers the subject completely in a practical common sense manner, but also provides for the correct identification of diseases by the non-professional which I consider a vitally essential feature." Its 16 chapters, covering 176 pages, embrace the very best tested and proven methods of treating sick and injured fowls. Its author is John H. Robinson, editor of the great eastern monthly, Farm Poultry. Mr. Robinson has drawn from every valuable source of reliable information, which, coupled with his own wide and varied experience, has resulted in what pleased purchasers enthusiastically proclaim as "the greatest ever." The price is 50 cents, all postage prepaid, and it is sold under an absolute guarantee of money back promptly if dissatisfied. This book is something every poultry keeper absolutely needs and it will save him many dollars in breeding exhibition stock in the course of a year. Send post office express money order, cash or stamps.

you sit up and take notice. But the tale of the rest takes on a sadder aspect and I give it here to prove my theory.

For each hen and chicks we used an A-shaped coop, without a board floor. This necessitated the little chicks standing on the cold damp ground, even when under hover. Under such conditions very little if any vitality can be stored, and it is no wonder we lost nearly 50 per cent of our chicks from diarrhea. Next year we intend to have board floors in all our coops, as in our opinion dryness is the essential thing in the prevention of this dread disease. Of course the chicks must also receive the best of feed and attention.

Will B. Henry.

Mason, Ill.

THE IMPORTANCE OF ONE BREED.

Every farmer and a large portion of our town people keep chickens, all of which goes to prove that chickens are profitable, notwithstanding we hear evidence to the contrary. Then if profitable why not make them more profitable and have a source of revenue which we all are working for? Surely in this age of advancement when there is so much opportunity to secure good breeds, no one need be contented with "any old thing." The desire of every enterprising person who keeps chickens should be to keep fowls for both pleasure and profit. We seldom if ever hear of any one looking with admiration on a flock of mixed or mongrel fowls, and rarely do we find the owner take much interest in such a motley array of birds. How different it is when a flock of all one kind is shown. It matters not what kind they are, or what color they may be, just so they are uniform and healthy. Our tastes may differ, widely, too, yet there are some features that commend the flock to every one, such as health, cleanliness, beauty and utility. The advantage to be enjoyed in having one distinct breed I shall sum up as follows:

First—The flock is more beautiful.

Second—If the old adage be true "That birds of a feather flock together," a flock of all one kind are more docile and contented.

Third—The birds of a separate kind are always more salable.

Fourth—It is easier to develop better laying strain of fowls.

Fifth—The sale of eggs for hatching from one good breed finds a much better market.

Sixth—The sale of eggs to private customers are enhanced as they will be more uniform in size and color.

Seventh—The mother hen will not object to any one of odd color when they are all alike.

Eighth—In mixing the breeds they are more apt to deteriorate than improve.

Ninth—The study of the nature of a breed can be more readily observed.

Tenth—Comparisons can be better made and a greater degree of excellence obtained by handling one breed. The matched team, the herd of Holsteins, the flock of Shropshires, or the pen of Chester Whites, always look the most salable and attractive. The most experienced poultrymen have proven the above argument to be correct, hence why should any one potter along with a flock of mongrels which eat as much as a good flock and yet fall short of the best results? Hence we say, get one good breed; it matters not what breed you select; you can be governed by judgment

and taste, then develop them, care for them earnestly and the good results will abundantly reward you both in pleasure and profit.

GATHERING UP THE FRAGMENTS.

BY REV. E. C. PETERSON.

Before and After.

"In order to produce a perfectly strong and hatchable egg, the dam and sire must be supplied with food that contains an abundance of all the elements that are essential to the formation of the various parts of the unhatched chick.

"After its exclusion, if the chick is fed on rich foods rich in all the things needed, its development will go on unchecked, but on the other hand if the food should lack even one necessary element the growth of the bird will be retarded and maturity incomplete."

Every breeder ought to take notice of this statement, culled from a foreign work on breeding, for I feel pretty sure that we here have the solution of poor hatches, poor development of chicks, and lack of perfect maturity.

Look Out for Winter.

The winter quarters for your layers should be looked to early. These should be warm and dry, well lighted and ventilated without drafts.

Get the young stock accustomed to their new quarters early.

Get them into their new quarters before the cold rains of the fall and early winter, gradually supply them with their new rations, or in other words, wean them from their summer diet, now when the frosts and freezing weather have destroyed vegetation and the bad weather will not permit them to be out, they will feel contented indoors, and a contented hen generally means a laying hen, other things being equal.

Leave them out without adequate quarters, without the necessary supply of food essentials, and they will come to a standstill, and this negligence is the real cause for no eggs.

How to Get PlentY Eggs.

A scientist who has discovered that the common American house fly lays 20,000 eggs during the season, is enthusiastic over a scheme to graft the house fly on the American hen. See the point?

Cockroach Egg Race, Latest Fad.

This fascinating sport is indulged in, in the country and even in Paris—preferably in the garden as dusk is coming on.

The method is as follows: Cut off the top of an egg, empty out the contents and place inside a good-sized live cockroach.

Fasten up the aperture with paper, and make a few holes in the egg shell so that the cockroach can see the light and breathe.

Place a number of these encaged cock-

roaches at one end of the table and a lighted candle at the other.

The insects, as soon as they see the light, will make for it, and a race will take place, the result will be a series of amusing wobbling turnings of the egg toward the light, and the sport is just at present enjoying a perfect furore.

Large parties sit around the tables and roar at the gambols of the eggs, and much speculation takes place as to the result of the race, which is eagerly watched.

Poultry and Children.

Choice varieties of fowls add pleasure to the premises, they engage the attention and sympathy of the children and

For two years he lived alone—his only companion being the hen. He became so attached to it that when he died he left a provision in his will that his residuary legatee, Mrs. Lucinda Brown, his sister-in-law, must take the hen and care for it until it died.

Nothing Like a Good Example.

A father had presented his little son with a pen of Bantams, which the little fellow was delighted with, but after the hens began to lay the small eggs did not seem to suit the young man.

One morning the father of this promising youngster went out in the hen house, and there to his utter astonishment he found that the boy had taken

him to snap a shot at Old Lady Campbell unbeknown, for she don't want her features preserved on paper, an' never would go near a photographer. So one day Gid saw her standing in her doorway, looking out toward the hen-yard, and he up with his camera just as he passed her, and pulled the trigger, aiming it about where she stood, he thought.

"She heard the click, and turned on him like a fury.

"What liberties have you been taking, Gid?" she called at him. "Have you dared to put me in that box o' yours?"

"Gid was sort o' scared, but he spoke up polite an' easy to her, an' told her 'twas only his second shot, an' maybe he hadn't got anything, anyway. And then what happens?"

"Why, when that picture came out there wasn't a sign of Old Lady Campbell anywhere, but there was an elegant view of her pet rooster that all her own grandsons had tried to photograph for her! He'd happened to step right into range at the very minute Gid pulled the trigger.

"The old lady was so pleased she gave him a dollar for getting the rooster and fifty cents for not getting her, an' the rest o' the Campbells paid him just the same for his good intentions. I tell ye, this world isn't evened up right, no sir!"

"Protector" and "Temptation," second cock and second hen, respectively, at Chicago, January, 1908. Imported and owned by the Huey-Templeton-Victor Company, Dakota, Ill.

give them very many pleasures that toys of any kind could not possible provide.

And at the same time teach them to use nature as an open book that the one who desires may read and study until many of its intimate secrets are known.

It is an agreeable and salutary relief from the school routine and customary studies, and elicits the taste, judgment and the kindlier feelings of humanity, which are to be matured in the future man or woman.

Give your children a chance with the poultry. Nothing handsomer than a pen of Bantams; they take up little room, are always good layers, and perfect little beauties in all their various ways.

A Fortunate Old Hen.

In the village of Fayetteville, N. Y., lives a fat old hen which has no fear of the ax.

She belonged to Charles Brown, who died at the age of 70.

away from the house an ostrich egg which had been treasured as a curiosity, fastened it in front of the nest, with a sign under it, reading as follows: "Look at that, and do your best."

How Gid Got the Rooster.

"Some folks have luck, whatever they do," said Mr. Hackett, gloomily. "You take my cousin Benson over to Nashua, now; he's always had luck, and his boy Gid is inheriting it."

"What particular form of luck?" asked Mr. Hackett's listener.

"All forms," and Mr. Hackett brightened a trifle at the opportunity to tell his grievance in full. "If there's a picnic when we were boys, and Benson had to stay home and saw wood, 'twould turn out such a storm we'd all get drenched, an' he'd be eating griddle-cakes dry-shod at home. If he—lauzee! I won't go into his affairs; I'll just tell you about Gid. Seems he's bought a camera, and set out to take pictures.

"Well, sir, the Campbell folks hired

Mr. Editor: Some time ago I wrote you expressing my preference for White Wyandottes, and suggesting that if you wanted to please me you might publish a paper in which there was nothing mentioned but the round white birds. Of course I am not criticising your ability to run a paper when I make any little suggestion like this—it is merely a hint as to how you can make a hit with me, and likewise a few other Wyandotte fellows. But I am met in your last issue with what is practically a whole-souled effort to show the White Rocks to the admiring gaze of your readers—then I wept. I am not going to stop my paper, for I still hope for your salvation. I want to encourage you, if possible. Don't get discouraged, for you are doing pretty well. Further, I don't expect you to publish any inquiry I may make regarding chickens or turkeys; what I am after is the answer to any question I may ask. You and I know what the question is. Space is money.

In this connection perhaps you might be able to get some information about the possibility of success with bronze turkeys in Florida. My father has 300 acres of pine land, with a 25-acre fruit plant, and there is a somewhat unlimited extent of free range beyond his land. About twenty years ago when I lived there I had to go after the turkeys occasionally on horseback, with a foxhound that could trail them, and drive them back home, so they would not go wild entirely and forget their home. As I remember it then, about the only trouble we had with raising them was with the turklet, or turkling. If he could survive the attacks of "bugs" he soon got too big for the various insects; but the early days of a young turk were often few and full of trouble and flees, and not having four feet to scratch with like a dog he soon quits this vale of tears. By catching the youngsters and rubbing a combination of coal oil and lard on their heads we sometimes managed to save their lives long enough for them to outgrow the dangerous period.

R. B. Clayton.

I Want to Tell
You—Old Friends
and New Friends—
About My New Fire-
Proof Old Trusty Incubator

Big New 1909 Book
Free Coupon

M. M. JOHNSON,

Clay Center, Nebraska

Send me Your New 1909 Old Trusty Fire-Proof
Incubator Book Free and Price—Freight Pre-
paid to my Station.

I've got great news for you this year, besides Old Trusty's price
being lower, and I want to tell you all about it.

My "big letter" is finished for 1909. That's what I always
call my Big Free Poultry Book and Old Trusty Incubator Catalog.
I wrote it myself, as ever, and took many of the new photographs, too.
Over 200 pages this year, and over 1,200 pictures, most of them new, so you'll
be bound to be interested, whether you got my last year's book or not.

Thousands of users of Old Trusties have written me again and sent in
helpful advice to chicken raisers, and photographs of results of their big hatches
and broods of broilers.

So be sure to write me today by postal or letter or send your name and address
on the coupon above.

I Promise You

get satisfaction or your money back, from me. 75 per cent better hatches from all fertile eggs guaranteed. Easiest, simplest incubator
in the world to run and hatch chickens with, no matter where you live or what the climate is or what time of the year you use Old Trusty.
although now's the best time to get one and start to make the most money. I promise you that my New Poultry Book gives more practical
pointers to Beginners or old experienced Poultry Raisers than any other Incubator Book published to sell or to send free. I promise you that
Johnson has been working all the year 'round to make Old Trusty better than ever and this year has been the greatest year ever. That's why I
want you to write me and to know all about

that you'll pay yourself well to learn right away all about what I've done this
year to make Old Trusty Absolutely Fire-Proof. I promise you that Old
Trusty is a better chicken hatcher and safer and surer than ever and that you'll

The New Old Trusty Fire-Proof Incubator

Yes Sir, and Yes Ma'am—Absolutely Fire-Proof Now—Safe and Certain—You Can't Set It on Fire
Anyway You Might Try, Because It's Metal Encased All Around the California
Redwood from Top to Bottom—Legs and All Fire-Proof

Old Trusty always has set the pace as a chicken hatcher that practically runs itself, and it does still. Everybody knows that
because over 100,000 are being used everywhere. But Old Trusty this year is better than ever—is fire-proof, more convenient and
more handsome. No charge for the improvements, although encasing Old Trusty in fire-proof metal costs me more than before
when I just used the best California Redwood. Now I use the same California Redwood and the finely finished metal encasing
too. Because the only way to make an incubator so it won't burn up under any circumstances is to make it so it can't burn. You
could build a fire on top or under it—pour oil on it and light the oil—or try and test it every way to burn it—or set fire to it—top—
bottom—sides—or legs—you can't do it because it can't be done.

I just want to send you an Old Trusty on

40, 60 or 90 Days' Trial

Enough to get three hatches

Freight Prepaid

To Your Railroad Station Anywhere East of the Rocky Mountains

5-Year Guarantee

Johnson's Own Guarantee of Durability

Also 75 per cent Better Hatches Guaranteed

Now about price. Don't pay two prices. Don't fuss with experiments or
new fangled improvements made to charge extra for. Look up the facts
about Old Trusty which is way past the "experimental" stage these last six
years and you can read why and all about me and my 100,000 customers and
friends in my Free Poultry Book—before you order.

My price is going to be lower to you this year—Something below \$10 com-
plete—freight paid and no worry about it.

Let me write you personally and tell you my price to you
and send you my Big New 1909 Poultry Book Free. Will you?

Most Wonderful Offer Ever Published!

Save 30% to 50% on Your Purchases!

Chicago House Wrecking Co.'s 1909 Sale of Merchandise!

From Sheriffs', Receivers' and Manufacturers' Sales!

Lumber and Building Material!

100,000,000 feet of Lumber for sale. THINK OF IT. The Chicago House Wrecking Co. offers you an opportunity to buy Lumber and Building Material today at prices at least 50 per cent below what you could purchase it for a year ago. We can do it because we buy in such enormous quantities direct from the saw mill that we are able to control their output; we are also continually buying at Forced Sales. The Lumber we're offering consists of the very highest grades manufactured. Nothing "WRECKED" about it but the prices. It is clean stock and as good or better than your local dealer sells. We have Lumber of every kind. Lumber for your house or your barn, your church, meeting house or building of any kind.

Never again will Lumber be offered at the low price we are selling it for today. This is not an idle statement. It is made after the most careful thought. Every year the supply is diminishing and the manufacturers must get more money for it, but we say to you that if you are ready to buy now, you can save from 30 to 60 per cent.

Furniture & Household Goods!

Our wonderful Furniture Catalog containing hundreds of pages of genuine bargains with beautiful illustrations in natural color effects is sent free on application. 10,000 bargains representing high-grade, brand new Furniture, Carpets, Rugs, Linoleum, Stoves, Office Fixtures and General Supplies. Bargains from Forced Sales of every kind, and nothing of the shoddy nature about the goods, either. Not the kind you would buy from the regular run of merchandise houses, but the sort of good furniture that is built "for keeps." Manufactured for city trade and now offered to you at as low a price as you can buy it if you were right in Chicago at our warehouse. This is a chance you must duly appreciate. We can supply your home complete, and we will do it at money-saving prices in every instance.

You can buy everything you need to furnish your home. Every article is covered by a guarantee so broad that you cannot go wrong. Favor us with your order. Write for our wonderful Bargain Catalog and let's convince you our prices are right. Write us today.

Hardware Bargains!

Steel Shovels 30c, Steel Hammers 25c, Handled Axes 50c, Steel Hatchets 30c, Electric Door Bells 60c, Hot Lunch Dinner Pails 20c, Meat Cutters 75c. These are but samples of our ability. We have everything complete in the hardware line, Door Locks and Knobs, Builders' Hardware in general—a new clean stock of hardware at wrecking prices.

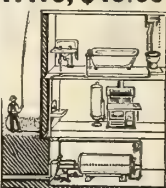

STEEL ROOFING, \$1.60 PER SQUARE

That's our price on our new high grade, semi-hardened steel roofing. \$1.60 is our price for first \$1.85 for corrugated or V-crimped. This roofing is light weight. It comes in sheets 22 in. wide by 6 or 8 ft. in length. It is strictly prepay freight in full to all points east of Colorado except Oklahoma or Texas. Prices to these and other points on application. This freight prepaid proposition applies only to this roofing advertisement and has nothing to do with any other offer. Write today.

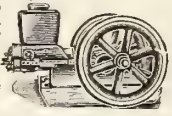

WATER SUPPLY OUTFITS, \$48.00

You can live in city comfort even though your home be on a farm. From \$48.00 up wards you can buy a complete outfit needed to give you these comforts. With our comprehensive instruction book you can install the outfit yourself. Let's tell you more about it. Our interesting book on water works systems is free for the asking. Remember it gives ample fire protection and reduces your rate of insurance.

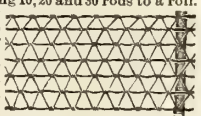

Gasoline Engines, 2 H.P. \$49.75

A strictly high-grade, brand new, fully guaranteed engine, complete in every respect. Price includes electric igniter, battery lubricator, and in fact a complete outfit ready for use. Here is an engine simple to operate, which we sell on 30 days free trial, so you take no chances. We give a five-year binding guarantee against defective workmanship or material. 2 H.P. \$49.75; 3 H.P. \$57.50; 10 H.P. \$265.00.

20-Inch Mesh Galvanized Fencing,

Per Rod 15c 20,000 rods of new square mesh and diamond mesh fencing for sale. It is put up in rolls containing 10, 20 and 30 rods to a roll. It's new, clean stock, bought by us at manufacturer's sale and now offered at 30 per cent less than regular prices. Better buy now while our stock lasts. We have but a limited supply for sale and orders are rolling in.

Iron Pipe, 3c Per Foot

Wrought Iron Pipe with couplings. Thoroughly overhauled and practical for further service; in random lengths. Prices per foot: 1/2 in. 2c, 3/4 in. 2 1/2c, 1 in. 3c, 1 1/4 in. 4 1/2c, 1 1/2 in. 5 1/2c, 2 in. 7 1/2c, 2 1/2 in. 11 1/2c, 3 in. 15c, 4 in. 21c. Larger sizes in proportion. Our high grade lap welded light weight iron pipe, with new threads and couplings is the best used pipe material ever offered. Satisfaction guaranteed.

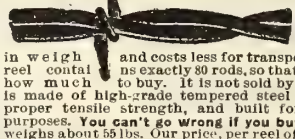

Rubberized Galvo Roofing, \$1.25 per sq.

The best ready roofing on the market. Its base is pure mineral wool and genuine asphalt. No tar, residuum or other injurious matters used in the construction of this roofing. It is positively guaranteed to give lasting service. We have it in three grades: 1-ply at \$1.25 per square; 2-ply at \$1.40 per square and 3-ply at \$1.75 per square. By a square we mean 108 sq. ft. or sufficient to lay a square. Our price includes nails, caps and cement to make the laps. At this price we prepay the freight in full to your railroad shipping point to all points east of Colorado except Oklahoma or Texas. Prices to those points on request.

Barbed Wire, \$1.80 for 80 Rod Reel

10,000 feet of this wire for sale. It's the best galvanized material on the market. It is made of No. 14 wire with the barbs 3 in. apart. It has all the strength of the regular grades of barbed wire, but is lighter in weight and costs less for transportation. Each reel contains exactly 80 rods, so that you know just how much to buy. It is not sold by the weight. It is made of high-grade tempered steel wire, with the proper tensile strength, and built for barbed wire purposes. You can't go wrong if you buy it. Each reel weighs about 55 lbs. Our price, per reel of 80 rods, \$1.80.

DOORS 40c; WINDOWS 29 CENTS

Bargains of all kinds. Our special catalog shows a marvelous aggregation of bargains. You can't be right until you have a copy of it. Here are some quotations from our new price maker. Barn Sashes \$6c; Storm Sash 70c; Stall Sash 21c; Hot Bed Sash \$1.55; Window Sash 50c; Panel Doors 80c; Glass Doors \$1.75; Window Frames \$1.25; Door Frames 50c; Base Angles 2c; Corner Blocks 2c; Base Blocks 85c; Inside Trim 40c; Plate Rails 6c; Stair Newels \$1.80; Stair Rails 7c; Porch Balusters 5c; Porch Rail 3c.

PAINTS, 30c GAL.

This is our high grade Premier ready-mixed paints put up in strong substantial cans and packages. No better mixed paint on the market at this price. We can furnish it in all colors. Covered by a binding guarantee. Barn paints 30c per gal. Cold water paints 35c a lb.

GALVANIZED FENCE WIRE, \$1.40 PER 100 LBS.

At this price we supply our new galvanized wire shorts. They are put up 100 pounds to the bundle. By shorts we mean wire that comes in lengths, ranging anywhere from 50 to 200 ft. It is good for all general purposes. We can supply it in all gauges. Our price on gauges 11, 12 and 14 \$1.50 per 100 lbs. BB telephone wire 50 lb. coils, No. 12, \$2.85 per hundred lbs.; No. 14, \$3.10 per 100 lbs. Order today.

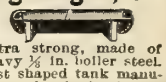

KITCHEN SINKS, \$1.40

That's the price of an 18x30 white enameled, cast iron, flat rim kitchen sink. We have blue steel enameled kitchen sinks in one piece, seamless, size 18x30 at 75c. Kitchen sinks with backs from \$4.00 up. A Lowdown Water Closet outfit with a white enameled tank, latest and best closet tank manufactured. Complete with hardware seat and necessary nickel-plated fittings, vitreous wash-down closet bowl, \$11.00.

Hogtroughs, \$1.50

Extra strong, made of heavy 1/2 in. boiler steel. Best shaped tank manufactured; absolutely indestructible, clean and sanitary. All metal, well riveted, stands strong and firm on the ground. Satisfaction guaranteed. Regular price \$2.50 to \$3.00. Our prices \$1.50 to \$2.75.

How to Answer This Advertisement

Read carefully all we have to say about the different articles offered for sale. We would advise you to send us your order at once. We will ship C. O. D. where a deposit of 25% in cash accompanies the order, balance to be paid after material reaches destination. If, however, you do not wish to order at once, then we suggest that you tear this advertisement out of the paper, cross such items on the ad as interests you most, fill in the coupon to the left and mail it to us, and we will give you more detailed information. If you do not wish to mutilate the page, just write us where you saw this advertisement and just what items interest you most, and we will send you free of all cost our Catalog with full detailed information. A postal card will do the work. Write us fully today.

Our Wonderful Catalogue!

We publish a catalog showing illustrations and full descriptions of all the various stocks that we have for sale. It will be mailed free of cost to anyone answering this advertisement and following the directions as noted in the paragraph on the left. You need this catalog. It's a book that every wise person must have in his or her possession. It tells the story of the wonderful business of our Company and of how we have gathered our stocks together, and it shows you the low prices at which we supply these articles to the public. Thousands of customers throughout this land will confirm our statement that our business is conducted honest and fair.

CHICAGO HOUSE WRECKING CO., 35th & Iron Sts. CHICAGO

Questions and Answers

Questions asked by subscribers will be answered in this department only under the condition that the full name and address is signed by the writer

Question.—I have twenty old hens and only get three eggs a day. I give them hot water and one pint of corn and one pint of wheat twice a day. Could you please tell me how I could produce more eggs? A. S.

Aurora, Ill.

Answer.—Leave out the corn and put in oats. Give a handful to each fowl three times a day. Also give them fresh cut raw bones; about two ounces to each fowl three times a week.

Question.—How long after black hens are separated from white roosters is there danger of chicks showing white feathers? C. E. G.

Ashtabula, O.

Answer.—This question has never been definitely decided. Some of the authorities claim that the influence of an off-colored male will show in the progeny during the life of the female; others after the laying of the tenth egg.

Question.—(1) Will a house double-walled, two windows in each pen facing east, house 16x80 ft., indoor pens 12x12 ft., runs outdoors 12x50 ft., be large enough for thirty-six hens (White Leghorns), or 200 in the whole house? (2) What profit could I figure on each hen if fed properly? (3) Would such a house pay me to build with S. C. W. Leghorns? A. H. J. G.

St. Louis, Mo.

Answer.—(1) Yes. (2) An average of \$1.50 per head. (3) Yes.

Question.—(1) How many laying hens can be kept in a pen 5x8? (2) Would Light Brahmas bring as good results for broilers with White Indian Game Cock as White Plymouth Rocks with White Indian Game Cock? (3) Where space is small can scratching sheds be placed in front if supplied with plenty of light as well as on side? G. F. D. B.

Philadelphia, Pa.

Answer.—(1) Seven. (2) Yes. (3) Yes.

Question.—Please tell me the best method of feeding cockerels to fat them for the market. I have been feeding a mash made by stirring up cornmeal with boiling water and adding a quart of beef scrap to a pail of mash. Feed this morning and noon and keep cracked corn before them all the time, but they have not fattened as fast as I thought they ought to have. R. M. L.

West Pownal, Me.

Answer.—In fattening fowls for market a great deal depends on confining them in small quarters. They should be placed in fattening coops, which have a slatted bottom; this prevents the birds moving about very much. A coop 6 feet long, 24 inches high and 18 inches deep is large enough for one dozen fowls. Your feed should put them in marketable condition in about two weeks, under proper conditions.

Question.—I have four S. C. W. Leghorn pullets that were hatched in an incubator the last of March and they seem to have grown every day, but have

not begun to lay as I expected. For the past six months they have had all the sour milk they could drink and scraps from table and corn, and free range on green oats; why don't they lay? E. M. S.

Temple, Tex.

Answer.—Feed wheat and oats and leave out the corn. Corn is too fattening and will not produce eggs. Feed a little beef scraps or fresh liver two or

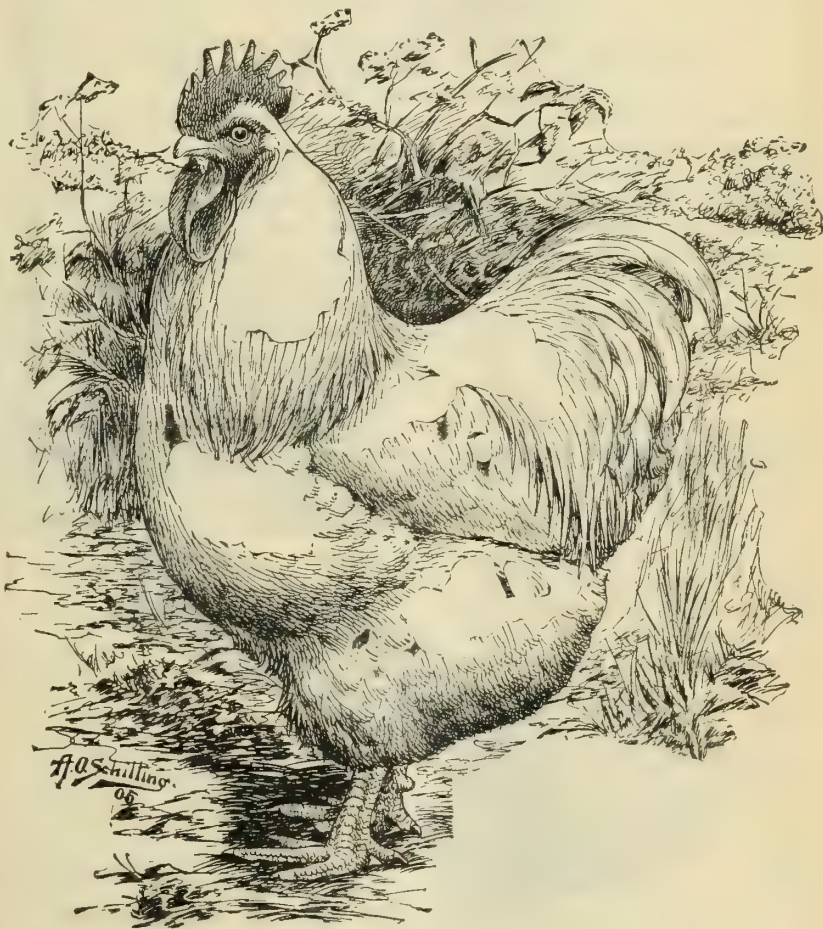

buy eggs from two different firms? (3) Would it do to mate fowls from the same hatch? E. I.

Wataga, Ill.

Answer.—(1) No. (2) No. (3) Yes, for the first year. The second year purchase a male from the same breeder you secured your eggs from. Unless you are an experienced breeder it is poor policy to mix strains.

Question.—(1) How is cob meal and gluten meal for poultry in feeding in a mash for laying food, chick food or scratching food? (2) What per cent would you give on each one? (3) Is wheat, corn, middlings, shorts, rye, barley, oats, millet seed, flaxseed, cottonseed and sunflower seed good for scratching food? (4) What per cent would you give on each one for scratching food? L. I. R.

Brookfield, Mo.

First prize Madison Square S. C. White Orpington cockerel. Owned by William Cook & Sons, Scotch Plains, N. J.

three times a week; about 2 oz. to each fowl.

Question.—(1) Is there any danger of feeding to much cut bone; if so, how much can be fed with safety? (2) Could cut bone be made to fill the place of wheat in feeding? (3) Will cut clover take the place of green feed? T. L.

Newburg, Ind.

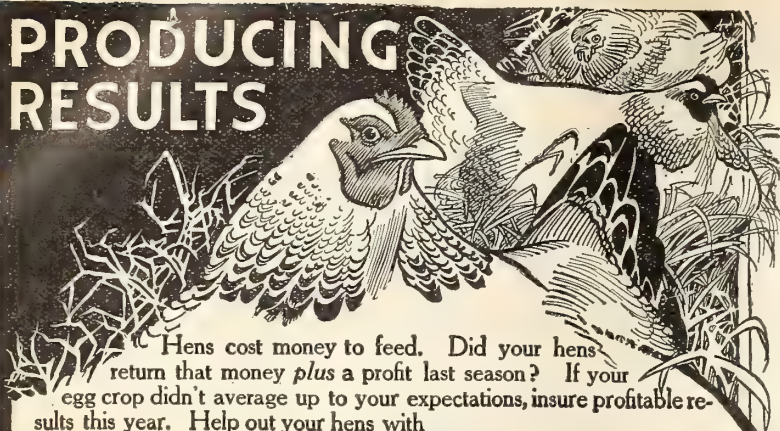

Answer.—(1) Two ounces to each fowl three times a week is sufficient. Too much raw bone will cause worms. (2) No. (3) Yes.

Question.—(1) Is toe punches a defect in show birds? (2) Would you advise one who is starting in poultry to

Answer.—(1) This is not recommended very highly as a food for fowls. (2) About 5 per cent. (3) Yes. (4) Middlings and shorts cannot be used. Wheat and oats, 40 per cent; barley and sunflower seed, 5 per cent; millet, 5 per cent. Cotton and flax seed we do not consider of much value.

Question.—What can be the matter with a rooster that breathes through his mouth and makes a wheezing noise? If he gets in a fight or gets scared he will stand with his mouth open as out of wind. He will stand and shake his head sideways and sometimes back up. He seems healthy and strong. I had him mated to ten hens and nearly every egg

PRODUCING RESULTS

Hens cost money to feed. Did your hens return that money *plus* a profit last season? If your egg crop didn't average up to your expectations, insure profitable results this year. Help out your hens with

Pratts POULTRY REGULATOR

(For 37 years called Pratts Poultry Food)

It doubles the value of your hens without increasing the cost of feeding. It helps the birds lay by keeping them healthy and vigorous.

There is nothing like it to prevent disease and cure common poultry ailments. By regulating the blood, bowels and digestive organs of the fowls, it overcomes all difficulties met by every poultry man. It increases the size of the fowls, adds luster to their plumage, makes the eggs fertile and helps the little chicks to vigorous growth. If used regularly, hens lay all the year. The cost is trifling, results are quick and permanent. 12 lb. bags, \$1.25. Costs less than 1 cent a month per hen.

Do not confound Pratts Standard Preparations with the numerous cheap imitations publicly condemned by experts.

P. H. DePre, Sec'y, 932 Jackson Ave., Kansas City, Mo.

hatched. He is a Single Comb White Leghorn. What can I do to cure him?
Lake View, N. Y. C. A. M.

Answer.—This is probably bronchitis, and can be relieved by holding his head over a kettle of boiling water to which has been added a few drops of carbolic acid, allowing him to inhale the vapor.

Question.—(1) I have corn, oats, wheat, bran, middlings (also grit, charcoal, oyster shells, etc.); how should I proportion the above feeds to get best results with May pullets? (2) I have some fine cockerels (May-hatch) from \$1 (each) eggs. What is the best ration to bring them to a vigorous maturity by the first of March next? (3) Should I keep them separate from the pullets? (4) Would oil meal be a good addition to the bran and middlings mash and in what proportion? (5) Will crowding these pullets for winter eggs be a detriment to their use for eggs for hatching next spring?
J. T.

Spencer, O.

Answer.—(1) Wheat and oats should be the principal feeds. The others can be used for a change once or twice a week. Charcoal can be fed in the mash. Grit and oyster shells should be before the fowls at all times. (2) Nothing better than first quality wheat. (3) Yes. (4) About 5 per cent of oil meal is recommended. (5) Yes.

Question.—(1) I have a flock of ten young geese that I raised this summer and I want to keep some of them over this winter, but I am unable to tell the geese from the ganders. Can you tell me of some way that I can tell them apart? (2) What is a good feed for geese in the winter? (3) How much green cut bone should I feed a flock of sixty hens in a day and how should it be fed to them? (4) What do you call a good feed for laying hens in the winter?
C. A. M.

Sahattus, Me.

Answer.—(1) The voice of the gander is much sharper than that of the female; the neck of the male is coarser and of a more masculine appearance. (2) Shorts and Indian meal, equal parts thoroughly moistened with cold water, but not too wet. (3) Eight pounds, three times a week. This can be scattered in the runs. (4) Wheat and oats, with a little whole corn at night in very cold weather.

Question.—(1) Which is the best breed of chickens, the Rhode Island Reds or the White Wyandottes? (2) Which would be the best for me to buy—pullets and cockerels or hens and full grown cocks? (3) The way I am situated, I will have to let my chickens run out part of the time, and I want to know if they will cross by this with other breeds. (4) If they do, then how long would I have to keep them enclosed before there would be no danger when I get ready to set my hens or incubator? (5) What is a good feed for all winter? (6) How many W. Wyandottes or R. I. Reds can be kept on an ordinary town lot successfully? (7) Can a person that can not read or write handle an incubator successfully?
J. B. T.

Huntersville, N. C.

Answer.—(1) This is a matter of opinion. In our estimation, one is as good as the other. (2) Pullets and mate with a cock. (3) They certainly will if allowed to run with other varieties. (4) Two to three weeks. (5)

THE WALTER HOGAN CO.
17 National Bank Bldg., Fergus Falls, Minn.

Wheat and oats, and in very cold weather a little corn at night. (6) 75 to 100. (8) Yes.

Question.—(1) Which are the most profitable chickens of different varieties? (2) Which are the most profitable of the Leghorns? Are Buff any better layers than the white? (3) Are rose comb chickens any harder than single comb? (4) Are Minorcas in any way the Leghorns' superior? (5) Are the Orpingtons in any way inferior to the Wyandottes? (6) Do you consider the R. I. Reds the Penciled Rocks' superior? Also, are R. I. Reds the Wyandottes' inferior? (7) Which would you advise a starter to begin with? Also, if chickens are better than eggs.

B. B. S.

Memphis, Tenn.

Answer.—(1) This is a question no one can answer, as it all depends on the man. (2) We believe one to be as good as the other. (3) No. (4) They are a larger fowl and lay a larger egg. (5) Not that we know of. (6) No, to both questions. (7) We never recommend one variety above another, as we consider all standard varieties good. Choose the variety that you think you will like. It is not so much the variety as it is the man. If you like your fowls and give them proper care and

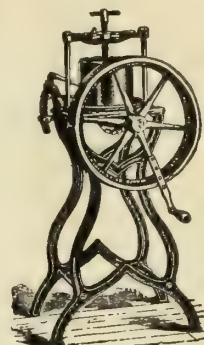

Home made colony coop, Ridge View Farm, Willoughby, Ohio

handle your business right, you can make a success with any of the popular varieties. If you have the money to invest, start with fowls, and buy only the best.

Question.—(1) What is the market price of poultry manure, barreled, as taken from dropping boards and stored in a dry place, and where can I sell it? (2) I have a few fowls that I would like to exhibit at some of the future shows. How must I proceed to get space, and is it necessary for exhibitors to be present daily, or do the associations have men to care for the exhibits? (3) I have a fine B. P. Rock cockerel which broke the center toe of one of his feet, leaving a lump when it knitted. Will this spoil him for exhibiting purposes? (4) Lately I have had the following trouble: The fowls' nostrils start running, oftentimes forming bubbles, then the eyes begin to froth, and in a short time become matted shut; at times I can take large lumps of cheesy-looking matter from them. The throats are inflamed and have yellow spots. The heads do not swell nor form sores. Occasionally one will make a noise like a gargle. I exile the sick from the flock and have been trying to doctor them. Have lost two out of a dozen afflicted. The remedy I use is of my own compounding, but it takes about two weeks and considerable

Successful Poultrymen Know

That the healthiest hens, the greatest number of winter eggs, and the earliest broilers result from feeding poultry green bone, properly cut.

Stearns Bone Cutter

Cuts green bone properly for hens and chicks. It works quicker, easier, and more economically than any other green bone cutter made.

QUEENS ARE FIREPROOF INSURABLE

The Only Incubator Company that Doubled Its Business in 1908.

trouble to cure them. Can you name the disease, which appears to be very contagious, and recommend a more speedy cure? W. H. R.

Carpentersville, N. J.

Answer.—(1) We do not know the market price. Correspond with some tannery in your vicinity. (2) Full information can be obtained from the secretary of the show. (3) This does not spoil him, but he will be cut for this defect. (4) This is roup in its worst form, and is very contagious. Procure a copy of Dr. Salmon's book, Diseases of Poultry, which will give you full information and remedy.

Question.—(1) Do all White Wyandottes have rose combs? (2) Is the chicken in your November Journal, called "Defender," a new breed of chicken, and where did it originate? (3) How much house room is required to winter forty chickens? (4) How many roosters are required to have good results in hatching chickens for two dozen eight-months-old pullets? (5) Is a young rooster, a brother to the pullets, all right to use, and the old one, the father rooster, too old, or would it be better to get a new one, not related to them? L. C.

Ward, Colo.

Answer.—(1) Yes. (2) This is an Indian Game and is not a new variety. See our new book for the origin of all varieties of poultry. Price, \$1.00. (3) 240 square feet. (4) Three. (5) Yes, for the first season.

Question.—(1) How much and how often should meat meal, bone meal or beef scraps be fed to 35 fowls? (2) How should commercial grit be supplied to the chickens? Is it as good to use as natural grit? (3) Are Golden Wyandottes considered good layers when properly cared for? (4) When should pullets hatched in May commence to lay? (5) Will dry bran tend to reduce the flesh of hens which are too fat?

Cooperville, Mich. Mrs. A. H.

Answer.—(1) About three times a week, two ounces to each fowl. (2) Fed in hoppers and kept before the fowls at all times. It is the best grit that can be given fowls. (3) Yes. (4) In January. (5) Yes.

Question.—I had a fine pen of R. C. Brown Leghorn breeders. Out of a few hatches from this pen I have received about twelve excellent cockerels and the same numbers of pullets. As their parents were rose combs I would think that the pullets and cockerels should also turn out rose combs. Such was not the case, for out of the twelve cockerels I received two single combs, and the one single comb seems nearly perfect, being better than any I ever bred. Out of the pullets I have received three single combs of excellent quality. This is a mystery to me, but I would be thankful if you would unveil that mystery. W. H.

Lansdale, Pa.

Answer.—This is no uncommon occurrence, and takes place in nearly all varieties of fowls. It is simply reverting back to the original stock which went into the production of this variety.

Question.—(1) What colored beak or bill have Brown Leghorns? (2) Can I

obtain a shipping crate large enough to ship six chickens in? (3) Where can I obtain crate? Mrs. S. V. Chesaning, Mich.

Answer.—(1) Horn. (12) Yes. (3) Any of the poultry supply houses or from the manufacturers. See our advertising columns.

Question.—(1) I have three varieties of fine bred chickens. They have a disease I do not understand. They sneeze and froth comes out of their bills. They gap for breath; somewhat resembling roup, only they don't loose their eyesight nor die, but don't get entirely over the disease. What is it and what is the cure? (2) I have the Blue Andalusians. Do you think they are hardy enough to stand this climate? (3) Do you consider them as good layers as the Brown or White Leghorn? W. H. Tremont, Ill.

Answer.—(1) Catarrh. Wash out the mouth and nostrils twice a day with boric acid solution of the strength of 15 grams to the ounce of water. Give following remedy: Gentian root, 4 drams; ginger, 4 drams; sulphate of iron, 2 drams; hyposulphite of sodium, 1 dram; salicylate of sodium, 1 dram. Pulverize and thoroughly mix. Give three or four grams a day. (2) Yes. (3) They are considered exceptional good layers.

Question.—(1) Should the Black Orpington chickens show green feathers or a greenish cast on some of them? (2) What color should the beak be? R. B. Hillsboro, O.

Answer.—(1) Yes. (2) Dark horn, shading to pinkish tint near lower edge.

Question.—(1) What is best to put on the dropping boards after they are clean? (2) I can purchase stale bread for 1 cent per pound. We can grind this up very readily in an apple grinder. How can we feed this to advantage? We keep one cow, two horses and 500 chickens. (3) How often should it be fed? (4) Is there any advantage in boiling wheat for poultry? (5) Can you give us any information regarding a concrete poultry house? We contemplate building a new house and would like it to be concrete, if practicable. (6) Can a concrete house be built that will be dry enough to be used as a storehouse for a year's supply of stock feed? J. R. G. Merchantville, N. J.

Answer.—(1) Coal ashes. (2) This can be used to advantage in various ways; can feed dry, mixed in the mash or soaked in sweet or sour milk. (3) Once a day. (4) No. (5) A concrete poultry house is practicable, but in building there should be air spaces left in the wall to avoid dampness. (6) Yes.

Make Your Hens Lay

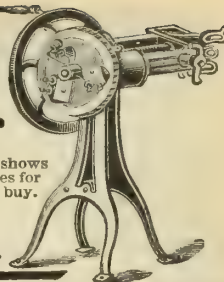

A small flock of hens will quickly pay for a Standard Bone Cutter by increased winter egg production. The only machine that cuts the bone across the grain, thus giving it by far the greatest feeding value. Positive automatic feed.

Standard Bone Cutter

Cuts green or dry bone, meat or gristle. Cut shows No. 8 machine, price \$10.50. Eleven different sizes for hand or power. Easy to use, easy to run, easy to buy.

Sent on ten days' free trial. Guaranteed best of all bone cutters. Write to-day for free catalogue and free trial plan.

STANDARD BONE CUTTER CO., Milford, Mass.

You Want Eggs Now

This is not the natural season for Hens to Lay; neither is it the natural season for Roses to Bloom; but it is NOW that Roses bring High Prices. So Do Eggs. Just as roses need forcing to bloom so do Hens Need Coaxing to Lay. Cyphers Full Nest Egg Food is made for the purpose. It will

Make Your Hens Lay

quicker by several weeks than if it were not fed to them. It is a concentrated meat food possessing tonic properties which promote health and good condition. Unlike most tonics it not only builds up the system but keeps it built up.

Cure Wheezing, Swollen-Headed, Moping, Germ-Infested Fowls of the Dreadful ROUP!

Don't let ROUP get the upper hand. Watch your birds for the symptoms, which are: Sneezing, wheezing, gasping, swollen heads, moping in dark corners. In later stages, there is stoppage of the mouth and throat with a hard, cheesy matter of very offensive odor. Roup is dangerous. See that the sick fowls get proper treatment, Conkey's Roup Cure is a reliable remedy, backed by a record of success.

CONKEY'S ROUP CURE

A Wonderful Remedy—Remarkably Successful!

This remedy comes in powder form and is easy to give. We have such great faith in it that we unhesitatingly offer to refund the price if it fails. Any dealer who sells you the remedy will make this guarantee good—at our expense. Conkey's Roup Cure is also valuable as a preventive. Prices 50c and \$1.00. If your dealer cannot supply you, we will. We make one remedy for each disease.

A Living from Poultry

ON A CITY LOT.

**\$1,500 in ten months from
sixty hens on a corner
of a City Lot.**

TO the average poultryman that would seem impossible, and when we tell you that we have actually done a \$1,500 poultry business with 60 hens on a corner in the city garden 40 feet wide by 40 feet long, we are simply stating facts. **It would not be possible to get such returns by any one of the systems of poultry keeping recommended and practiced by the American people, still it is an easy matter when the new PHILO SYSTEM is adopted.**

THE PHILO SYSTEM IS UNLIKE ALL OTHER WAYS OF KEEPING POULTRY

and in many respects is just the reverse, accomplishing things in poultry work that have always been considered impossible, and getting unheard-of results that are hard to believe without seeing; however, the facts remain the same and we can prove to you every word of the above statement.

THE NEW SYSTEM COVERS ALL BRANCHES OF THE WORK NECESSARY FOR SUCCESS

from selecting the breeders to marketing the product. It tells how to get eggs that will hatch how to hatch nearly every egg, and how to raise nearly all the chicks hatched. It gives complete plans in detail how to make everything necessary to run the business and at less than half the cost required to handle the poultry business in any other manner. There is nothing complicated about the work, and any man or woman that can handle a saw and hammer can do the work

TWO-POUND BROILERS IN EIGHT WEEKS

are raised in a space of less than a square foot to the broiler without any loss, and the broilers are of the very best quality, bringing here three cents per pound above the highest market price

OUR SIX MONTHS' OLD PULLETS ARE LAYING AT THE RATE OF 24 EGGS EACH PER MONTH

in a space of two square feet for each bird. No green cut bone of any description is fed, and food used is inexpensive as compared with food others are using.

Our new book, the PHILO SYSTEM OF PROGRESSIVE POULTRY KEEPING, gives full particulars regarding these wonderful discoveries, with simple, easy-to-understand directions that are right to the point, and fifteen pages of illustrations showing all branches of work from start to finish.

DON'T LET THE CHICKS DIE IN THE SHELL

One of our secrets of success is to save all the chickens that are fully developed at hatching time, whether they can crack the shell or not. It is a simple trick and believed to be the secret of the Ancient Egyptians and Chinese which enabled them to sell the chicks at ten cents a dozen.

CHICKEN FEED AT 15 CENTS A BUSHEL

Our book tells how to make the best green food with but little trouble and have a good supply any day in the year, winter or summer. It is just as impossible to get a large egg yield without green food as it is to keep a cow without hay or fodder.

OUR NEW BROODER SAVES TWO CENTS ON EACH CHICKEN

No lamp required. No danger of chilling, overheating or burning up the chickens as with brooders using lamps or any kind of fire. They also keep all lice off the chickens automatically or kill any that may be on when placed in the brooder. Our book gives full plans and the right to make and use them. One can be easily made in an hour at a cost of 25 to 50 cents.

A FEW TESTIMONIALS

Valley Falls, N. Y., Sept. 5, 1908.
It was my privilege to spend a week in Elmira during August, during which time I saw the practical working of the Philo System of Keeping Poultry, and was surprised at the results accomplished in a small corner of a city yard. "Seeing is believing" they say, and if I had not seen, it would have been hard to believe that such results could have followed so small an outlay of time, space and money.
(Rev.) W. W. Cox.

Oct. 22, 1908.
P. S. A year's observation, and some experience of my own, confirm me in what I wrote Sept. 5, 1907. The system has been tried so long and by so many, that there can be no doubt as to its worth and adaptability. It is especially valuable to parties having but a small place for chickens; seven feet square is plenty for a flock of seven.
(Rev.) W. W. Cox.

Ransomville, N. Y., Dec. 5, 1908.
Dear Sir,—Last spring we purchased your book, entitled the "Philo System," and used your heatless brooders last spring and summer. The same has been a great help to us in raising the chicks in the health and mortality, the chicks being stronger and healthier than those raised in the brooders with supplied heat. We believe this brooder is the best thing out yet for raising chicks successfully. We put 25,000 chicks through your heatless brooders this last season, and expect to use it more completely this coming season. We have had some of the most noted poultrymen from all over the U. S. here, also a large amount of visitors who come daily to our plant, and, without any exception, they pronounce our stock the finest and healthiest they have seen anywhere this year.
Respectfully yours, W. R. Curtiss & Co.

Skaneateles, N. Y., May 5, 1908
One article of the Philo System entitled "A Trick of the Trade," has been worth three times the amount the book cost. I saved on my last hatch fifty chickens, which are doing nicely.
W. B. Rease.

Send \$1, and a copy of the latest revised edition of the Philo System Book will be sent by return mail.

The latest edition has many pages of additional matter, and by ordering direct you are sure to get the latest and most approved book,

BETTER SAUSAGE—MORE LARD— LESS WORK.

Probably there is no more disagreeable work connected with farming than "hog killing." Butchering is a disagreeable job, but the preparation of the meat for winter keeping, making sausage and trying out lard, involves downright hard work of the roughest kind. Much of this labor can be avoided by having proper tools, and nothing will prove more effective than an "Enterprise" butchering outfit, consisting of an "Enterprise" meat and food chopper and an "Enterprise" lard press and sausage stuffer.

These are labor-saving devices of incalculable value, but they also increase the earnings from your hogs. This outfit will pay for itself in one season.

The "Enterprise" meat chopper chops meat quickly, uniformly and perfectly. It cuts the meat without crushing or grinding, so that each minute piece will retain all of its natural goodness and flavor.

This increases the value of your sausage—it's better flavored—better tasted in every way and will command a better price.

The drudgery of lard rendering and the hard work of sausage stuffing are overcome by the "Enterprise" sausage stuffer and lard press. You get more lard and better lard with this machine than in any other way, with one-tenth the work.

The "Enterprise" sausage stuffer has a patented corrugated spout which prevents air entering the casing, thus assuring the preservation of the sausage. You can't stuff sausage skins as effectively by hand nor with any other machine.

A most practical and economical way of increasing the yield from poultry is to get an "Enterprise" bone, shell and corn mill. Put a few cents' worth of dry bone, old shells or corn into an "Enterprise" bone mill and it will increase its value tenfold as a poultry food.

There's no food so good for poultry as variety nor a way to save money so easily as to grind your poultry food, using an "Enterprise" bone mill.

Send your name and address to The Enterprise Manufacturing Co., of Pennsylvania, 243 Dauphin street, Philadelphia, for a copy of the "Enterprise Housekeeper." This is a cook-book containing over 200 choice recipes and other practical kitchen helps.

CHEERFUL HENS LAY EGGS.

It is the singing, good humored hen that lays the eggs. Good humor means not only proper feeding, but also being kept warm and comfortable. Drinking ice water is a great egg retarder. The chill should be taken off the water. Hens want water often. It should be fresh, but not cold to chill the hens through and through. That's why the Automatic Non-Freezing Drinking Fountain advertised elsewhere is so valuable in the poultry yard. It takes the chill off. It is a frost-proof appliance that costs little, and it costs little to run it. Hens scratch and eat and drink and sing, and keep it up all day. It is an egg producing little device made by the Automatic Hatching Company at Flint, Mich., who make the celebrated Mother Hen Brooder, which warms chicks' backs and nerves by top heating. Write for their little circular No. 10, giving particulars.

One of the largest Rhode Island Reds breeders in the country is Mr. A. G. Clark, of Willoughby, O., who has developed and put upon the market probably one of the best utility strains of Reds in the country, known as the Ridge View Farm Reds. This farm raises as high as 2,800 birds a year, and they have paid particular attention to the development of the Red as a thorough utility fowl. Look up their ad in this issue and write them for particulars, and mention American Poultry Journal.

Bromo-Seltzer! How familiar this sounds to tens of thousands of people all over the world who have been relieved of nervous headache, mental exhaustion, nervous dyspepsia and disordered stomach. All of these ailments and many others are relieved almost instantly by Bromo-Seltzer. It makes a very palatable drink and has a soothing effect. For sale by druggists everywhere.

75c Pays for one year's subscription to American Poultry Journal and five years' subscription to Farm-Journal. Each subscriber will also receive a copy of the Lincoln Farm Almanac for 1909. See ad elsewhere in this issue.

E. R. PHILO, PUBLISHER, 14 Third St. Elmira, New York

POULTRY IN SOUTHERN NEW JERSEY.

The raising of poultry in southern New Jersey has passed the experimental stage and is one of the thriving industries of that wonderful section.

The influence of the Gulf stream and the proximity to the ocean make the seasons there very much earlier than they are less than a hundred miles further inland. Because of this the south Jersey farmer gets early crops, which bring the highest prices.

This section is near the Atlantic coast resorts, where the Easter season is becoming every year more and more extensive. Thousands of persons go to Atlantic City and the other resorts along the Jersey coast during Lent and remain until after Easter. During this period there is a big demand for squabs, broilers, eggs and other early produce by the great hotels along the coast.

In addition to this the very desirable markets of New York and Philadelphia are also within easy reach, thus opening up to the farmer and chicken raiser in this locality practically the best markets in the world.

The Daniel Frazier Company, 691 Bailey Building, 1218 Chestnut street, Philadelphia, Pa., has made a great success in selling small farms upon easy terms in this desirable and productive region. The Frazier Company has land within seventeen miles of Atlantic City and not far distant from Ocean City, Wildwood, Angelsea, Avalon and Cape May. This land is all very desirable ground for truck raising, the growing of small fruits and vegetables and the raising of poultry.

It is sold upon the very reasonable terms of \$5 down and \$5 monthly, the price of five acres of this well located, well drained, high and dry ground being \$100.

Two manufacturing towns and three

main line railroads are near this property, affording ample facilities for shipment and for purchase of supplies. This section of New Jersey, which is one of the garden sites of the earth, is being rapidly taken up by persons who desire to own one of these small farms. Of course as many as desired can be purchased.

The Frazier Company will send a handsomely illustrated booklet and detailed information regarding this country and its prospects, absolutely free, to anyone who requests it. The opportunity is open to white persons only.

IMPROVING ON NATURE.

It was but a short period ago that the poultry yard was left to the care of the woman on the farm. Then she listened for the cackling of the hen—nature's signal that the hen wanted to set. When the eggs were placed under the hen the woman of the farm waited anxiously for twenty-one days to see whether or not she had "counted her chickens before they were hatched."

Then along came the incubator, which was more or less of an experiment—sometimes the hatch was successful, oftentimes a failure. Gradually improvements began to appear in artificial incubation, lessening the uncertainty little by little. Many of these improvements are due to the ingenuity of Mr. H. M. Sheer, of Quincy, Ill., who has devoted his time during the last two decades to increasing the efficiency of the incubator and brooder, and today through his efforts it is possible to increase the size of your hatch and effect a material saving in the cost of incubator and brooder and the expense of operation.

Mr. Sheer, incubator specialist for twenty years, has published a book of simple and explicit plans, showing you how to build a thoroughly practical and labor-saving incubator and brooder for yourself, besides telling many interesting

and instructive things about incubators and brooders. In addition to the plans and instructions, the book contains illustrations and descriptions of numerous effective attachments which Mr. Sheer has invented for improving on nature's way of hatching chickens. While the value of this book cannot be reckoned in dollars and cents, all that Mr. Sheer is asking for it is 25 cents—to our mind a small price for such a valuable aid to chicken raisers. Mr. Sheer offers to return the money to anyone who sends in 25 cents for the book and then is not thoroughly satisfied; further, he allows any purchaser of the book to deduct the 25 cents from the first bill of supplies they may order. Thousands of the most successful poultrymen in the country have built their incubators according to Mr. Sheer's plans, and we believe it will more than pay those of our readers who are interested in chicken raising to obtain this book.

Bereaved Wife—I understand how expensive it usually is to provide mourning garments for a large family.

There is a way to do it, however, for a very small sum.

The Simpson-Eddystone solid black prints are very inexpensive dress-goods, yet they make up into beautiful serviceable dresses that will meet your needs for all occasions.

They are an intense black that will not fade. You can have at least two of these dresses for what one of ordinary material would cost you. I should think they would be just the thing.

The Deming Company, Salem, O., has just issued its 1909 Spray Pump catalogue. This catalogue is brimful of valuable reading and should be in the hands of every reader of American Poultry Journal. Send for one today.

IT MAKES HENS LAY

Neighbors Get Only Seven.
"I really don't believe I could possibly get along without Lee's Egg Maker. I get from 36 to 40 eggs every day, regardless of the weather, while my neighbors, who do not use it, get 6 or 7."
(Signed) Mrs. J. O. Chenoweth.
Dexter, W. Va.

SHE
GETS
36
DAILY

The above forcibly illustrates the difference between Lee's Egg Maker and other poultry foods. Our product is the result of more than 20 years actual feeding experiments of practical poultrymen. It furnishes those things the fowl must have to insure a maximum egg-production out of season. Don't be fooled by the kind that is just like Lee's—there isn't any either in appearance or result-giving properties. Try

Lee's Egg Maker

first and buy it on our guaranty to be the cheapest and best poultry food obtainable regardless of price.

Lee's Egg Maker is composed largely of granulated blood (deodorized), the most highly concentrated form of meat food, one pound of which is equal to 16 pounds of fresh beef. It is rich in protein—a natural poultry food that not only insures a maximum egg-production but makes fowls stronger, healthier, and more profitable in every way.

Buy it on our guaranty of an increased egg-production at a reduced feeding cost.

Prices: 25c to \$2.00 according to size.

A REMARKABLY FAIR OFFER.

In the advertising columns of this issue you will read the fairest and squarest offer we have ever heard of. Mr. H. M. Sheer, of Quincy, Ill., is offering for the small sum of 25 cents his large, very explicit and instructive book of plans for the building of incubators and brooders, and offers at the same time to refund the money if you are not satisfied with the book, and further, he agrees to credit you with 25 cents on your first purchase of any incubator supplies from him.

This book is certainly worth dollars to any poultry raiser and from our reading of the book we cannot see how it would be possible for even a child of twelve to fail to build an incubator or brooder that was perfect.

The directions are simple and easy to follow, while the different attachments that Mr. Sheer supplies are the best and most practical that we have seen.

Mr. Sheer has been identified with the incubator business for 20 years. He is the only incubator specialist in the world and probably understands more about artificial incubation than any other living man. He has patented numerous devices, all tending toward the increase in the percentage of the hatch and all in favor of the inexperienced operator.

He has letters from thousands of people who have never successfully hatched chickens artificially until they had read Mr. Sheer's book.

You will make no mistake in sending for this book at once.

ALL ABOUT INCUBATORS.

Everybody interested in chicken raising should read the Sure Hatch Incubator Company's new book. It gives more reliable, practical information on the subject of incubators than any book of the kind we have ever had the pleasure of reading.

The "Sure Hatch" has made a remarkable record as a successful hatcher, and when its makers give out information on the subject of incubators the public always learns something of real value.

The new Sure Hatch book not only explains the scientific side of artificial hatching, but tells why the "experimental" machines offered at "bargain" prices are such complete and dismal failures. It is brimful of interest from cover to cover. A free copy of the book can be obtained by addressing the Sure Hatch Incubator Company, Box 000, Fremont, Neb., or Dept. 6, Indianapolis, Ind.

Craig & Mapes, of Mt. Lebanon, Pa., won at McKeesport Poultry Association show, McKeesport, Pa., December 7 to 12, 1908, as follows: Buff Orpingtons—Cock, 1st and 2d; hen, 1st, 2d, 3d; cockerel, 1st, 2d; pullet, 1st, 2d, 3d; pen 1. Specials 2—Black Orpingtons—Cocks, 1st, 2d, 3d; hen, 1st, 2d, 3d; cockerel, 1st, 2d; pullet, 1st, 2d, 3d, 4th; pen 1. Specials 4—S. C. R. I. Reds—Cock, 1st, 2d, 5th; hen, 1st, 2d, 4th; cockerel, 4th; pullet, 1st, 4th. Specials 3—R. C. R. I. Reds—Cock, 1st; hen, 1st, 3d; cockerel, 1st, 2d; pen 2. Specials 3—Buff Rocks—Cocks, 1st, 2d, 4th; hens, 1st, 3d, 5th; cockerel, 3d, 4th; pullet, 3d; pen 1. Special 9—Cup for best display Buff Rocks, Eastern district; cup best cock, hen, cockerel, pullet and pen, Buff Rock Club. Cup for best display Orpingtons. Cup for best display R. I. Reds. Cup for best male Orpington. Cup for best female Rock, all varieties competing. Cornneau, Pierce, Burgott and Diefenderfer, judges; fifty Orpingtons.

Mr. P. A. Cook, of Wm. Cook & Sons, Scotch Plains, N. J., originators of all the Orpingtons, recently returned from a business trip to England, where he attended the Crystal Palace and several other shows and purchased many of the prize winners, and brought back with him one of the largest consignments of birds ever brought to this country. Mr. Cook reports that his business has increased to three times what it was last fall. Orders for eggs are now being booked, and it would be well to get in your orders early to be sure and get them, as the demand is always greater than the supply. Write them today for prices and particulars, and mention American Poultry Journal.

At the Chicago poultry show of the National Fancier's and Breeder's Association, held at Chicago, December 15 to 19, 1908, Frank Churchill Sibley, of South Bend, Ind., won ten prizes out of a possible twenty on Rose Comb Rhode Island Reds, as follows: 2d and 5th on cocks;

1st, 4th and 5th on hens; 1st and 3d on cockerels; 1st, 4th and 5th on pullets; also winning 1st on pen, and 1st on display; also the four club specials for shape and color and the display special for best flock of R. I. Reds, making a total of 17 prizes on 14 entries. This is one of the strongest showings made by any one exhibitor during this show, and is remarkable, considering the large amount of competition and the quality of reds, which were exhibited at this time.

Mr. Sibley's birds show quality in all ways. They have the typical Rhode Island Red type, also the color and size, and his yards stand, without question, in advance or at the head of all breeders of this class of birds.

Ira C. Keller, Prospect, O., won at the Greater Marion Show, November 17 to 21, 1908, on Golden Wyandottes; cock 1st and 2d; hen 1st, 2d and 3d; cockerel 1st; pullet 1st; pen 1st. On Silver Wyandotte cock 1st and 4th; hens 1st, 2d and 4th; cockerel 3d; pen 1st. Mr. Keller reports he has 1,500 head of the finest Silver, Golden, White and Black Wyandottes that he has ever offered to the public. They are open, clear laced all over, and have the color. The White and Black have the color and all have true forms and combs. He can give bargains in this stock in almost any numbers. He also has a very fine lot of cocks for breeding and show purposes. Write him for anything you need in the Wyandotte line, and mention American Poultry Journal.

O. L. King, the noted Barred Plymouth Rock specialist, who has for years been located at Walnut Grove, Ill., has recently moved to Rockford, Ill. He will continue to breed Barred Plymouth Rocks at his new home and invites visitors to look over his stock, as he has some of the best Barred Rocks he has ever produced. Write him at his new address, Rockford, Ill., for anything you desire in his line, and mention American Poultry Journal.

H. C. Sheppard, Berea, Ohio, proprietor of the Famous Poultry Farm and breeder of Sheppard's Anconas, reports that he has an exceptionally fine lot of Anconas this season and is prepared to fill orders for both exhibition and breeding stock. He is also booking orders for eggs and guarantees satisfaction with every sale. Write him for full particulars and mention American Poultry Journal.

M. Guckle, Kirkwood, Mo., won at St. Louis Poultry, Pigeon and Pet Stock Association, St. Louis, Mo., November 25 to 29, 1908, on Buff Leghorns, 2d and 3d, cocks; 1st, 2d and 4th, cockerels; 1st and 2d hen; 1st, 2d and 4th, pullets; 1st, pen; silver loving cup for best exhibit in Mediterranean class. Shove, judge.

W. W. Frantz, Waynesboro, Pa., manufacturer of Vermintrap Fowl Perch, starts his advertising with us this month. Mr. Frantz has solved the problem of getting rid of lice and mites in the chicken house. His eight-page circular will give you full particulars. Send for one today and mention American Poultry Journal.

T. A. Faulds, London, Ont., Canada, the Minora specialist, reports the following winnings at Guelph, Ont., Canada's greatest show: On Rose Comb Black Minorcas, cock 1st; hen 1st and 2d; cockerel 1st, 2d and 3d; pullet 1st, 2d and 3d. On Single-Comb Black Minorcas, cock 1st and 3d; cockerel 1st, 2d and 4th; pullet 1st and 4th, and all specials.

The Clipper Lawn Mower is advertised in this issue. This is one of the best lawn mowers manufactured and is just what every poultryman should have. This mower is manufactured by the Clipper Lawn Mower Co., Dixon, Ill. Write them for prices and mention American Poultry Journal.

Where can you find a **BIGGER BARGAIN**

**For Sending six subscriptions to American
Poultry Journal, the oldest, largest and
best poultry journal in the world**

You Get \$1.60

In value

We Get \$1.50

In value

This is how it is done

Get 6 subscriptions, at the cut rate price of 35c and we will not only allow you 60c commission, but will also send you, free, a copy of our new book, "Origin and History of all Breeds of Poultry." Regular price \$1.00. This is the greatest book on poultry ever published, and no poultryman or beginner should be without it. It contains 200 colored illustrations of fowls painted from life, by one of the best poultry artists in America. By these colored illustrations the beginner is able to know the exact color, markings, shape and comparative size of every recognized variety of chickens, ducks, geese and turkeys, (something no other poultry book contains, not even the Standard. It also gives a complete history and origin of all varieties, together with a complete description of each variety. Also tells how to mate the different varieties for best results. This book is better for the beginner than even the Standard.

The giving of this book for six subscriptions is for a short time only, to introduce our book, as you can readily see we cannot afford to continue this indefinitely. As soon as introduced this book cannot be obtained for less than \$1.00 cash. Therefore start right now and get six subscriptions at 35c each; keep 60c as your commission; send us \$1.50 and we will send you the book on receipt of same. This offer is for the first six subscriptions only.

But this is not all

winning any of the big prizes.

Below is the Tenth Annual Subscription offer of American Poultry Journal and besides getting \$1.60 in value for these six subscriptions we will also count these toward

Mica-Crystal

The Grit That Make Hens Lay Contains Mica, Iron, Magnesium and Quartz, each in its purest and best form. It is of such peculiar formation that it will not take a polish as is the case with white quartz or marble, and unlike limestone grit, or grit of like soluble substance, is not dissolved by the fluid, in the crop, consequently it never loses its sharpness. It sharpens itself by contact, the only grit that does, and therefore excels all others as a grinder. Without grit the feathered tribe cannot be healthy or productive. This is a well demonstrated fact in nature. Grit is to the fowl what teeth are to other members of animal creation. The standard for 15 years. Will send you small sample by mail if desired. Manufactured only by

MICA CRYSTAL CO.

CONCORD, N. H.

THE CHAMPION BROODER DOWN TO The Ground

Chicks run out directly on the ground, no platform to climb, no legs to break off. It's "the top notcher" in brooders. Used either out-doors or in-doors winter and summer; no need of expensive brooder houses if you use the Champion. Over 100,000 in use. Everybody delighted and "how they do talk" about them: "I will replace my high priced brooders with Champions." "I have used my Champion for six years and have raised hundreds of chicks in it. It's the best ever." "It beats them 'em all hollow, etc." New safety, No-chimney lamp. Absolute safety from explosion and fire. Largest in size, lowest in price. Only \$6.50. Catalog free.

PAGE FENCE 'JUBILEE YEAR.'

It's a pretty good record when a fence "stands up" for twenty-five years—and that is the record made by the Page Woven Wire Fence Co., of Adrian, Mich. This firm is celebrating its quarter-Centennial. Been making woven wire fence all the time, and at no time satisfied with anything less than the best that can be turned out.

And that's the outspoken opinion of your "Uncle Samuel," too, because when the United States government asks for bids on wire fence for government parks, Indian reservations, etc., the specifications mention that all bidders must figure on "Page fence or equal."

The manufacturers of this fence tell us that it is in use by more than 800,000 farmers, stock and poultry raisers, dairymen and fruit growers, and this is surely a pretty solid endorsement. One of the good points in the Page Fence is its entire lack of welded wires and short strands, the stay wire being one continuous piece, firmly secured at the top and bottom and wrapped three times around every horizontal. This construction prevents the horizontal wires from sliding up and down, thereby spreading and inviting stock to attempt to enlarge the opening. These horizontal wires are coiled lengthwise and are so elastic that even when stock stampedes into it or falling trees crush it it will spring right back into place again when the weight is released. It's a fence that Jack Frost can't damage either, when he turns his cold weather loose the fence contracts of course, but when the freezing spell lets up you'll find the fence in its original condition. It is a most accommodating fence to use on any and every sort of ground—over the hills—down in the hollows—it adjusts itself to any condition.

In honor of their "Jubilee Year," the makers of this fence have just issued a "Jubilee Edition" catalogue, which will be sent free for the asking. It tells how Page Fence is made, how liquid steel is tested, and gives many other bits of interesting information pertaining to the various processes of manufacture. A postal card addressed to Page Woven Wire Fence Co., Adrian, Mich., will bring it to you.

THE GRAND OLD "SURE HATCH."

Poultry Raisers Throughout the World Have Found It True to Name.

The Sure Hatch Incubator has won a host of warmly enthusiastic friends among the poultry raisers of America. Its fame extends to many foreign countries. Its makers have steadfastly followed the plan of putting the best material and workmanship into the machine. The improvements made from time to time have kept it well in the lead. Its record as a hatcher has never been excelled.

The tremendous success of the Sure Hatch has encouraged many manufacturers to imitate it, but these imitation machines have invariably proven failures. It takes long experience and a knowledge of scientific principles to produce an incubator like the Sure Hatch. The failures of cheap "experimental" incubators are responsible for big losses to poultry raisers. The beginner is easily influenced by "bargain prices." Knowing this, several firms have put out incubators, made of poor material and thrown together by inexperienced workmen, to sell as "bargains." They are good for kindling wood and that is about all.

We advise our readers to steer clear of such machines. If you are going to get an incubator the old reliable Sure Hatch is the machine to buy. It hatches every fertile egg. It requires so little attention that it practically runs itself. There is nothing complicated about it. Write for the new Sure Hatch book and learn how a real incubator is made. Address Sure Hatch Incubator Co., Box 6, Fremont, Neb., or Dept. 6, Indianapolis, Ind.

N. P. Easling, Pekin, Ill., won at Illinois Valley Fanciers' Association, Peoria, Ill., November 24 to 30, on S. C. White Leghorns, 1st, 2d, 4th and 5th cockerels; 1st, 2d, 3d and 4th pullet; 1st, 2d, 3d, 4th and 5th, hen; 1st and 5th, cock; 1st and 2d, pen; special for highest scoring male in show; special for highest scoring female in show; \$50 cup for two highest scoring cocks, hens, cockerels and pullets. First cockerel scoring, 95%. First pullet scoring 96. Sixty-three in class. Jas. A. Tucker, judge.

WATER POWER HELPS BUILD RAILROAD.

Electricity Generated from Mountain Streams Bores Through Mountains—Will Also Drive Trains Through Tunnels.

Never before in the history of railroads was a great building project carried out so quickly as the Pacific coast extension of the St. Paul road. In this great undertaking, which means so much to the Pacific Northwest, more than \$100,000,000 is being expended with as little fuss as an ordinary business enterprise would make in expending a few thousand dollars. The St. Paul road is not coming into a country that needs the aid of the promoter or the land agent. In timber alone there is almost a competency for the new line, for the St. Paul management has been given assurance that not fewer than 50,000 carloads will be given it the first year after the work has been completed.

One of the wonderful facts regarding the construction of this new trans-continental line, which will stretch from Chicago and the Twin Cities by the way of Butte, Mont., to Seattle and Tacoma, Wash., is the thoroughness with which it is being constructed. It is not generally known, for example, that over the 800 miles of mountain stretches electric-

ity is to be used as the motive power, and the engines will be 200-ton electric motors. Down the sides of the Bitter Root mountains are pouring a sufficient number of streams to furnish abundant power for all of the electric motors which the St. Paul will need to handle its trains over the mountain division. These streams are to be harnessed at the cost of millions. The boldness of conception and the unobtrusive way in which the work is being executed challenge admiration. Through the fastnesses of the Bitter Root range a tunnel 8,750 feet long is being constructed by electrical power and through it will be operated trains hauled by motors. One end of this tunnel will open in the state of Montana and the other will land the traveler in Idaho, and its grade will not exceed .02 of 1 per cent.

In general the work on the west end of the road between Butte and Seattle is nearly finished on some of the divisions, but the long tunnels and the heavy fills will take some time to complete. Rails are now laid in five different sections, but the track is not continuous for more than 120 miles. On the Seattle-Tacoma line the track has been finished from Black River Junction to Summer, Wash. East of Seattle the road is completed for a distance of seventy-five miles, and work over the Snoqualmie Pass of the Cascades is being rapidly pushed. On one division there are at least sixty fills to be made of an average depth of seventy feet, and the road between Black river

and the tunnel will cost probably \$75,000 a mile.

Through the St. Paul Pass, in the Bitter Root mountains, work is further along; the grading is completed and the bridges are built. In Seattle the terminal work is scarcely begun. In view of the fact, however, that the greater part of the extension has been done during a time of financial depression, the work in general is a marvel in the annals of railway construction.—Exchange.

J. C. Fishel & Son, Hope, Ind., the noted White Wyandotte breeders, report that they have an exceptionally fine lot of exhibition and breeding birds with which to supply their trade this season. This firm has been breeding White Wyandottes for a good many years and have established a reputation for their stock that is second to none in this country. This reputation has been established both in the show rooms and in the breeding yards of their customers. There is an individuality about the Fishel White Wyandottes that cannot be found in any other strain. This firm has also established a reputation for themselves—a reputation for honest dealing and for giving full value for money received. They have recently issued a very elaborate catalogue which tells all about the Fishel White Wyandottes and gives other information that is of value to our readers. Send for one and get acquainted with a firm that will use you right.

"Her Egg Basket Is Always Filled"

Don't You Want More Eggs?

Try our way
FREE

YOUR hens can't lay eggs in abundance, unless they have egg-making food, in abundance. That's true because every atom they use in making eggs must come from the food they eat. It stands to reason then, that for the best results you must feed foods rich in egg-making materials. What are they? Let us see—

Nature knew what she was about when she made Cock, Hen and Chick relish a nice, juicy worm or a good fat bug above everything else.

They relish such food, because it is rich in what the professors call "protein"—and protein is what fowls need, not only to make eggs, but also to make bone, muscle, flesh and feathers, as well as to maintain vigor and vitality.

That is why the hen craves bugs and worms—or some such food rich in protein.

nothing else will;—Why it improves the vitality of the entire flock;—Why it makes red combs, bright eyes and glossy plumage;—Why it enables your flock to produce more fertile eggs, larger hatches and stronger, livelier chicks.

Why it promotes growth and development, giving you earlier broilers, earlier layers, and larger market fowls;—Why it more than doubles your poultry profits.

It is cheapest because it is richest in the food elements fowls most need, and because it costs you but little more than the labor of cutting it. It is the best because it contains these elements in their most digestible form, and you know exactly what you are feeding—as you cannot know when you use

so called "beef scraps" or the ready-mixed commercial foods, or the advertised "poultry foods" made from secret formulae, for which such extravagant claims are made. You have to buy them "on faith;" you don't know what they contain.

Fresh, raw bone is greatly superior to "beef scraps," because the cooking and embalming and preserving and drying of the scraps destroy nearly all their value.

Experiment stations and thousands of poultrymen have proved the value of green bone. Can you afford to ignore such valuable food?

The best machine for preparing green bone .s

Mann's (Latest Model) Bone Cutter

Mann's turns easily and rapidly, cutting all green bone with all adhering meat and gristle, never clogging; never leaving chunks or slivers, wasting nothing.

Its self-governing feed automatically adapts the cutting to your strength, so that any one can use it.

Its open, hinged cylinder is easily cleaned and takes in large bones.

It is strong, durable and requires few repairs. We want you to try one

It's a natural instinct for that something which builds up eggs and maintains good conditions.

* * *

Now, animal matter or foods, are rich in protein, while only limited quantities are found in the grains and vegetables usually fed.

But hens don't get worms and bugs in winter nor when yarded.

Therefore you must provide something to take its place if you expect to get the best results from your flock.

What is that "something?"

The best thing yet discovered is raw, green bone—the fresh trimmings from the meat market—bones with meat and gristle adhering—fresh cut and uncooked.

Analysis shows that such raw bones and gristle—beef, pork or lamb—contain the same food elements as the bugs and worms.

They therefore make a perfect substitute—not something "almost as good," but identically the same. A food rich in protein, and which costs but little more than the labor of cutting it.

It contains more than four times the protein and egg-making materials of grain, and is rich in all the elements that go to make eggs, bone, flesh and feathers.

That is why it makes hens lay as

GREYSTONE POULTRY FARM F. H. DAVEY, Mgr., YONKERS, N. Y.**HAVE HIGH-PRICED EGGS.**

New Method of Poultry Feeding, Guaranteed to Increase Winter Egg Production.

A plentiful yield of eggs when winter prices are highest, that much to be desired condition of things from the poultry raiser's point of view, seems at last to be an easy possibility. It is only necessary to feed the proper quantity of cut green bone, properly prepared. The bone must be finely cut, however, to produce the best results.

Those who have used the Standard Bone Cutter, made by the Standard Bone Cutter Co., of Milford, Mass., report an increase in egg production that is simply astonishing. This machine is built on a new principle, and is said to be superior in every respect to all other bone cutters. In fact, the makers guarantee this to be the case, send the machine on 10 days' trial, and allow the customer to decide for himself.

Standard Bone Cutters are the only bone cutters that cut bone across the grain, putting it in the best possible condition for feeding purposes. They are easy to run, cannot clog, and have positive automatic feed. Made in eleven different sizes. The makers, the Standard Bone Cutter Co., Milford, Mass., will send illustrated catalog and free trial order blank, to any address on application.

EXTERMINATING RATS.

The extermination of rats and mice has always been a difficult problem for the poultry-raiser, as the usual means are objectionable on account of their being dangerous to other life. It is, therefore, gratifying to note that bacteriological science, which has made such wonderful progress in the combat of disease, seems to have successfully solved the problem of destroying rodents scientifically and without danger or other objectionable features.

The Pasteur Vaccine Co., Ltd., of Paris, with New York and Chicago branches in this country, furnishes a virus called "Ratite," which is distributed on bait and in the course of a few days causes a contagious and mortal disease among the rodents partaking of the bait. The virus and the disease caused by same are harmless to all other life, so that the bait can be placed where the rodents are most troublesome with perfect impunity. Another big advantage in using the virus is that there are no unpleasant results in the way of dead rodents being found; they simply disappear.

The virus has been tried by boards of health, poultry raisers, grain people, etc., who are very much troubled with these pests and who have found the ordinary means of exterminating them unsatisfactory. If you are one of those who are anxious to clear their premises of rodents, we would suggest that you immediately write the Pasteur Vaccine Co. for further particulars.

EGGS IN WINTER.

When eggs are highest in price and the hens won't lay, there is something wrong with the way they are fed.

Give them about the same kind of food as they would pick up in summer, experienced authorities tell us, and nature will do the rest.

When it is remembered that cut green bone easily takes the place of bugs and insects and makes the hens lay even when it's zero, it is not surprising that poultry keepers are rapidly adopting cut bone as a feed.

One of the quickest and best ways to prepare bone is by using what is known as the Crown Bone Cutter, made by Wilson Bros., Box 600, Easton, Pa.

This firm has had long experience and their machine is very widely used. They have issued a complete catalogue on the subject, which they will send you if you ask for it.

Macon A. Green, Columbia, Tenn., breeder of Rose Comb Rhode Island Reds, won the following premiums at the Poultry show, held at Pulaski, Tenn., the 26th, 27th and 28th of November: 1st and 2d cock; 1st, 2d and 3d hen; 1st pullet, and 2d hen. He only lacked 7/8 of a point winning 1st pen. He also won the premium offered for the highest scoring Red.

If in need of Buff, White, Black or Diamond Jubilee Orpingtons read F. C. Bailey's ad on another page.

Bronze Turkeys

We are in position this season to give you better value in **BRONZE TURKEYS** than ever before. EFFECTIVE ADVERTISING.

Every poultry advertiser wishes to spend his money in the manner which will bring him the best results, because the object of all advertising is profit. We recently learned that one of the A. P. J. advertisers was securing splendid results from their advertisements appearing in this paper, even during the summer months, and we concluded that it might be helpful to all poultry people to obtain from them a statement of their plan or method by which they are making all-year-round advertising pay. In response to our inquiry we received the following courteous letter which, with their permission, we have thought best to publish in full:

RIVER HOME POULTRY YARDS.
Thos. H. Tracy, Owner.
Frank J. Stamm, Manager.

Perrysbury, O., December 5, 1908.
American Poultry Journal, Chicago, Ill.
Gentlemen: In advertising our River Home Light Brahmas and River Home Barred Rocks, we have constantly kept the following facts prominently in view, viz.:

1. We want to do business the year round the world round, and therefore we advertise twelve months in the year. All the year round interest in poultry must be maintained in order to succeed. This cannot be accomplished by advertising only a few months in the year. A large part of the interest in a poultry paper is its well worded and attractive advertisements. The average reader glances through the advertising pages of any periodical before he reads the regular articles. It is not, therefore, fair to the poultry publications, to their readers or to the poultry industry for breeders to entirely drop their advertising during a large part of the year.

2. We tell the truth in our advertisements, and do not overstate the facts. Many readers are disgusted rather than attracted by an advertisement which makes absurd and extravagant claims. We do not advertise that River Home Light Brahmas and River Home Barred Rocks are better than any other, because

this would be a meaningless statement, calculated to convince no one, and would probably offend many. We do advertise, however, that they are "As good as the best, and better than the rest," and this statement is effective because its truth is always demonstrated by our customers and ourselves in the best shows wherever our stock is exhibited.

3. We aim to have our advertisements attractive and instructive by making them readable with current matter telling about our stock and our methods, including descriptions of our modern plant.

4. We try to get acquainted with our customers by our advertisements and correspondence, and especially by having them visit us. In our advertisements we invite all interested persons to visit us any day except Sundays. Poultry people come hundreds of miles to inspect our stock and plant, and always leave as our friends and patrons. If breeders have their stock and premises at all times in condition to be inspected they should let that fact be known in their advertisements.

5. We answer all correspondence promptly and give full and honest value, and guarantee to satisfy every purchaser or refund the money.

6. We find the American Poultry Journal one of our best mediums. It brings a large number of inquiries which result in sales, and the inquiries are from breeders and poultry people who appreciate good stock and are willing to pay reasonable prices.

If you think this letter will be of any interest to your readers and advertisers you have our permission to publish it. Yours very truly,

RIVER HOME POULTRY YARDS.
By F. J. Stamm, Manager.

We believe that there are many suggestions in this letter which can be profitably adopted by those who wish to do a successful poultry business. Advertisers cannot expect to keep in close touch with the poultry trade by advertising only a few months in the year.

W. W. Kulp, Pottstown, Pa., won at Norristown pet stock and poultry show, December 1, 1908, on S. C. Leghorns: 1st and 2d, cocks; on S. C. Brown Leghorns, 1st, cock; 1st, 2d and 3d, hen. Denny, judge.

ROUPY hens never lay. If you have Roup in your chicken yard, you will lose money. Separate the sick birds from the well, and get a package of

Pratts
ROUP CURE

Don't waste time and risk losing your birds with an imitation—always get the genuine Pratts. There is nothing to compare with it as a cure and preventive of Roup, Colds, Canker, Catarrh and kindred diseases.

Keep a package of Pratts Roup Cure on hand all the while and you will keep Roup out of your chicken yard and save many dollars. The cost is small, the dose is small—one package lasts a long time.

If your dealer cannot supply you, send us his name and 25c. and we will mail you a package postpaid

125 Egg Incubator and Brooder Both For \$10

For \$10

Freight Paid

Why pay more than our price! If ordered together we send both machines for \$10.00, and pay all the freight charges. Hot water, double walls, dead-air space between, double glass doors, copper tanks and boilers, self-regulating. Nursery underneath the egg tray. Both Incubator and Brooder shipped complete, with thermometers, lamps, egg-testers—all ready to use when you receive them. All machines guaranteed. Incubators are finished in natural colors showing the high grade lumber used—no paint to cover inferior material. If you will compare our machines with others offered at anywhere near our price, we will feel sure of your order. Don't buy until you do this—you'll save money. It pays to investigate the "Wisconsin" before you buy. Send for the free catalog today, or send in your order and save time.

WISCONSIN INCUBATOR CO., Box 21, Racine, Wis.

BUILD YOUR OWN INCUBATORS AND BROODERS

and Save One-Half the Purchase Price

Anyone can do it with my Plans. I furnish the mechanical parts, Lamps, Regulators, Heaters, etc., at low prices. You simply make the box or case. Many thousands have done it and I have yet to learn of a single failure. For only 25c to cover cost, I will send you prepaid my big illustrated book of plans and catalog, worth dollars to you. These plans are so simple, the instructions so complete, it is impossible for you to go wrong. You save half the purchase price and get the advantage of my exclusive patented features not found on other machines. Most prominent among these are

My Acme Tandem Thermostat and Acme Trip Burner,

with combined damper and flame regulator—will save half the oil, labor and cost of operation.

These wonderful inventions are not to be found on any incubator you buy. I do not sell or build incubators—I only manufacture incubator supplies. I have been an incubator specialist for 20 years—the only one in the world. When you get my book you will see how easy it is for you to build a high-grade, practical Incubator or Brooder, having many exclusive features (all in favor of the inexperienced operator) which are not found on any other make.

My New Acme Tandem Double-Compound Thermostat, the most powerful, accurate, durable and reliable thermostat ever invented, will increase the efficiency of any incubator or brooder—it marks a new era in artificial incubation, in heat regulation—it eliminates all regulation troubles.

TANDEM THERMOSTAT

My Acme Lamp is the safest and surest known—can't upset—no danger of fire.

My Automatic Ventilation System insures perfect hatch without an experienced operator.

ACME TRIP BURNER

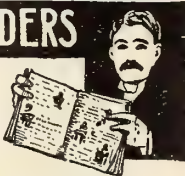

My New Tubular Tank, with heat retaining and distributing bars, produces a uniform temperature throughout the egg chamber, using one-third less oil than any other system of heating.

If You Have an Incubator or Brooder

It will pay you to send for my plans and catalog, then at a slight expense you can remodel your old machine and make it a profitable and permanent investment.

Write today and let me tell you all about my Lampless Brooder which costs you less than \$4 to build. No lamp—no tank—no expense to operate. You cannot lose. If you are not satisfied after you have looked over the book of plans, send it back and I'll return your money and postage. If you keep the plans and catalog, I'll allow you 25c on your first order. You have all to gain and nothing to lose—send for book today.

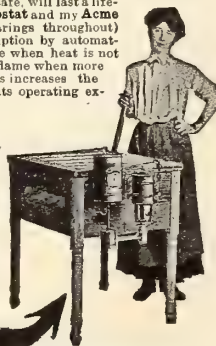

H. M. SHEER, 400 Hampshire Street, Quincy, Ill.

My Acme Trip Burner

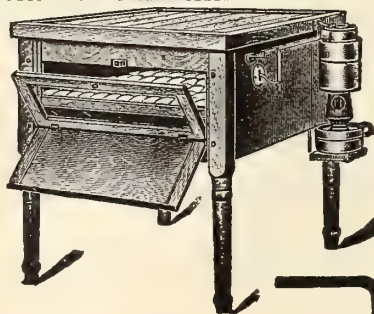

will make 20% more heat with less oil

than any other burner. The combustion is perfect. The wick never chars. Absolutely safe, will last a lifetime, and with my Tandem Thermostat and my Acme Regulator (having knife-edge bearings throughout) saves 50% in oil consumption by automatically lowering the flame when heat is not needed and raising the flame when more heat is required. This increases the hatch, saves time and worry, and cuts operating expenses in half.

The Biggest "Money's Worth" Ever Offered in an Incubator

The only way we could put more value into the Sure Hatch would be to make the hinges, catches and other fittings of solid gold. Just as it stands, with its Redwood case, copper heating system, Patent Regulator, Safety Lamp, and scientific construction throughout, it is the most perfect and satisfactory hatching machine that has ever been produced. And the price is so low that no other maker can meet it without using cheap material and slipshod work.

The Sure Hatch Incubator is a \$100,000.00 Machine

This Enormous Investment Required to Produce and Market the Sure Hatch at the low prices we are making

We own and operate the largest incubator factory in the world.

The Sure Hatch represents an investment of over \$100,000.00. Only by having immense factory facilities and tremendous output, are we able to sell these machines at the low price we offer this year. Our capacity of

100,000 machines a year puts us in a position to buy raw materials in greater quantities than competitors, and at lower prices. We pass the saving along to our customers. Our low prices prove it. Ask for the figures and see for yourself.

Free Book That Hits the Nail on the Head Yours for a Postal Card. Write for it This Minute Lest You Forget

The new Sure Hatch Book is making everybody who is interested in incubators "sit up and take notice." It tells some plain truths about the incubator business. Warns the public against some of the "fake" machines and "imitation" incubators that are simply made to sell. Shows the difference between a high-grade guaranteed machine like the Sure Hatch and incubators that hatch nothing but trouble. Good reading from

start to finish, and crammed full of valuable pointers. Yours for the asking. Send for it now, while you have paper and pencil handy. Address

RAISING CHICKENS FOR PROFIT.

People who have a little spare ground around their homes could put it to no better use than for the raising of chickens.

It is not only the farmer nowadays who goes in for poultry culture, but there are thousands of others who start with a dozen or even half a dozen fowls and who find the diversion not only interesting, but very profitable.

Poultry breeding is now settled upon a sound basis, and is becoming more and more remunerative every year. The great inducement, aside from the pastime it affords, is found in the high prices that eggs bring in the cities. It requires good care and common sense to attain complete success, as hens lay only when in prime condition, and to have to feed fowls that produce only occasionally or not at all, is bad business and cuts into profits.

To keep all the hens laying all the time, it is necessary to have some knowledge of their physical organisms and, whenever necessary, to assist nature. Then again, there are hens that lay one day and are off their feed the next, so that one needs to have constantly at hand a preventive as well as a cure.

There are many different kinds of preparations and remedies for sick chickens on the market, but the best ones of all are those made by The Pratt Food Co., of Philadelphia, a house that has been studying the ills of chickens for over 37 years.

Their remedies are made of the most carefully selected ingredients of the highest grade—all scientifically mixed and blended together in just the correct scientific proportions.

Those interested in the raising and breeding of chickens will be interested in the experience of Mr. Chas. Welling. Mr. Welling started with only 25 hens, and in one year, took to market 2,740 eggs, which brought \$54.80, and sold chickens to the value of \$67.32. This would make a total of \$122.12. He claims that this is a record and voluntarily attributes his success to the continuous use of Pratt's Poultry Regulator. Mr. Welling's total bill for feed, including the Regulator, was \$32.70. Subtracting this bill from the total, we find that Mr. Welling's profits were \$89.42. A splendid showing indeed from such a small flock.

This is only the experience of one, but there are thousands of others who have been thoroughly convinced, by actual demonstration, that it pays to use Pratt's Poultry Regulator.

Pratt's Poultry Regulator is a guaranteed egg producer—it increases the size of fowls—makes the comb a bright red—makes the eggs fertile—makes little "chicks" grow quickly—improves the flavor of the flesh—and also prevents and cures all poultry diseases.

The Pratt Food Co. have recently published "Pratt's New Poultry Book," which will be worth its weight in gold to all those having chickens. It is free for the asking.

SEED BUYERS PROTECTED.

The buyers of seed have had very little protection and many gardeners hesitate about buying seed on account of not knowing whether they are getting seed of high germination. This is an important matter for it means much to the farmer or gardener, and it pays to get seed that can be depended upon.

We are very glad to report that there is one reliable seed company which is giving their customers an ironclad guarantee. We find that the A. A. Berry Seed Co., Clarinda, Ia., guarantee all their seeds to be fresh and of high germination and any of you who need seeds will do well to write them for their new 1909 100-page descriptive catalog, which will be sent free.

Their ad. appears in another column.

Nate K. Cornwall, Thamesville, Ont., Canada, the noted Buff Leghorn breeder, is keeping his birds up to the usual high standard and at the late Guelph, Ont., show won 1st and 3d cock; 1st and 2d hen; 1st and 3d cockerel; 2d, 3d and 4th pullets and 9 specials and silver cup. There is no better birds anywhere than those bred by Mr. Cornwall. Write him for prices and mention American Poultry Journal.

Pays for one year's subscription to American Poultry Journal and a copy of "How to Build Poultry Houses—A 64-page book on poultry house construction.

AN INVALUABLE STRAWBERRY BOOK.

We are just in receipt of a copy of the 1909 edition of R. M. Kellogg Company's "Great Crops of Strawberries and How to Grow Them." This book has already become famous wherever strawberries are cultivated, but this edition excels in practical value, as well as in typographical beauty, all previous issues. It is a veritable picture book, containing more than 100 beautiful half-tones, and in no other book which we have seen is there so much condensed information and instruction as to the how and why of strawberry culture as we find in this book. It is written in such a style as to arouse the enthusiastic interest of all lovers of the strawberry, and it should be in the hands of all who wish to achieve the highest success with this most delicious of the small fruits.

Not the least interesting feature of this book are the facts and figures it contains relating to the famous Kellogg farm itself. From these we learn that the farm consists of 220 acres of as fertile land as may be found anywhere. Each year 100 acres of strawberry plants are grown. In 1908 there were 292 miles of plants on the farm, which would make a continuous row extending from Chicago to Detroit and 28 miles beyond into Canada.

To cultivate these plants during the growing season of 1908 required that the men who followed the cultivators travel 17,520 miles. What this means may be comprehended when it is understood that this equals five trips from New York to San Francisco, with 1,165 miles to credit on the sixth trip. The number of plants grown annually is somewhat in excess of 20,000,000.

To spray these great fields requires 22,500 gallons of material. To fertilize them requires more than 2,000 tons of manure each year, the freight bills on manure in 1907 alone amounted to more than \$1,700. Each fall these great fields are mulched with straw, and 350 tons of fresh straw are annually purchased for this purpose. In shipping these plants sphagnum moss is employed to protect and keep them moist, and it requires 40 tons of this material for this purpose. The annual post-

age bill of the company averages between \$7,500 and \$8,000.

As reflecting the comparative value of the Kellogg plants, it is interesting to know that, while the average production the country over, according to the census reports, is 1,700 quarts to the acre, those who grow fruit from the Kellogg thoroughbred plants produce from 8,000 to 15,000 quarts to the acre. We find in this book the statement from C. J. Wigen, of Creston, B. C., that in the season of 1908 he picked 53,000 quarts of Kellogg strawberries from four acres of land.

The R. M. Kellogg Company's wonderful strawberry plant farm is located at Three Rivers, Mich., and we advise our readers to send for a copy of this book if they would learn very much of value relating to strawberry production in all its phases. The book is free to all of our readers who will ask for it.

A MONEY-MAKING POULTRYMAN.

The most expert poultryman in this country today is Mr. Fred Grundy, of Morrisonville, Ill. Mr. Grundy proved his claim, to the above title by clearing over \$12,000 in a remarkably short time, producing poultry and eggs for market. He did not do this by managing his poultry as people generally manage it, but by a method he worked out through a series of intensive experiments, extending over several years. His method of hatching and raising chickens is superior to any other known. The hatcheries, lampless brooders, feeders, water founts and other appliances he uses are his own inventions, and are the most practical and inexpensive of any in use. He is an expert on feeding chicks, feeding for eggs and fattening stock for market, and his Perfect Food is far ahead of any yet produced. It costs only 8 to 15 cents a bushel and is so easily and quickly prepared, and gives such splendid results that every poultry raiser should use it. It is not sprouted oats or any "processed" feed, but a plain, easily prepared mixture which not only breeds the eggs, but also keeps the digestive organs of both hens and growing stock in perfect condition for the best results. Mr. Grundy's book, "The Famous Grundy Method," contains his entire method, and

also complete specifications and full descriptions of all of his valuable and helpful inventions, which anybody can make. Every purchaser of this book is given the full right to make, for his own use, all these inventions. Thousands of poultry raisers who have purchased this book declare that it is worth its weight in gold. Eight large editions have been sold and the ninth is now on the market, and every poultry raiser should avail himself of this opportunity to secure a copy.

NOTABLE POULTRY BOOK.

Excellent Guide—Timely Suggestions to All Who Raise Fowls of Any Description.

One of the most complete and thoroughly practical works of its kind that has come to our attention is a handbook of convenient size, entitled "Greider's Book on Poultry," issued each year by B. H. Greider, a recognized authority on this subject.

The edition for 1909 illustrates sixty of the leading strains of chickens, turkeys, ducks, geese and pigeons, and gives information as to their qualities, characteristics, etc., that could scarcely be had from other sources. Various chapters of the book are devoted to breeding, building houses and equipment, care and prevention of disease, egg production, etc., respectively, so that no important points are left untouched.

One of the special features of the 1909 edition is fifteen chromos, illustrating as many breeds in the attractive colors of their plumage. Some space is also devoted to Greider's Germicide, a preparation originated by Mr. Greider and said to be very effective in ridding fowls of lice, mites and disease.

This book, which is bound to please every poultry enthusiast, will be mailed for 10 cents, in coin or stamps, by the author, B. H. Greider, Rheems, Pa.

J. C. Fishel & Son, Hope, Ind., won at Springfield, Ill., on White Wyandotte: cock 2d, cockerel 1st, hen 1st, pullet 1st, breeding pen 1st. Heimlick & McCord, judges.

Miller's Ideal

The Good Incubator at a Low Price

We've got both the Incubator and the Price right. There's no excuse for your buying anything else than a standard Ideal Incubator or Brooder. Remember, experimenting with incubators is costly business.

Get My Low Price

Get My Big Book

I know I've got the Incubator and Brooder that poultry raisers want. My Ideals make records wherever they go. More and more thousands are being sold every year and they all tell the story of better results and better profits.

But still more thousands of poultrymen ought to be using them. I am determined that this year nobody shall be kept from buying my famous Ideals on account of price. I want poultry raisers everywhere to know that these celebrated Incubators and Brooders are being sold this year at just about the same price you will have to pay for inferior machines or for unknowns.

Send For Free Catalog of These Record Making Machines

I want you to know the machines and I want you to know the price. That will keep you from making mistakes. My book, "Poultry For Profit," is the greatest book of the kind published. It contains 128 pages, brim full of reliable information and tells all about Ideal Incubators and Brooders. Profusely illustrated. Over a score of full-page illustrations of fine poultry and many other pictures reproduced from photographs. I send this book free, postpaid. Write for copy. Don't wait.

Send for it today. Address

J. W. MILLER COMPANY

Box 56, Freeport, Illinois

SOMETHING NEW IN ARTIFICIAL INCUBATION.

Mr. Charles A. Cyphers invents an automatic moisture regulator that controls the humidity in the hatching chamber of incubators, in the same manner that the temperature has been controlled for many years. When asked about it Mr. Cyphers grew reminiscent. We let him tell the story:

"To hark back to the early experiences of the chicken man, not a few of the old timers have had their experience with the 'hot water jug' incubators, the incubators in which a measured amount of warm water was poured into a heating tank after the same amount of water that had lost its heat was drawn off. The boxes, and they were little more than boxes those days, had heavily packed walls, and this was the only means of keeping a hatching temperature. Many of these machines were in use fifteen years ago and, in fact, it is the French peasants' hatcher of today. Supplied moisture was used, but practical heat regulators were not invented.

"Next came the hot water incubator with lamp attachment to keep up the heat; and shortly thereafter the expansion and contraction of the water in the heating tank was taken advantage of to operate a float connected to a lamp trip for reducing the flame; thus the temperature of the water was regulated, and approximately the temperature of the hatching chamber. The old 'Monarch' incubator, made by James Rankin, the father of the 'green duck' business, was typical of this class of hatcher.

"About this time came a stream of thermostatic heat regulators, the most successful of which was one made by Renwick and used on his 'Thermostatic' incubator, and a similar one used on the old 'Perfect Hatcher,' which was made at Elmira some thirty years ago, in both of which a 'clock-work motor' did the work. From this time on thermostatic heat regulators almost without number were introduced, some worthless, but many showing steady improvement.

"The wafer thermostat, originally made by Herson, of England, has had considerable exploitation, principally because the original was not patented in this country. The barometric changes affect this thermostat too much to make it the ideal regulator. The toggle joint thermostat has

been worked out in many designs during the past thirty years, but while the accuracy of movement was present in nearly all designs, they were too feeble to do positive work. This fault was overcome to a very large extent in the thermostat I put on the Cyphers in 1895, and wholly overcome in the Corrugated Leaf Thermostat now used on my model, and invented and patented by me.

"All this time improvements in devices for supplying moisture remained as primitive as at the time of the 'Hot Water Jug' incubator. The nesting material was wetted; water pans were put in the hatching chamber in various positions and styles;

original incubator in 1895, the need of supplied moisture was, to a large extent, eliminated. I took advantage of the fact that the rate of movement of the air had more influence over the rate of evaporation under the conditions found in the hatching chamber of an incubator than the actual degree of humidity, and so regulated and diffused the incoming air that there has been little need for supplied moisture in incubators of my design. Probably for this reason more than for any other one, or combination of reasons, has the moisture question been neglected, even in arid parts of the country where it is of undoubted advantage.

"Some four years ago some of my Colorado customers, out in that arid country where they dry meat in the sun, and even the human lungs all but refuse to rot, began to ask for some better moisture device than was available. The idea then came to me of an 'automatic regulator,' one that would regulate the degree of humidity in the hatching chamber, the same as the heat was regulated.

"About every known substance that had any hydrostatic qualities was tried out in my experimentation with automatic moisture regulation. I did not want to be precipitate, realizing I was first in the field, and entitled to the strongest kind of a patent if I covered the ground properly. And then I had the long line of heat thermostatic experiments to fall back on to guide me away from the usual mistakes the pioneer inventor makes. These experiments had taught me that the simplest was the best, and many things about heat, ventilation and humidity and mechanical movements that I would not otherwise have known. While I tried out many complicated appliances and recorded many possible combinations, the commonest substance and the simplest design appealed to me the strongest.

"With the Model Moisture Regulator more elusive problems had to be worked out than is usual with mechanical appliances. Briefly, we have these factors in humidity alone:

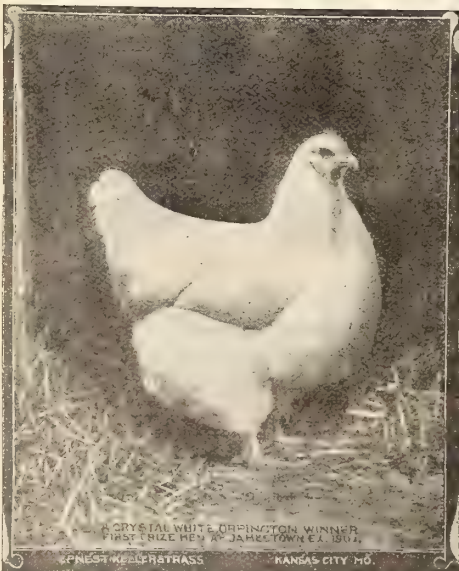

"All space contains some water vapor in suspension. This moisture held in suspension is usually spoken of as 'humidity,' and the percentage of its total carrying capacity is called the 'relative humidity.' The instrument used to record the relative humidity is called a 'hygrometer.'

One of the larger poultry houses. A. G. Clark's Rhode Island Red farm, Willoughby, Ohio

sawdust and sand were put in pans or in the bottom of the hatches and kept wet; the eggs were sprayed with, and sometimes dipped in, warm water, or covered with wet clothes at intervals; but no attempt was made at an automatic supply and regulation of humidity. Occasionally a German hygrometer with an indicating hand made with thin metal and litmus paper was used to indicate the humidity, but discarded after having been found worthless. The standard Mason wet bulb hygrometer was too bulky and expensive for popular use.

"With the advent of the diffusive principle in artificial incubation, which I was the first to use, incorporating it in my

The Famous Hen "Peggy"
Value \$10,000 00

FIRST prize winner at Jamestown Exposition, Madison Square Garden, New York, and everywhere she has been shown. The reason we value the above hen at Ten Thousand Dollars is because we refused \$2,500 00 for her after we sold five of her chicks for \$7,500 00; and we will give \$10,000 00 for a "Crystal White Orpington Hen that will equal her in every way.

SEND FOR OUR CATALOGUE Ernest Kellerstrass, Prop. R. F. D. 1, BOX 98, Kansas City, Mo.

"The presence of moisture in any given space is independent of the pressure or absence of air in the same space, except that the air retards the diffusion of the water vapor particles. We therefore find that the barometric pressure of the air has but slight effect on the readings of the hygrometer.

"The higher the temperature the greater the amount of moisture that can be held in suspension. In other words, the higher the temperature the greater the total amount of moisture it would take to completely saturate a given space. For instance, a space of a cubic foot would hold nearly four times as much moisture at 70 degrees as it would at 32 degrees, and more than twice as much at 100 degrees as at 70, or more than eight times as much as 32 degrees.

"The physical action of humidity is to check evaporation. The greater the humidity and the lower the temperature the slower the evaporation, and vice versa; the higher the temperature and the lower the humidity the more rapid does evaporation take place.

"The only other factor in determining the rate of evaporation is the air movement. In a still atmosphere the air retards the diffusion of the water vapor particles, the same as stones retard the flow of water in a stream. If the air is moving rapidly the vapor particles are carried rapidly away from the evaporating surface, other particles from the moist or wet surface taking their place, and a drying effect is produced. It takes an air movement of fifteen feet per second to produce the maximum drying current.

"There are two scientific methods usually employed in accurately determining the percentage of humidity. One is figured from the dew point, i. e., from the temperature at which the water vapor in the air condenses on a silver test tube, and the other, tables for which have been worked out from the dew point method, is the wet and dry bulb hygrometer. In this instrument the fact that evaporation has a cooling effect has been taken advantage of. One bulb is left exposed to the air and registers the air temperature, the other bulb is covered with a thin fabric and wetted. As evaporation takes place the wet bulb is cooled, and the difference in the reading between the two thermometers caused by the cooling effect of evaporation on the wet bulb, usually spoken of as the depression of the wet bulb, gives us the percentage of humidity, which is, however, modified by the air movement, the actual humidity only being indicated in an air current of at least fifteen feet per second.

"In artificial incubation we have to do with the rate of evaporation, under a temperature of from 102 to 103 degrees, and as the rate of evaporation is influenced by both the humidity and the rate of movement of the air, for practical purposes any instrument used for determining the amount of evaporation must give the humidity or moisture pressure as it affects evaporation under the air conditions in the hatching chamber, rather than the actual amount of moisture contained in the air.

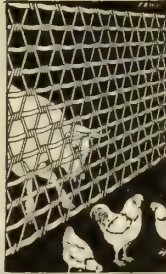

"Such an instrument I have in the Model Hygrometer, and its readings are just as valuable as showing the percentage of humidity, modified by the rate of movement of the air, whether used in the Model Incubator, where the air is comparatively quiet, as under a hen, and the actual humidity is of lesser importance, or whether used in a radiating incubator with strong air currents and supplied moisture is vital. This is for the reason that in the radiating incubator with the strong air currents it would take a higher humidity to offset the greater movement of the air, and under the same degree of evaporation the reading would be the same. I therefore recommend the Model Hygrometer for the use of anyone using incubators of any make. The Model Hygrometer is made in the Model Thermometer Works, which I was forced to establish in order to get the right quality of incubator thermometers. It is adjusted to read at incubating temperatures, and I can guarantee its reliability.

"The Model Hydrostat is also influenced in like manner by the rate of evaporation as well as by the actual humidity, and it is probably as uniform in action as such an instrument will ever be made. It holds the relative humidity within remarkably narrow limits, turning on the water drip automatically and turning it off again at the right time. And this latter is an important feature, as it takes time for the water to evaporate, no matter how perfectly the design of the evaporating surface. It takes 5.38 times as much heat to vaporize water as to heat it from freezing to boiling, and it takes time to vaporize it at incubating temperatures. This 'time' is an important factor to be reckoned with in the makeup

and adjustment of an Automatic Moisture Regulator. The Model Hydrostat, as well as the working parts of the complete Model Automatic Humidor or Moisture Regulator, are designed to meet every requirement of the artificial incubation."

We will only add to what Mr. Cyphers has had to say that it seems fitting that he should be the first to make a successful moisture regulator, after having already done so much for artificial incubation and artificial poultry rearing.

Strongest Fence Made

When you buy our **High Carbon Coiled Spring Fence** you buy strength, service and durability combined. Twenty years of experience—hard knocks, taught us that the best fence is made from heavily galvanized **Coiled Spring Steel Wire**

CLOSELY WOVEN FROM TOP TO BOTTOM

Our Fence is so closely woven that small pigs cannot "wriggle" through it. So strong the vicious bull cannot "faze" it. We have no agents and do not sell to dealers but sell direct to the user

AT WHOLESALE PRICES FREIGHT PREPAID

Coiled Wire provides for expansion and contraction and prevents sagging between posts. Every pound of wire used in the construction of our fence is made in our own mill from the best high carbon steel obtainable. We give

30 DAYS FREE TRIAL that our customer may be sure they are satisfied. We make a full line of FARM AND POULTRY FENCE. Our wholesale prices will save you money. Catalog Free.

HARDING'S "BABY CHICK FOOD"

TRADE MARK

Made of Dried Milk and Clean Grains

THE KIND THAT'S DIFFERENT

HARDING'S 1908 "Baby Chick Food" mixture contains a proper proportion of cracked dried milk, clean grains and seeds. No Grit, Screenings, Dirt nor Charcoal. **All Food.** A CAUTION—"Baby Chick Food" is Harding's trade-mark, properly registered, and all dealers are cautioned not to use the same either on packages or advertising matter, unless under Harding's brand.

100 lb. bags, \$2.50; 50 lb. bags, \$1.50; F. O. B. Point of Shipment.

HARDING'S GRANULATED MILK for poultry gives an increased egg-production of from 30 to 40 percent over Beef Scrap, and can be kept in any climate. Price, \$3.00 per 100 lbs.; \$1.75 for 50-lb. bags—F. O. B. point of shipment.

Call for Harding's Lice Killing Nest Eggs; Egg Shipping Boxes; Roup Cure; Cholera Cure, etc. Send 6c. stamps for book, "How to Make Poultry Pay."

GEO. L. HARDING, Manufacturer,
Box 333, Binghamton, N. Y.

Humphrey's Advice:

Force Your Hens to Lay in Winter

A wild hen lays about 30 eggs in a season—just enough to keep ahead of race suicide.

The hens in your poultry yard can be forced to lay from 120 to 200 eggs a year.

During the winter time, you can average from 12 to 15 eggs from every 20 hens, no matter how large your flocks are.

These results depend upon the food and the way it is prepared.

Fresh cut raw bone is the food that forces hens to lay, and it should be prepared in a Humphrey Open Hopper Bone Cutter.

March chickens are the biggest money makers for the poultryman. Therefore, it is essential to your greatest success that you should get your hens into laying condition now.

Fresh cut raw bone will produce eggs for early setting.

Fertile eggs mean more chickens—more money.

Fresh cut raw bone insures fertile eggs. Low vitality causes chicks to die in the shell.

Fresh cut raw bone means vigorous chicks.

Early broilers and friers bring big prices—large profits.

Fresh cut raw bone is the best developing food in the world.

Early laying pullets are money earners.

Fresh cut raw bone pushes pullets to early maturity.

Every poultry yard of twenty or more hens ought to have a Humphrey Open Hopper Bone Cutter—the easiest to operate and fastest cutting machine on the market. It will last twenty years.

It will more than pay for itself before spring.

It cuts your feed bills in half.

It forces hens to lay now when egg prices are highest.

You can also sell fresh cut raw bone to your neighbors, and start a sure profit-making business.

You can find out more about fresh cut raw bone and why it is best prepared in a Humphrey Bone Cutter by sending for our 48-page book of "Poultry Helps."

Send us your name and tell us how many chickens you have.

Planet Jr.

Bigger crops with less work

No. 10.

Planet Jr. implements are the greatest labor-savers and crop-producers ever used in the garden or on the farm. They do the work of six men, and do it better than by old methods. Invented and manufactured by a practical farmer. Strong and lasting. Fully guaranteed.

New No. 10 Horse-Hoe, Cultivator, Hiller, and Vine Turner is the lightest, strongest Horse-Hoe made. Works great as a turnrow.

Write today for free 1909 catalogue of all Planet Jr. implements.
S. L. Allen & Co.
Box 1107T, Philadelphia, Pa.

No. 38 Single-Wheel Disc-Hoe Cultivator and Flow is a handy tool for quick thorough garden cultivation. Discs are adjustable for depth, and throw to or from the row.

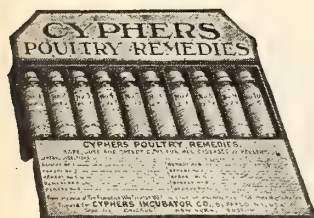

WHAT THE POULTRY BUSINESS IS.

Five interesting chapters on poultry raising will be found in the new free annual book of Cyphers Incubator Company, Buffalo, N. Y. They cover the subjects of "Feeding Chickens," "Laying Records," "Incubating," "Brooding" and "What the Poultry Business Is." Both beginners and experts will get from these chapters valuable information they do not now possess, and one cannot know too much in and about the poultry business.

This great annual book has this year excelled all previous years in the attractive pictures it contains. Superior Standard bred farm fowls are portrayed, as well as numerous prize winners at America's big shows. There are also photographs of the highest priced birds ever sold and letters from their owners. There are about seventy illustrations of the world's biggest and most successful poultry and duck plants and experiment stations, both American and foreign; over fifty photographs of leading fanciers and experts whom you have perhaps read about but never seen, and some nice flocks of fowls raised by women fanciers.

What is good for experts in the poultry business is good for beginners. Therefore when we tell experts that this 1909 catalogue of the Cyphers company not only keeps up its reputation of being the biggest and best (212 pages, fully illustrated), but that it is especially valuable to them as containing full information on the new rules of the fire insurance companies, then beginners will be equally interested, especially those who mean to operate an incu-

Cure Your Fowls of

Cyphers Poultry Remedies Case contains ten remedies, each in a separate bottle. Each bottle is labeled with the name of the disease it is intended to cure, and instructions for its use. You cannot expect one remedy to cure all diseases. Each disease needs a special and different treatment. These remedies are in tablet form and do not lose strength with age if kept in our airtight case. No trouble to use. Little time in giving treatment.

Colds
Canker
Roup
Cholera
Indigestion
Limber Neck
Cramps
Worms
and all
Diseases

Sold Also in Single Bottles

If you do not know what ails your fowls, write us describing symptoms and enclose money for a single bottle of the cure. We will select the remedy your fowls need. Write for our Poultry Remedy Free Catalog. Address nearest office.

CYPHERS INCUBATOR COMPANY, Buffalo, New York City, Boston, Chicago, Kansas City, Oakland

Profitable Farming

Fertile land at reasonable prices, a mild and healthful climate, crops of excellent quality and markets for them, transportation facilities,—are some of the advantages of the new country along the Pacific Coast Extension of the

Chicago
Milwaukee and St. Paul
Railway

There are splendid opportunities along this new line in the Dakotas, Montana, Idaho and Washington for the farmer, fruit grower, stockman, dairyman, poultry raiser, business man and professional man. Descriptive books free.

General Passenger Agent,
Chicago.

212 pages—fully illustrated

bator or brooder. Poultry raisers are greatly pleased with these new insurance rules, as they are intended to afford them the greatest measure of protection in case they have insured or wish to insure their homes or buildings. It is a subject that none can afford to ignore, and this book tells the story in detail—tells it all.

The balance of the book is devoted to describing what Cyphers company makes and sells, and how it is made. It is startling evidence of the growth of the poultry industry. By no means the least interesting is the long list and illustrations of poultry supplies made by this leading poultry supply company on its nine acres of floor space, by its 500 or more employees, at its seven branches.

Chief among the newly invented and patented goods put on the market by Cyphers Company this season (aside from their fire-proofed insurable incubators and brooders) are their line of electric hatchers and brooders and their mammoth incubator. In the electric incubators chicks are hatched wholly by means of electricity—that is something new under the sun. The mammoth machines are simply great big incubators holding as many eggs as one wishes to hatch at one time. Four of them are in successful use at present, holding from 8,000 to 40,000 eggs each. Full descriptions and pictures of these new and wonderful incubators are contained in the Cyphers company catalogue.

Write today for this book. It will not cost you a cent, even for postage. Simply mail your name and address to one of the branches of the company (the one nearest to you), ask for the big book and mention the name of this paper. Address Cyphers Incubator Company, Buffalo, N. Y., Boston, Mass., New York City, Kansas City, Mo., or Oakland, Cal.

"Mandy Lee" INCUBATORS and BROODERS

Just Three Things

WE want every actual or prospective operator of an incubator, every poultryman who is interested in learning how to secure the biggest hatches of strong healthy chicks, to have a copy of our 1909 Catalog and our new booklet "Incubator Hygrometry." They won't cost you a cent, and you'll get dollars worth of new ideas from them—information that is good, whether you use our machines or not,—the result of our more than 20 years' actual experience with poultry.

We want to tell you of our method of regulation and control of the three things necessary to insure a successful hatch—heat, ventilation and moisture—not one, but all of them. (No other manufacturer even claims that his machine regulates anything but heat unless you buy extras.)

We want to show you the difference between guesswork and certainty of results in incubator work.

If you're an old hand at the business you know what this means. If you are a beginner, you will make a big mistake if you buy other incubators and brooders before investigating ours.

We have the only incubator in which favorable hatching conditions can always be made at the eggs regardless of how unfavorable the conditions may be outside of the machine; the only one in which the hatching process is always a certainty.

Ours are the only brooders—that furnish direct contact heat to the backs of the chicks, and with proper method of ventilation.

Send for Catalog today. You need the information it contains regardless of what machines you may use.

READ THIS

"If I was to buy 100 incubators every one of them would be a Mandy Lee. My average per cent of hatches with your machines for the last three years has been better than 90 per cent.

T. R. BLAKE, Hadley, Minn. Nov. 12, '08

are required to make 90 per cent to 100 per cent hatches every time and in any season, climate, or altitude: 1st, correct heat; 2d, correct moisture; 3d, correct ventilation. In other incubators it's mostly guesswork; in the Mandy Lee it's a scientific certainty. In other incubators hatching conditions are right if you guess right; in the Mandy Lee they are right if you follow simple instructions.

Correct Heat means 103 degrees at the upper surface of each and every egg, gradually increasing to 105 degrees during the last week. Measured accurately with a Mandy Lee Thermometer, distributed by our patent perforated-tube system, and easily regulated within a variation of one half degree. Most other incubators vary from 2 to 5 degrees.

Correct Moisture means 65 per cent at commencement of incubation, gradually decreasing to 50 per cent during 3d week. Measured

accurately with a Mandy Lee Hygrometer, the only instrument suited to incubator work, and regulated within a variation of 2 or 3 per cent. Most other incubators vary from 20 to 50 per cent and with no measurement or regulation.

Correct Ventilation

means a gradual change of air in the egg-chamber once every half hour. Automatically regulated by simple adjustment of damper on heater. Some other incubators give a change of air every 5 minutes, causing a rapid draft; others change the air only once in 24 hours, with result that the air becomes foul or stagnant.

See that
HEATER

It takes these three features—no more or no less—and they must be in perfect harmony and capable of separate regulation and control; Heat to develop the germ; Ventilation to purify the air of the egg-chamber; Moisture to assist in rotting the shell, to regulate the rate of evaporation of the egg substance, and to prevent the inner membrane from becoming tough. Some incubators may have one

of these features in partial success, but only in the Mandy Lee are all three of these essentials combined and working in perfect harmony one with the other.

Every Feature

of the MANDY LEE—Heat, Moisture, and Ventilation—are measured and regulated to a stated degree. There is no guesswork at any point.

A "look inside"—showing Hygrometer, Thermometer and perforated tube system of ventilation.

Lee Fireless Brooders

are an absolute success outdoors in any situation warmer than 18 deg. above zero; always preferable to lamp heated brooders for indoor use. Perfect ventilation; no dirty, smoky lamps; no danger from fires. Better and stronger chicks. Send for catalog. Address

WHY POULTRY PAYS AND HOW TO MAKE IT PAY

A book for the beginner in poultry raising and for those engaged in it who are interested in securing from the business the greatest profit obtainable. This book tells you how to start right, how to succeed with poultry, how to line breed, how to win at the shows, how to breed and prepare fowls for market, how to feed for the production of eggs. Also contains a chapter on Poultry Diseases and simple remedies for same. Gives instructions on incubators and brooders and much other valuable information, and is profusely illustrated with ideal drawings of Standard fowls.

We are selling this book at the popular price of **50 cents**. This book and one year's subscription to American Poultry Journal for only **75 cents**. Send all orders to

FEED your hens cut green bone and get more eggs. With a Crown Bone Cutter you can cut up all scrap bones easily and quickly, and without any trouble, and have cut bone fresh every day for your poultry. Send at once for free catalogue, WILSON BROS., Box 600, Easton, Pa.

SHOEMAKER'S BOOK ON POULTRY

AND ALMANAC FOR 1909. There is nothing in the world like it. It contains over 200 large pages, handsomely illustrated. A number of most beautiful Colored Plates of Fowls, true to life. It tells all about all kinds of Thoroughbred Fowls, with life-like illustrations, and prices of same. It tells how to raise poultry successfully and how to treat all diseases common among them. It gives working plans and illustrations of convenient Poultry Houses. It tells all about

Incubators and Brooders. It gives full instructions for operating all kinds of incubators. This chapter is marvelously complete and worth dollars to anyone using an incubator. It gives descriptions and prices of Incubators, Brooders and all kinds of Poultry Supplies. In fact, it is an encyclopedia of chickenhood and will be mailed to anyone on receipt of only 15 cents. Your money returned if not pleased. C. C. SHOEMAKER, Box 805, FREEPORT, ILL.

\$1,000 IN CASH PRIZES

Mention where you read this advertisement and send us 25 cents (silver) and we will mail you "ATZLAN," that bright, breezy, twenty-eight-page monthly magazine for one year. Filled from cover to cover with stories of the Southwest, articles for the home-seeker, and for those who are in search of health, wealth and prosperity.

Oliver A. R. Tobey, the artist, is our "regular illustrator."

We offer \$1,000 in cash prizes to those who will work for us. If you have a good job and don't want to jump it, why, write to us anyway. We'd like to add you to the list of our subscribers and give you a chance to win one of our big prizes; but if we can't coax you to join us, write to us and let's just get acquainted.

JAMES R. SHELTON GLENWOOD, NEW MEXICO.

75c Pays for one year's subscription to American Poultry Journal and five years' subscription to Farm-Journal. Each subscriber will also receive a copy of the Lincoln Farm Almanac for 1909. See ad elsewhere in this issue.

Burhans' Quality Exhibition Barred P. Rocks

The strain that has won the greatest percentage of all male prizes in the United States and Canada, is found in its purity in my yards. Book on the Barred Plymouth Rock and its breeding, free for a stamp. You should have it.

Olentangy Poultry Yards - Chas. C. Reid, Manager - Delaware, Ohio

OWEN FARMS

SHOW BIRDS

This is the time to enquire for the birds you want to win any particular show. Tell us the show and date and we will quote the price and WIN. We will fit them or not, as you wish. Tell us in your letter if you wish us to fit them. We sometimes guarantee to win, and are always willing to make such a proposition.

We are equally strong in

Buff Orpingtons White Ply. Rocks White Wyandottes

New York, Chicago, Cleveland, St. Louis, Pittsburg, Boston, or ANY show in America, has no terrors for us, and we can win for you if we say we can, and we will be frank about it.

The PRICE will be right for the bird necessary. Our Mr. Delano has been one of America's leading poultry judges for ten years, and our Mr. Owen has had a world-wide experience in the show rooms of America and Europe. If you are frank to tell us what you want to accomplish in the SHOW ROOM we are positive we can do our part, namely, select the RIGHT BIRDS at the right price and WIN.

QUALITY we have in abundance in these three varieties, and pictures of them can be sent you if you name your choice.

You will never make a mistake if you send us a certain amount of money and ask us to send you the best bird we can for it, giving us a fair idea of your requirements.

We are human and the man or woman who trusts us will not be a loser by doing so. Again, we protect you by saying in plain English (and you can be assured this good American Poultry Journal will keep us to our advertised promise), that if you receive any bird or birds that on arrival does not satisfy you, you may rest them 48 hours and return to us, and we will pay return charges and return you all your money paid for the bird or birds you return.

We want your trade and we think we deserve it, because we are frank, clear and straightforward in our statements and promises, and we leave the final question of satisfaction in your hands.

BREEDING BIRDS

All poultry fanciers know that good breeding birds are in every flock that would not win in the SHOW ROOM, but when mated up properly in a small pen of three, four or five birds, will produce winners galore. Everybody knows that these birds do not bring as high prices as show birds picked to win.

In a flock of 100 birds, if you get ten winning show birds you are doing well, and you may nevertheless have 40 grand breeding birds, all of equally good blood, good type and color, and yet in some minor point not able to stand the strongest competition of the show ring, and so

down goes the price, and yet when such breeding birds are mated by such an expert as our Mr. Delano, the male bird selected with extreme care, so as to nick in with the JUST PROPER females, the resulting chicks are grand fellows and will WIN.

Now this is what we offer in **BREEDERS**. Small matings selected as described and at the right price. Do not get it into your head that Owen Farms charge more for their birds than others. **They do not.** We intend to always give our customers a little more for their money than others do.

We sent out this spring over \$6,000 worth of eggs for hatching, and if we have a dissatisfied customer we do not know it, and they are likely to tell us if they are not satisfied.

For breeders, therefore, in any of our varieties, ask us to describe what we can send you for a sum you may name, and we will gladly tell you what we can offer, and we will treat you in regard to these birds as we indicated before concerning the show birds.

Remember, we always leave it to you finally, as to whether you are satisfied.

Send for catalogue or information. Reply will be prompt. Mention American Poultry Journal when writing.

CLASSIFIED ADS

UNDER this heading ads will be inserted for six cents per word each month for less than three months, and **four cents per word each insertion for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under **classified headings.** No ads accepted at less than an average of fifty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. **AMERICAN POULTRY JOURNAL** is furnished every classified advertiser for one year, where the advertiser remits \$1.00 or more. When placing your ads remember that advertisers of Classified Ads get better returns from **AMERICAN POULTRY JOURNAL** than from any other poultry journal—none excepted. On writing any of these advertisers mention A. P. J.

ALL COPY FOR CLASSIFIED ADS MUST REACH US BY THE 19th OF THE MONTH PRECEDING DATE OF ISSUE

FOSTER'S EGG MACHINE. The breed that pays is the breed that lays, and that breed is the Single Comb Black Orpingtons. So why waste your time and money with a small breed when there is a large one that excels the smaller ones for both laying and market purposes? Col. Foster has by careful selection produced a strain of chickens that has no equal in the show room or in the yard as breeders or layers. Send your name and address, plainly written, and Mr. Foster will send you free a beautiful chromo, together with the history of this wonderful new breed. D. N. Foster, R. F. D. No. 7, Fort Wayne, Ind. 12-3

"Tyco's" Thermometers

Tell the Truth About the Temperature in the Incubator and Insure Chick Life.

A Lying Thermometer Will Kill Chicks

A thermometer which tells you that a temperature of 106 or 107 degrees in the egg chamber is only 103 degrees, lies to you.

That lie will kill the chick in every egg in the incubator.

The Thermometer in incubation is more nearly parallel to the Thermometer in medical practice than any other use to which a Thermometer is applied.

Ask your doctor what the effect would be in his practice if his Thermometer lied two or three degrees.

A human temperature of 107 degrees is the danger point, and calls for heroic measures.

Suppose his Thermometer indicated 103 or 104 degrees when the actual temperature was 107 degrees. The result would be identical with operating an incubator at 106 or 107 degrees if your Thermometer lied and indicated 103 degrees, - sure death in the case of the chick, and probably with the patient.

Physicians are careful to know that their Thermometers tell the truth. You should be equally careful to know that your Incubator Thermometer tells the truth.

"Tyco's" Incubator Thermometers are made with the same relative care and skill as "Tyco's" Clinical Thermometers.

When a "Tyco's" Thermometer shows 103 degrees you know it is 103 degrees—"Tyco's" Thermometers do not lie.

Let us send our little booklet entitled, "Thermometer Facts Worth Knowing."

It will tell you many things about Thermometers you did not know. The information it contains will enable you to guard against temperature difficulties, and possibly insure a successful hatch.

If you are planning to buy an incubator, tell the manufacturer you want "Tyco's" Thermometer with your machine.

The manufacturer of any good incubator ought to be glad to have you ask for a "Tyco's" because he knows it is a Thermometer that will give you the greatest success with his machine.

Ask for a "Tyco's"—insist upon having it.

Taylor Instrument Companies Rochester, N. Y.

**Every Egg a Chick**

The **Triumph Incubator**, owing to its many patent features, is the leader and will hatch every fertile egg. It has a unique system of hot water heating, which, with the automatic regulator, keeps the temperature at a uniform degree. Is very simple, easy to operate and takes little oil. Supplies its own moisture and is self-ventilating. Has heavy copper tanks and boiler, thick insulated double walls, chick nursery and high egg chamber enabling it to hatch goose, duck, turkey and chicken eggs successfully. Built by incubator experts. Thousands in use. 16 years' experience.

**Triumph Incubators and Brooders**

are sold direct from my factory at Lowest Wholesale Prices without a middleman's profit. Sent out on 60 days' trial and strongest guarantee. Last finely illustrated Poultry Book and Catalogue free. It contains a mine of valuable poultry information and you should have it.

R. F. NEUBERT, Dept. 23, Mankato, Minn.

At NEW YORK SHOWS
Not GLORY, But

HONOR

"World's Champion of 1906,
Our \$2,000 Male."

Winner of First Prize and Sweepstakes Special at New York Show, nearly 500 Barred Plymouth Rocks in line. Through his dam he descended from Sire of the First Prize Chicago Cockerel, 1902, also from a grandson of same male and which sired First Prize Chicago Male, 1906. BOTH the Chicago First Prize Winners were bred by us and hatched by customers from eggs we sold.

For the past two years I have won the female championship on females; all "Lee Belles," different birds each time competing against birds from all the biggest American and Canadian yards. In regard to publishing this letter you can use any or all of it, anywhere, any time, for any purpose you see fit, because I like to give credit where credit is due, and its contents are all facts.

F. A. JAMES, Ottawa, Can.

**World's 19 Year
1st Prize Record
Won by Bradley Bros., Lee, Mass.
BARRED PLY. ROCKS**

AT MADISON SQUARE GARDEN
THE LAST 19 YEARS

BIRDS WE BRED AND RAISED HAVE

WON { 17 2-3 per cent MORE FIRST PRIZES, TOTAL, than any other Exhibitor has won on any stock.
25 per cent MORE FIRST PRIZES ON PENS than any other Exhibitor has won on any stock.

66 2-3 per cent MORE FIRST PRIZES ON MALES than any other Exhibitor has won on males not our breeding

OUR "LEE BELLES"

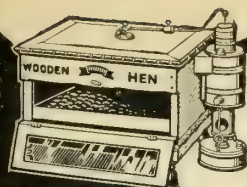

Again Demonstrated Their Superiority by Winning First Prize in Each of the two Largest Shows of '06-'07 Season, also the Championship Prize in what was considered the Strongest Female Competition of the year, and since have made similar records. The past Nineteen years we have Bred and Raised More High Grade Exhibition Barred P. Rocks than any other Breeder, probably, in the World

1000 Breeding and SHOW BIRDS, both old and young, bred from these same lines of New York and Boston First Prize Winners FOR SALE.

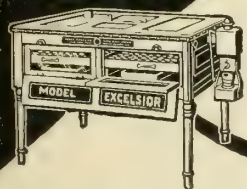

I have in my yards a Bradley Bros.' cock bird that took first prize in the Wisconsin State Poultry Show, 1908. Was offered \$100 for him—a genuine offer, not "wind." Am going to have nothing in my yards but Bradley Bros.' blood. Have tried many others, having purchased two \$50 males and several at \$25.00. Also several high priced females, but none of them please me as well as yours. FRED BADGER, Oshkosh, Wis.

BRADLEY BROS. : Box 909, Lee, Mass.

FREE Illustrated Printed Matter Telling of Winnings at Kansas City, Chicago, New York etc.

Hatch Chickens By Steam

Stahl Incubators were among the first to be put on the market; to-day they stand as they did then—the best—approved by thousands of particular fanciers the world over. This isn't luck—it's merit—perfect incubator value, produced by the right kind of material and workmanship, backed up by an unbroken line of splendid results. The

Excelsior and Wooden Hen INCUBATORS

have a standard hatching record of a chick from every fertile egg; they maintain this splendid showing because all features of their construction—heat, moisture, ventilation, and similar details—are carefully looked after and perfectly worked out. The **Excelsior** or **Wooden Hen** will hatch a brood before your hens stop laying. You can market your early broilers and mature pullets into quick layers at a time when both will yield an extra big profit. Buy a "Stahl" and eliminate trouble and worry. Catalogue illustrates complete line of Incubators, Brooders, Poultry Supplies, etc. Free on request.

"RINGLETS" STAND ALONE, VICTORS OF THE FIELD . . .

At America's Imperial Show, Madison Square Garden, New York, Winter of 1907-1908 . . .

E. B. THOMPSON'S BARRED P. ROCKS

As usual win the leading prizes and achieve the highest honors that can come to any breed. First prize on cockerel, first prize on cock, the Great National Silver Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. Double the number first prizes of any competitor. Special for best shaped male, special for best headed male, special on hen, special on pullet, the Sweepstakes Special in Gold for best Plymouth Rock on exhibition of either sex and any variety. The Imperial prize of the show, special for champion male.

For more than twenty years at New York my "Ringlet" victories have been complete. Exhibited by me personally they have won a grand total of 114 prizes, 60 of these being firsts and specials, being more first and special prizes than won by any competitor in the history of the show. These include the \$100 Champion Challenge Trophy, won three times; the \$100 Association Cup, won three times; the \$100 Sweepstakes Cup offered by the President for best Plymouth Rock cock, cockerel, hen and pullet, any variety.

The "Ringlet" world's record at New York four years in succession is a page of history. The "Ringlet" record of first on exhibition pen three years in succession is the undisputed Champion. My Clean Sweep of FIRST, SECOND, THIRD, FOURTH AND FIFTH PRIZES on pullets has never been approached in Madison Square Garden, and stands alone and unequalled.

One thousand grand breeding cockerels for sale; elegant hens and pullets in any number. Show

HAWKINS'

ROYAL BLUE STRAIN

PLYMOUTH ROCKS

BARRED, WHITE AND BUFF.

WYANDOTTES, COLUMBIAN, WHITE, SILVER, BUFF.

Have won more prizes at New York, Boston, Washington, and America's greatest shows than all others.

My matings this season are the best I ever owned.

At New York, in the strongest show of Barred Rocks ever seen, 451 Birds, I won 1st, 2d, 3d and 4th Cockerels; 1st, 2d and 3d Pullets; 1st and 3d Cocks; 1st and 2d Hens; 1st and 2d Breeding Pens. My other varieties are of the same high quality. Hundreds of choice exhibition and breeding birds at honest prices. EGGS from Prize Matings: one setting, \$5.00; two settings, \$8.00; three settings, \$10.00; five settings, \$15.00. \$20.00 per 100. Catalog of America's finest Plymouth Rocks and Wyandottes free.

Eggs For Hatching

A \$50 BIRD FOR \$5

Mr. G. C. Kerschler of Evans City, Pa., writes: "I will let you know the results I got from the eggs I purchased from you. I only got two chicks but they were worth several sittings of eggs in the show room, as I won first on cockerel scoring 95 points, and he was a late hatched chick, cut in weight. I refused \$50 for him; he is a fine bird. The pullet scored 94½ points." This is only one of the many thousands of testimonials we have supporting our claim of

The World's Best

WHITE WYANDOTTES. We have mated 15 yards this season. Never before have we mated pens of such quality; not a bird that will not support our claim. If you intend placing your order for eggs, remember that it has taken years of careful selection and breeding to produce our WORLD'S BEST STRAIN of

White Wyandottes

and in buying from us you avoid all of the worries, the years of waiting and perhaps a hundred disappointments. The price remains the same, **\$5 per sitting**. Send us a dime today for our catalogue; the finest catalogue ever issued.

Repair Your Own Incubator

Don't throw away your old incubator just because it doesn't work right. Benefit by our 15 years' experience in the incubator repair business. Write for our free catalog, which tells how to find the cause of the trouble and shows you how to remedy it. We manufacture a full line of incubator and brooder supplies, fixtures and repairs—everything needed for making new incubators or repairing old ones. Every article sold by us is under an iron clad guarantee and will be replaced if found defective.

Oakes' Hydro-Safety Lamps

Absolutely safe, constructed especially for incubators & brooders. More heat and less smoke and soot than any other lamp made. Made in all sizes—costs but a trifle. A new lamp part furnished separately if desired.

ers, Mineral Wool, Asbestos Felt, Fireproof Glue, Hygrometers, Chicken Markers, Galvanized Drinking Fountain, Automatic Alarm, etc.—all made right, and can be supplied quickly and cheaply. Write for our FREE Catalog.

OAKES MFG. CO., Box 6, Bloomington, Ind.

BUILD YOUR OWN INCUBATORS AND BROODERS

and Save One-Half the Purchase Price

Anyone can do it with my Plans. I furnish the mechanical parts, Lamps, Regulators, Heaters, etc., at low prices. You simply make the box or case. Many thousands have done it and I have yet to learn of a single failure. For only 25c to cover cost, I will send you prepaid my big illustrated book of plans and catalog, worth dollars to you. These plans are so simple, the instructions so complete, it is impossible for you to go wrong. You save half the purchase price and get the advantage of my exclusive patented features not found on other machines. Most prominent among these are

My Acme Tandem Thermostat and Acme Trip Burner,

with combined damper and flame regulator—will save half the oil, labor and cost of operation.

These wonderful inventions are not to be found on any incubator you buy. I do not sell or build incubators—I only manufacture incubator supplies. I have been an incubator specialist for 20 years—the only one in the world. When you get my book you will see how easy it is for you to build a high-grade, practical Incubator or Brooder, having many exclusive features (all in favor of the inexperienced operator) which are not found on any other make.

My New Acme Tandem Double-Compound Thermostat, the most powerful, accurate, durable and reliable thermostat ever invented, will increase the efficiency of any incubator or brooder—it marks a new era in artificial incubation, in heat regulation—it eliminates all regulation troubles.

TANDEM THERMOSTAT

My Acme Lamp is the safest and surest known—can't upset—no danger of fire.

My Automatic Ventilation System insures a perfect hatch without an experienced operator.

than any other burner. The combustion is perfect. The wick never chars. Absolutely safe, will last a lifetime, and with my Tandem Thermostat and my Acme Regulator (having knife-edge bearings throughout) saves 50% in oil consumption by automatically lowering the flame when heat is not needed and raising the flame when more heat is required. This increases the hatch, saves time and worry, and cuts operating expenses in half.

ACME TRIP BURNER

My New Tubular Tank, with heat retaining and distributing bars, produces a uniform temperature throughout the egg chamber, using one-third less oil than any other system of heating.

If You Have an Incubator or Brooder

It will pay you to send for my plans and catalog, then at a slight expense you can remodel your old machine and make it a profitable and permanent investment.

Write today and let me tell you all about my Lampless Brooder which costs you less than \$4 to build. No lamp—no tank—no expense to operate. You cannot lose. If you are not satisfied after you have looked over the book of plans, send it back and I'll return your money and postage. If you keep the plans and catalog, I'll allow you 25c on your first order. You have all to gain and nothing to lose—send for book today.

H. M. SHEER, 400 Hampshire Street, Quincy, Ill.

On Deck!

His chickship resembles FARM-POULTRY in this respect. If any event of National or local importance to the poultry world takes place, such as the great Madison Sq., Boston or Chicago shows, American Poultry Association Meetings, etc., FARM-POULTRY is always "on deck." Whether it condemns, criticises or approves, it does so frankly and fearlessly, uninfluenced by business considerations. It prints ALL the show awards, not only the winnings of its advertisers. If you approve such an attitude in a poultry publication we shall probably add you to our present 30,000 readers who are for FARM-POULTRY first, last and all the time. FARM-POULTRY is 50 cents per year but note our special offer of

Farm-Poultry (Monthly) one year } Both for
American Poultry Journal (Monthly) one year } 65 cts.
Price to Canada 90 Cents.

For 19 years FARM-POULTRY teachings have embraced everything that the beginner or expert should know about Incubating, Brooding, Rearing, Feeding, Mating, Housing, Exhibiting, Killing, Dressing, Marketing, etc., etc. We publish two of the greatest books of the day on poultry keeping, works that have been accepted as text books by the leading Agricultural Colleges and Experiment Stations. They contain 160 pages each and retail for 50 cents apiece, but for \$1.50 we mail them to you and give in addition the two above mentioned papers one full year. Price to Canada \$1.75. This is one of the best combination offers ever made. But all orders and remittances on above orders MUST be sent to

FARM-POULTRY PUB. CO., Boston, Mass.

CLAIMS AMOUNT TO NOTHING

UNTIL A WIN HAS PROVEN IT OUT AT MADISON SQUARE GARDEN

The greatest show on earth. The absurdness of the claim that there are other shows just as hot as New York, is shown when breeders will show a string at the Garden with hardly a "look in," if noticed at all, and two weeks later win out at the largest Eastern shows. This demonstrates what quality it takes to win at New York. Nor does the exhibiting of one or two specimens each year *prove* the breeder. *Numbers* of high class show birds tell of the product of one's yards, and what is more to the point, the *ability of the breeder*. Now, if I may, I will illustrate this by telling what

DUSTON'S WHITE WYANDOTTES

have done the past three years in the hottest competition, against the *best breeders* of the breed.

Season 1906-7:

1st hen.
2d cock.
4th cock.
2d cockerel.
3d pen.
1st collection.
Silver cup for highest number of points, and many other specials.

Season 1907-8:

1st cock.
4th hen.
5th pen.

2d collection.

Special, best cock, and other specials.

Season 1908-9:

1st cockerel.
4th cockerel.
5th cockerel.
1st pullet.
3d pullet.
2d hen.
2d pen.
5th cock.
1st collection.

\$25.00 special for best cock, hen, cockerel, pullet and pen.
Special, best shaped male.
Special, best colored male.
Nat. W. W. specials.
Best cockerel.
Best pullet.
Am. W. W. specials.
Best cockerel.
Best pullet.
3d best pullet.
2d best hen.
2d best pen.

This makes *two* years out of *three* that I have won 1st collection, a record in White Wyandottes unequaled at New York, I believe.

You want show birds; I have them. You want the highest class breeders; I have them. You want choice all-round breeders; I have them. You want layers; I have them.

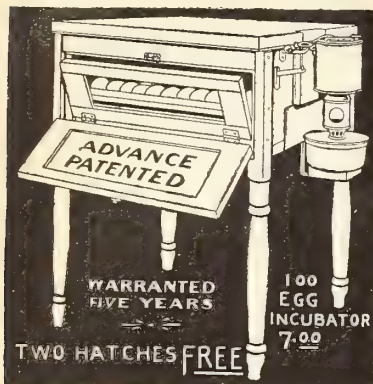

My breeding pens this year will be the best I ever sold eggs from. For pens as they run I get \$5.00 set; 2 sets, \$8.00; 3 sets, \$10.00, and \$20.00 a hundred. Order early to insure prompt shipment.

Send 10 cents for beautiful illustrated catalogue to the Breeder that has made possible the "World's Best Flocks."

METAL MOTHERS

OUR NEW DISCOVERIES MAKE

POULTRY KEEPING EASY AND PROFITS SURE

OUR MACHINES were used exclusively in the original Philo System plant where over \$1500 FROM 60 HENS IN TEN MONTHS has been cleared from the sale of eggs, baby chicks and fowls raised on a city lot 40 feet square. One of the largest hatching plants in America saved over \$700 this year by using our System of brooding. We sell the best brooder ever made for only \$2.50.

One party hatched and raised \$500 worth of poultry last year with four Metal Mothers, and hundreds of others are delighted with our machines and our new way of raising poultry. Our combined machine hatches and broods perfectly at the same time with only one lamp and one-fifth the oil used in other machines. Once filling the lamp completes the hatch. It runs as steady as a clock in any room from cellar to garret, and our Long Burning Safety Lamp runs on for weeks without attention. It is the only machine that airs the eggs in the natural way and applies the heat to the chickens like the mother hen.

THE BROODER-HATCHER

OUR 1909 PATTERN METAL MOTHERS

are the perfected results of the latest discoveries in artificial incubation. They will hatch hens, ducks, turkey and goose eggs equally well and at the same time. Regulation of moisture and heat entirely automatic. One Metal Mother complete \$7.50; two, \$14; four, \$24. One Hatcher complete \$5; two, \$9; four, \$17; six, \$24. Catalogue free.

Cycle Hatcher Co. - 214 Wm. St., Elmira, N. Y.

The Cycle Hatcher Co., Elmira, N. Y.

Dear Sirs:—As per your letter I will send you an order for six machines in a few weeks. Am hatching with the one I now have. Got 47 chicks from 50 eggs. Have abandoned all my 200-egg machines. Am practicing in my store with a view to starting my 40-acre poultry plant near town here. Think I can sell a lot of these machines next year.

H. W. White, 311 Ada St., Yankton, S. D.

The Cycle Hatcher Co., Elmira, N. Y.

Gentlemen:—The hatcher we bought of you last May is all right. We took off two hatches with it; one of 43 chicks and one of 46 chicks. All good ones. Yours respectfully, G. W. Simpson, Austin, Pa.

The Cycle Hatcher Co., Elmira, N. Y.

Sirs:—You people may be interested to know what an experiment with one of your Metal Mothers has done for us. On the 17th of Oct. we put 40 eggs in your machine, 38 of them being fertile, and when hatching time came we were surprised to find 38 chicks from our 38 eggs. This we think an excellent record, for the machine had been placed out in the open weather, the only protection being an old tin covered box. Yours respectfully,

J. P. & L. L. Hollinger, R. 1. Red Farm, Witmer, Pa.

EXTRAORDINARY CLUBBING OFFER

**American Poultry Journal
Western Poultry Journal
Farm-Poultry**

**ALL THREE FOR
75 Cents
Regular Price, \$1.50**

Farm-Poultry, published at Boston, Mass., is one of the oldest and best poultry magazines published in the East, and is now in its 19th volume. This magazine is always full of valuable information pertaining to thoroughbred poultry, and covers the Eastern field in a most thorough manner.

Western Poultry Journal, published at Cedar Rapids, Iowa, is also in its 19th volume, and is one of the most up-to-date poultry magazines published in the West. The two, together with the old reliable American Poultry Journal, now in its 39th volume, thoroughly covers the entire field of poultry literature, and make a poultry library in themselves.

**This is the greatest Combination
Ever Offered by a Poultry Paper**

and especially so when you take into consideration the fact that American Poultry Journal will, during the coming season, publish five more of those handsome colored plates of poultry, any one of which is worth the price of a year's subscription to any one interested in thoroughbred fowls.

This offer is for both new and renewal subscriptions. Cut out the coupon and send in your order today. Address all orders to

MATING LIST FOR 1909

Address, Owen Farms

Vineyard Haven, Mass

1883—BRED IN THE BERKSHIRES—1909

Twenty-five years' experience breeding. Barred Rocks and Silver Laced Wyandottes. Winners in the leading shows of the East. Farm raised, free range. A few choice cockerels and pullets, both cockerel and pullet bred, for sale. Reasonable prices. Eggs, one setting \$5.00, two settings \$8.00, three settings \$10.00.

WESLEY B. BARTON, Box 400, DALTON, MASS.

A TRIUMPH OF TRIUMPHS

At Canada's Premier Show, Guelph, Ont., December, 1908, MARTIN'S REGAL WHITE WYANDOTTES, in a class of 37 cocks, 60 hens, 55 cockerels and 66 pullets, under Tucker, judge, won as follows: Cocks—first, second, third and ninth; hens—first, second, ninth and tenth; cockerels—first, second and sixth; pullets—first, second, third and ninth. Two \$50 Challenge Cups and all specials, including medal for best display of any variety in show. Such a winning at Canada's Quality Show, added to dozens of previous winnings in Canada and the U. S., places the Regal Strain far ahead of their competitors.

SPECIAL—150 pedigreed Regal cockerels, \$5, \$10, \$15, \$20, \$25. My breeding pens for 1909 are already mated and quality better than ever. It will be to your interest to have your egg order in early. FREE—Send for catalogue and mating list telling all about the Regal Strain.

John S. Martin, Box 51, Port Dover, Ont.

White and Buff Wyandottes

EGG-LAYING AND PRIZE-WINNING STRAINS

At the Vermont State Fair this season we won four first, three second and two third prizes. The poultry exhibit at this fair was said to be the largest ever seen in New England—over four thousand birds competing. This number does not include pigeons. The competition in the Wyandotte classes was very strong. It was worth while to win there. At the different county fairs we did, of course, even better.

While we breed for quality our birds must first make good as layers before they are admitted to our breeding pens. We use trap nests and keep a complete set of records. Every bird is raised on free range and has every opportunity to make the strong, healthful growth that the Green Mountain country favors in all kinds of live stock.

Eggs for Hatching—White Wyandottes: Utility Stock, \$1.50 for 15 and \$6.00 per 100. From best pens, \$3.00 for 15 and \$10.00 per 100. Buff Wyandottes, \$3.00 for 15 and \$10.00 per 100. Send for circular.

OTTERBURN POULTRY FARM, W. R. Frazier, Manager, Lock Box B11, Pittsford, Rutland County, Vermont

LAMON'S NORTHERN RAISED

WHITE PLYMOUTH ROCKS are undoubtedly the hardiest fowls in existence today. With the thermometer down to 40 degrees below zero Lamon's White Rocks shell out the eggs. Don't you want some of these great, large, snow white, broad back, full breasted, yellow skinned

WHITE PLYMOUTH ROCKS

Roup is unknown in my flocks. Nine Lamon White Rock pullets averaged 211 eggs last year. The foundation male of my heavy laying strain is the sire of 3 blue ribbon winners at New York and Boston, besides several 2d, 3d and 4th prizes. They are

"THE HARDY KIND"

OUR NEW POULTRY BOOK

ORIGIN AND HISTORY OF ALL BREEDS OF POULTRY

This Book Gives a Complete History and the Origin of all the Recognized Varieties of Chickens, Ducks, Geese and Turkeys, and is

Illustrated With 198 Colored Pictures of Fowls Painted From Life

SOMETHING NEVER BEFORE ATTEMPTED BY ANY PUBLISHER

This is without question the greatest book ever published on poultry, and has been in course of preparation for the past three years. The artists' work alone on this book took almost one year's time to complete, but it shows the fowls in their natural colors and correct shapes, and these colored pictures, together with the history of each variety, gives the fancier all the information necessary to produce fowls for either exhibition or breeding.

This book also tells how to mate the different varieties for best results. It is a book that the fanciers of this country have been in need of for years; a book that is just as suitable for the needs of the experienced fancier as for the amateur.

INTRODUCTORY PRICE, \$1.00

GET THE LABELS

WORDS OF CAUTION: TO ALL WHO INTEND TO INVEST THIS SEASON IN

Incubators or Brooders, we wish to say, do not become confused, DO NOT BE MISLED by the bare claim that an Incubator is "fire-proof." That is not enough! All incubators, of every style and kind, are claimed to be "fire-proof," but the deciding fact with insurance companies, with State Inspection Bureaus and with local rating boards is, "Are they, or are they not, built in conformity with the "Rules and Requirements" of the National Board of Fire Underwriters, and have they, or have they not, been examined, tested and labeled by the Fire Insurance Engineers, under the direction of the National Board of Fire Underwriters?"

In short, do they, or do they not, bear the Inspection Labels of the Underwriters Laboratories?

REMEMBER That you should INSIST ON GETTING THE LABELS!

If you have any doubt of this fact, read the following letters, all of recent date, from insurance officers and managers of State Inspection Bureaus, which clearly set forth the position occupied by fire insurance rating organizations toward devices that bear the labels of the Underwriters Laboratories.

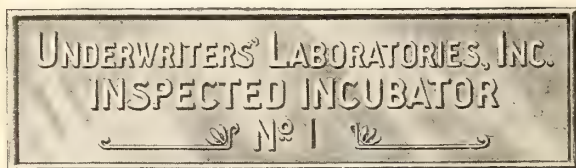

OHIO INSPECTION BUREAU.

Columbus, Ohio, January 4, 1909.

Cyphers Incubator Company:—

Relative to Incubators and Brooders constructed in accordance with the requirements of the National Board of Fire Underwriters AND BEARING THE LABEL of the Underwriters Laboratories, beg to advise that throughout our territory no charge will be made for installation of APPROVED AND LABELED Incubators and Brooders.

T. R. SELLERS, Manager.

Form of Brass Label to be found (in Serial Numbers) on every 1909 Standard Cyphers Incubator, all Sizes

KANSAS FIRE INSURANCE INSPECTION OFFICE.

Topeka, Kas., January 4, 1909.

Cyphers Incubator Company:—

Devices of this character BEARING THE UNDERWRITERS LABORATORY LABELS and installed per Code requirements are passed without charge, under schedule in our inspection reports, THROUGHOUT THE KANSAS FIELD.

CHAS. E. ELDRIDGE, Manager.

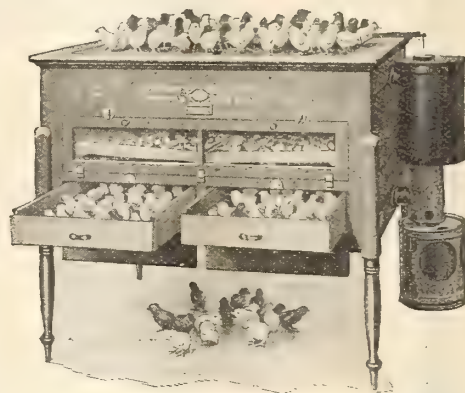

ILLINOIS INSPECTION BUREAU.

Chicago, Ill., January 8, 1909.

Cyphers Incubator Company:—

This Bureau is making no charge for Incubators BEARING THE UNDERWRITERS LABORATORIES LABELS, and it is altogether unlikely that our schedules will be so amended as to call for a charge thereon.

C. F. PERSCH, Manager.

General View of Standard Cyphers Incubator, 1909-Pattern, Equipped with Fire-Proof Heater, Fire-Proof Lamp and Fire-Proof Lamp Enclosure

TEXAS FIRE PREVENTION ASSOCIATION.

Dallas, Texas., December 23, 1908.

Cyphers Incubator Company:—

The Executive Committee of this association has adopted the findings of the Underwriters Laboratories (Inc.), and therefore the Incubators and Brooders THAT ARE SUPPLIED WITH THE LABORATORIES LABELS have our decided preference in the territory over which we have jurisdiction.

C. B. ROULET, Secretary.

MICHIGAN INSPECTION BUREAU.

Detroit, Mich., January 8, 1909.

Cyphers Incubator Company:—

In reference to the use of your Incubators, which are approved by the Underwriters Laboratories AND BEAR THEIR LABEL, we will approve their use without charge for the present, leaving ourselves free to revoke this decision at any time if it is necessary, which we hope will not be the case.

E. F. CHAPMAN, Manager.

MISSISSIPPI INSPECTION AND ADVISORY RATING CO.

(Chartered Under the Laws of Mississippi.)

Vicksburg, Miss., January 4, 1909.

Cyphers Incubator Company:—

We at all times give preference to devices CONTAINING THE UNDERWRITERS LABELS and such devices are accepted by us without additional charge, while NON-APPROVED DEVICES are penalized according to their hazard within the jurisdiction of this company.

DAVID B. TAYLOR, Secretary.

KENTUCKY INSPECTION BUREAU.

Louisville, Ky., January 8, 1909.

Cyphers Incubator Company:—

With reference to Incubators and Brooders manufactured by you which conform to the requirements of the Underwriters Laboratories and BEAR THEIR APPROVAL LABELS, this office will recognize such devices as reducing the hazard on this class of risk to the minimum and will recommend only such Incubators and Brooders as BEAR THE UNDERWRITERS LABELS.

CHAS. E. SPRINGER, Manager.

CYPHERS INCUBATOR CO. FACTORY AND HOME OFFICES BUFFALO, N. Y.

BRANCH HOUSES: 23 Barclay St., New York City; 72 Lake St., Chicago; 26 Union St., Boston; 2325 Broadway, Kansas City, Mo.; 1569 Broadway, Oakland, Cal.; 117 Finsbury Pavement, London, England.

INSURABLE INCUBATORS

MAKE NO MISTAKE

WEST VIRGINIA INSPECTION BUREAU.

Wheeling, W. Va., January 2, 1909.

Cyphers Incubator Company:—

Relative to Incubators and Brooders that are constructed in conformity with the rules and requirements of the National Board of Fire Underwriters **AND THAT BEAR THE LABELS OF THE UNDERWRITERS LABORATORIES** beg to advise that throughout our territory we shall recommend for use only such devices as are so manufactured **AND SO LABELED**.

J. E. BROWN, State Inspector.

INDIANA INSPECTION BUREAU.

Indianapolis, Ind., January 2, 1909.

Cyphers Incubator Company:—

It is the policy of this Bureau in the territory over which we have jurisdiction to strongly urge that preference be given to such devices and appliances **AS BEAR THE LABEL OF APPROVAL OF THE UNDERWRITERS LABORATORIES (INC.)**, and the same stand will be taken with respect to the Incubators manufactured by you.

E. M. SELLERS, Manager.

COLORADO, WYOMING AND NEW MEXICO.

Denver, Colo., January 12, 1909.

Cyphers Incubator Company:—

We have your favor asking us whether or not we intend to make an extra charge where **APPROVED AND LABELED INCUBATORS OR BROODERS** are used by policy holders in the territory over which we have jurisdiction. No extra charge will be made at the present for those incubators **THAT BEAR THE UNDERWRITERS LABORATORIES (INC.) LABELS**.

The Rocky Mountain Fire Underwriters Ass'n.

D. W. CANFIELD, Assistant Manager.

OKLAHOMA INSPECTION BUREAU.

Oklahoma City, Okla., January 5, 1909.

Cyphers Incubator Company:—

I make a practice of recommending **ONLY SUCH** safety devices for the prevention of fire **AS MAY BEAR THE UNDERWRITERS LABORATORIES LABELS**. In all cases where your Incubators and Brooders are used, and which bear this label, I will recommend that no charge be made for their use.

C. T. INGALLS, Manager.

MISSOURI INSPECTION BUREAU.

Kansas City, Mo., January 4, 1909.

Cyphers Incubator Company:—

We are pleased to advise you that we invariably give preference to all devices **THAT BEAR THE UNDERWRITERS LABELS**; also that up to the present time we have had no advice that any other incubators or brooders except yours are constructed under the National Board of Fire Underwriters Rules and Requirements.

F. J. FETTER, Manager.

MINNESOTA AND NORTH AND SOUTH DAKOTA.

Minneapolis, Minn., January 9, 1909.

Cyphers Incubator Company:—

We have jurisdiction throughout Minnesota and North and South Dakota, and it is our practice always **TO RECOMMEND AND AIM TO SECURE LABELED DEVICES** and we shall look with suspicion on any Incubator **THAT DOES NOT BEAR THE LABEL OF THE UNDERWRITERS LABORATORIES**. As near as I can tell from your circular we would not feel as though any charge should be made where these **APPROVED INCUBATORS** are used in buildings.

WALTER I. FISHER, General Inspection Company.

LOUISIANA FIRE PREVENTION BUREAU.

New Orleans, La., December 15, 1908.

Cyphers Incubator Company:—

You will note from the enclosed list of **LABELED DEVICES** that your Incubators and Brooders are listed as **ACCEPTABLE AND APPROVED** in the territory under our jurisdiction.

SOL. BLOODWORTH, Secretary.

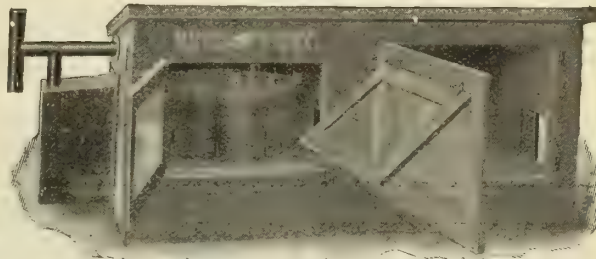

VIRGINIA, NORTH CAROLINA, SOUTH CAROLINA, GEORGIA, FLORIDA AND ALABAMA.

Atlanta, Ga., January 6, 1909.

Cyphers Incubator Company:—

Regarding your incubators, would advise that in view of the fact that these devices **HAVE BEEN FOUND SATISFACTORY TO THE UNDERWRITERS LABORATORIES** they will be given preference in this territory over devices of the same character **WHICH HAVE NOT BEEN SO TESTED AND ACCEPTED BY THE LABORATORIES**.

A. M. SCHOEN, Chief Engineer,
South-Eastern Underwriters' Ass'n.

CYPHERS STYLE B 1909 BROODER

(Formerly known as Style A)

FIRE-PROOFED, INSURABLE, SELF-VENTILATING, SELF-REGULATING

Action in Other States:

Large bodies are said to move slowly, but the State Inspection Bureaus and other rating organizations have acted promptly in this matter of recognizing the Labels of the Underwriters Laboratories, as affixed to Incubators and Brooders that are built in conformity with the Rules and Requirements; still it will be February 1st before all these organizations, from the Atlantic to the Pacific, can take official action and promulgate their decisions. By that date readers of this advertisement will be able to obtain reliable information from our Home Offices, or nearest Branch House, regarding the states and territories not covered by the letters herewith.

Requirements of the National Board of Fire Underwriters; still it will be February 1st before all these organizations, from the Atlantic to the Pacific, can take official action and promulgate their decisions. INSURABLE BROODERS

\$10 for this 240 Egg Incubator

The Reliance 240 Egg Incubator is made of the best material that it is possible to buy. The outside walls are one-inch lumber (not paper). Next comes a layer of asbestos, then a dead-air space of one inch, then a half-inch lining of lumber (not paper). There are two thicknesses of lumber at the top, two more at the bottom and a layer of asbestos between each. The hot water heating system includes a tank made of the best 12-ounce pure Lake Superior copper. The lamp bowl is of first quality galvanized iron with metal chimney, and has a mica-covered opening so the flame can be seen.

The Reliance hot water heating system is absolutely SAFE. Has always been made that way. We have sold over 200,000 incubators and have never heard of a single one exploding, burning up or doing any damage whatever. It is self-regulating, self-ventilating, and requires very little oil.

Ten Dollars for the Reliance Incubator includes everything. There are no extras to buy. You get the incubator complete ready for your eggs. Fancy prices *cut out* on everything. Full quality *put in* on everything. \$10 is all it costs you (240 egg size, remember), and we sell it under a guaranty of your satisfaction or your money back. 120 Egg Incubator, \$8.00; 100 Chick Outdoor Brooder, \$5.50; 100 Chick Indoor Brooder, \$4.50.

Send for Free Book

telling all about the Reliance Incubator—how well it is made—how nicely it is finished—why our prices are low, and why it will give you better satisfaction than any other incubator ever offered at any price. Don't pay for something you don't get. Don't pay more for any incubator than you can get the Reliance for. Don't buy any incubator until you have read the free Reliance book on Incubators, Brooders and Poultry. Write for it to-day. It is illustrated and gives money-making hints and suggestions that are valuable to every poultry man. Your name on a postal card will bring it.

We Want the Name and Address of Everyone Interested in Chickens!

Our Great New Incubator Book is Now Ready for the Mails. Send Us Your Name and Address for a FREE BOOK and SPECIAL OFFER Without Delay.

Write for the new Incubator and Brooder Book and get the benefit of the latest money-making information. Learn all about incubators and brooders, before you invest a cent. Keep in touch with what is going on in the poultry world—all the new ideas and discoveries. The new book is the most complete and reliable treatise on incubators ever issued. Tells about all kinds. Exposes the "shams" and "fakes" that are offered at ridiculous "bargain" prices. Tells about the incubators that really hatch. Practically turns every machine inside out. Explains the scientifically correct principle of the Sure Hatch Incubator and shows just how it is constructed.

Keep Your Hens Busy Laying Eggs and Let the SURE HATCH Do the Hatching

Reader, do you realize what wonderful progress is being made in poultry raising? Do you know that the sixteen billion eggs produced in the United States in a single year are worth the vast sum of \$145,000,000—more than all the mines in the country yield in the same period? The Sure Hatch helps the work along by taking care of the hatching. Leaves hens free to devote themselves to the business of egg production. Get the Sure Hatch and give your hens a chance to break their own records as layers.

Wonderful Work of the Sure Hatch

The Sure Hatch is the hatching wonder of the poultry world. Works so nicely that even a beginner can get wonderful results right from the start. Holds the world's record for largest number of high percentage hatches. Has started more people on the road to success in poultry raising than any other incubator in existence. Endorsed and used by professional poultrymen throughout the world. All it needs is good eggs and a little attention—just a few minutes daily. Uses less oil than others. Never goes on a "strike." Always ready for business and always a money-maker. Tens of thousands testify to its supremacy. Get one at our low prices and make some easy money in the chicken business. We allow 60 days' trial and guarantee for 5 years.

Enormous Production of Sure Hatch Incubators Explains Our Low Prices

GET THE FREE BOOK AND SPECIAL OFFER

Write us now, while it's on your mind. Read the book—get the special offer—the 60 days' trial plan—all free.

Sure Hatch Incubator Co., Box

Made in World's Largest Incubator Factory

The Sure Hatch represents an investment of \$100,000 in the plant, machinery and organization. Ours is the largest incubator and brooder factory in the world. Annual capacity over 100,000 machines. Our immense facilities and enormous output enable us to sell at lower prices than any other first-class incubator. The Sure Hatch is positively a better machine than many that sell for double its price. Built of beautiful California Redwood, the most perfect material known for incubators. Equipped with special patented features that absolutely insure better work than ordinary incubators. This year we have added an Overflow Pipe and Cup, which prevents the possibility of water getting in lamp or dripping on the floor. Catalog tells all about its many great advantages.

OUR GREAT GUARANTEE

is backed by \$100,000 capital and good for 5 full years. The strongest guarantee ever put behind an incubator.

Where can you find a **BIGGER BARGAIN**

**For Sending six subscriptions to American
Poultry Journal, the oldest, largest and
best poultry journal in the world**

You Get \$1.60

In value

We Get \$1.50

In value

This is how it is done

Get 6 subscriptions, at the cut rate price of 35c and we will not only allow you 60c commission, but will also send you, free, a copy of our new book, "Origin and History of all Breeds of Poultry." Regular price \$1.00. This is the **greatest book on poultry ever published**, and no poultryman or beginner should be without it. It contains 200 colored illustrations of fowls painted from life, by one of the best poultry artists in America. By these colored illustrations the beginner is able to know the exact color, markings, shape and comparative size of every recognized variety of chickens, ducks, geese and turkeys, (something no other poultry book contains, not even the Standard. It also gives a complete history and origin of all varieties, together with a complete description of each variety. Also tells how to mate the different varieties for best results. This book is better for the beginner than even the Standard.

The giving of this book for six subscriptions is for a short time only, to introduce our book, as you can readily see we cannot afford to continue this indefinitely. As soon as introduced this book cannot be obtained for less than \$1.00 cash. Therefore start right now and get six subscriptions at 35c each; keep 60c as your commission; send us \$1.50 and we will send you the book on receipt of same. This offer is for the first six subscriptions only.

But this is not all

winning any of the big prizes.

Below is the Tenth Annual Subscription offer of American Poultry Journal and besides getting \$1.60 in value for these six subscriptions we will also count these toward

THE MEN BEHIND THE BIRDS

EVERYONE who reads this Poultry Journal, if he is going to buy Show Birds, Breeding Birds or Eggs for hatching, wants to know some things before placing his orders. Think what you do, send your \$10.00, \$50.00, \$100.00, and in some cases more, to somebody at a distance for eggs or stock and you want your money's worth. You know what you want and that you are quite willing to pay for it. Now, what decides you in your choice of where you will buy? Is it because Owen Farms has 10, 20 or 100 remarkable poultry houses, or a large farm conducted in an up-to-date manner, or even because they have been grand winners and have demonstrated that they have splendid birds, perfect in type and color and with style and condition that makes them win? "No," I say and "**No,**" I say again. If you favor Owen Farms with your order you do so because you **TRUST THE MEN BEHIND THE BIRDS**. You are entitled to know that Mr. Barry Owen is the vice-president of the Martha's Vineyard National Bank at Vineyard Haven, Mass., that he is a retired

merchant, has made a great success in the Gramophone business in England and Europe (known in this country as the "Victor Talking Machine"); that he is enthusiastic about his poultry business and loves it and carries into it the same desire to give the public **good value for their money** that he has all through his business career; that when the public get Owen Farms' 1909 Mating List they can count on getting the exact eggs they buy and that if they order breeding birds in **Buff and Black Orpingtons, W. Rocks, Buff Rocks and W. Wyandottes**, they will get all they expect in blood lines and breeding qualities, and all they pay for.

The public are entitled to know that Maurice F. Delano, our manager, has been honored by his fellow fanciers times without number as officer, president, secretary-treasurer of the Wyandotte

Clubs, the White Plymouth Rock Club and other specialty clubs; that he has been a leading judge in these varieties for years and his name is a symbol for "the square deal."

THE MEN BEHIND THE BIRDS is the reason we put forward to you most forcefully why you should ask Owen Farms what they can and will do for you as to stock or eggs.

At the New York show Owen Farms was decidedly the **sensation in White Rocks**. We won more points than any exhibitor. In **White Wyandottes** our first pen, with 25 pens exhibiting, a hot class, won easily on type, color and condition and our 1st hen, 2d and 3d cockerels and 2d pullet, almost won the collection. In **Buff Orpingtons** Owen Farms and its customers won far more points than any other competitor and the first collection. Think of it, in **three great classes** in the hottest competition to make such a record! To have made it in one variety would have been honor. But **three** varieties. Well, we felt pretty good about it.

We have Grand Breeding Birds and our Eggs for Hatching to offer you. Send for 1909 Mating List. Always address

Owen Farms, Box A, Vineyard Haven, Mass.

Mr. and Mrs. J. D. Koons Northampton, Pennsylvania

Winter Eggs--How to Get Them

What is the reason that good feed and care will make cows give milk in winter, and yet why is it that good feed and care will not make chickens lay eggs? We know why and will be glad to tell you. We have a method of making chickens lay eggs in winter. If the old fowls are healthy and the pullets are old enough to lay eggs, we can do the trick within two weeks' time.

Our method is simple and cheap to use. There is no special equipment and expensive poultry house connected with it. A full explanation by us tells you why eggs are high in winter and low in warmer weather—tells you why setting hens are worth from \$1 to \$1.50 each early in March and April and are worth but twenty-five cents each late in June and July.

Let us explain to you how eating BODY LICE make fowls and chicks have colds, cholera, diarrhoea and roup. Our method of handling the poultry business produces instant results from the start. Is that not what you want? We can and will help you. Drop us a postal today.

SCHILD POULTRY SUPPLY CO.

::

CLEVELAND, OHIO

Five Trips To Florida Free!

And you can take one! Yes, you can really go to sunny Florida and have every cent of your expenses paid. Or if you prefer, you can have a superb \$350 Harrington piano instead of the trip.

The five people who send us the most subscriptions in this contest between now and February 15, 1909, will be the lucky winners. No one has a better chance than you.

Just think of leaving the ice and snow behind and boarding "The Florida Limited" solid-vestibule Pullman train for Florida the first of next March. When you reach Florida flowers will be in bloom and you can pick all the oranges you want.

Among the splendid hotels our jolly party will stop at are the world-famous Ponce de Leon and the superb Cordova at St. Augustine.

A Prize for Every One

In addition to the five wonderful trips and the fine \$350 pianos, we offer one hundred magnificent Grand Prizes and many hundred other prizes for those who do not win a trip or a piano. We guarantee that absolutely every contestant will get a valuable prize and we pay you a liberal cash commission for every subscription besides.

Don't wait. Write to-day for further particulars and a fine set of Florida pictures—all free!

FREE BOOK

KELLOGG'S STRAWBERRIES AND HOW TO GROW THEM

FREE BOOK

Your Name and Address That's All

OUR 1909 EDITION is the most practical text book on Strawberry growing ever written. It's worth its weight in gold because it teaches the Kellogg method of growing the world's record crops of big red berries. Every detail of the work is illustrated by photo-engravings. You read it by pictures. They show you just how to do everything from beginning to end. Strawberry growers who follow the Kellogg way are getting more fancy berries from one acre than the other fellow gets from two. The book makes you acquainted with some of these top-notch growers; shows pictures of their strawberry fields and gives their yields. This Book for your address. We'll trade even.

The Incubator YOU Want is the One that Hatches the Most "Livable" Chicks

It makes no particular difference to you on what principles a machine hatches—**BUT**

It does make a big difference *to you* how many "livable" chicks you get from each hatch.

Those who have had experience with incubators know too well that the common trouble and serious disadvantage of all incubators is the great number of chicks that die in the shell and soon after being hatched.

What you and every other buyer of an incubator wants is a machine that hatches *chicks that live*.

When we tell you *we have that incubator the one you want*—one that, without any "fuss" or bother, *hatches chicks that live* and the most of them. We don't base our claim on *theory* or guesswork, but instead, on actual, practical results *already* obtained by those who are operating

Read
The
Proof Below

12,000 Big Strong Chicks

Were hatched by me in Prairie State Incubators during April, May and June, this year. The hatches averaged better than 90 per cent. and went as high as 98 per cent. These chicks were shipped as far as 2,000 miles with only seven reported dead in the whole 12,000. How is that for vigor?

LEON L. HOUGH.

Canisteo, N. Y.

Prairie State Incubators

For instance, read Mr. Leon L. Hough's letter. Think of it! When but 7 newly hatched chicks died out of 12,000—and most of them were shipped 2,000 miles—it goes without saying that they are **strong, vigorously hatched chicks—chicks that live** because hatched right.

Now read the other letters.

Don't you think they prove conclusively that the Prairie State is the incubator you want?

They certainly **prove** it is the machine that hatches **chicks that live** and the most of them.

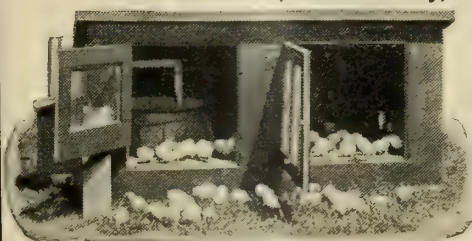

Then why take chances on others?

Prairie State Brooders

and Colony Houses have been made along the same practical lines as the Prairie State Incubator. They have been improved each year and are now without doubt the most satisfactory brooders on the market. The reason for this is that they furnish the little chicks varying temperatures best suited to the individual. Those that want more heat can get it—those that want less can find it and plenty of room for exercise.

Our new catalogue is just off the press, and you will find it one of the most practical and helpful books on artificial incubation. It also fully describes the principles on which Prairie State machines are made clearly and concisely. When you have read how we overcome the heavy loss both from "dead-in-the-shell" and "white diarrhoea" we believe you will not be satisfied to buy any other machine. Write for copy today.

Prairie State Incubator Co.,
468 Main St., Homer City, Pa.

MORE LIVING ACTUAL PROOF

Wells Beach, Me., June 16, 1908.
Prairie State Incubator Co.,
Homer City, Pa.

Gentlemen:—The two Prairie State Incubators bought from you last winter I used side by side with two other standard makes. The results were without exception in favor of the Prairie State. But what impressed me most, was not so much the larger percentage of chicks always hatched in your incubators, as the much greater weight, size and vigor of the chicks. Had I not known the facts it would have been difficult to convince me that the chicks hatched in the different machines were not from different stock. Those hatched in your incubator being plump and heavy as if they had been well fed, while those from the other incubators were light and, in comparison, seemed dried up. The cause of this I could never find to your solution of the moisture question, as it was even more noticeable as the season advanced, evidently when there was less moisture in the outside air. I want to congratulate you on the splendid incubator you have turned out. Very truly yours,
L. J. MALONE.

Pine Bluff, Ark., Sept. 14, 1908.
Blanke & Hawk Supply Co.,
St. Louis, Mo.

Gentlemen:—The Prairie State Incubator that I purchased of you in the spring does fine work. I have never had any experience with one before, yet I took off 3 hatches all over 80 percent of the fertile eggs. It not only hatches big percent, but it hatches big, strong, lively chicks the kind that live and grow right from the start. I will need another before long. Respectfully yours,
(Signed) A. P. RYLAND.
"The Chicken Man."

Edgewood Poultry Farm,
Packerville, Conn., June 15, '08.
Prairie State Incubator Co., Homer City, Pa.
Gentlemen:—Last winter I purchased one of your 400-egg Incubators and have run it alongside of two other makes. With the same care and eggs from same pens I find that it not only hatches more chicks but they are larger and **much more vigorous**. I have about 3000 small chicks on hand now and I think that I can go through the lot and pick out every Prairie State hatched chick. I will give you the results of my last hatch. Placed in the machine 355 eggs, tested out 55, hatched 279 strong, healthy chicks. At eight days old, everyone is living. That is certainly good enough proof that your machines hatch chicks that live and lots of them. Yours truly,
W. J. TILLEY, Mgr.

Oakham, Mass., June 23, 1908.
Prairie State Incubator Co.,
Homer City, Pa.

Dear Sirs:—I like the Prairie State machine I bought very much. Of the 3 hatches I averaged 85 percent or better, and **no cripples or weak chicks**. The chicks were larger and stronger than those hatched in another machine without sand trays. Lost none by sickness. Sold about 300 in all this spring, and as far as I have heard the parties are well pleased with their chicks. I find I can run the machine on 1/2 the oil it takes to run any other hot air machine. I never had such big strong, hardy chicks as I got this year from the Prairie State. I am perfectly satisfied with the work it does. Yours truly,
MRS. M. W. EDSON.

Le Roy, N. Y., Aug. 13, 1908.
Prairie State Incubator Co.,
Homer City, Pa.

Gentlemen:—Two years ago I purchased one of your 150-egg incubators, also a Universal Hover. In the two years' experience I find no other make of machine to compare with it for hatching good strong chicks. I appreciate this fact all the more because I can bring the chicks through the fatal period without loss, whereas my neighbors (who have other makes of incubators) cannot do so without entailing a great loss. I installed your Hover in a piano box, which makes a very satisfactory Brooder. Your Incubators and Brooders are the real thing, and anybody contemplating to buy will not make a mistake if they purchase a Prairie State incubator and brooder from you. Yours truly,
WM. E. DESPARD.

Orchard Hill Farm,
Brookfield, Wis., July 18, 1908.
Hunkle Seed Store,
327 Chestnut St., Milwaukee, Wis.

Dear Sirs:—The Prairie State Sand Tray incubator I purchased of you are the finest hatching incubators I ever run. I found the chicks hatched in them lived better, were stronger, more vigorous and full feathered than those I hatched in the —. The Sand Tray solves the moisture problem. I got larger hatches and less dead chicks in the shell. I have traded off my other incubators and installed the Prairie State. By using them I get more and better chicks. With best wishes I remain,
Very truly yours,
A. E. WILLIAMS.

THORNILEY'S MOTTLED ANCONAS

Bred for heavy winter egg production and standard requirements. I breed the one kind. My birds are constant layers and are money makers. I exhibited nearly one quarter of the Anconas exhibited under the A. P. A. rules last year and can give you show winners at living prices. My stock is of the very best blood lines in the world. Write for prices on stock and eggs. Circular and price list mailed free.

WILLARD J. THORNILEY, LIFE MEMBER OF A. P. A.

Box 36, R. D. NO. 1, MARIETTA, OHIO.

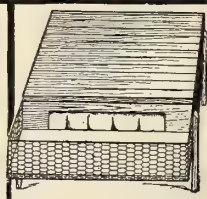

We
Pay The
Freight

125-EGG WISCONSIN INCUBATOR \$10 AND BROODER—BOTH FOR

Why pay more than our price? If ordered together we send both machines for \$10.00, and pay the freight. Hot water, double walls, dead air space between, double glass doors, copper tanks and boilers, self-regulating. Nursery underneath the egg-tray. Both Incubator and Brooder shipped complete, with thermometers, lamps, egg-testers—all ready to use when you receive them. All machines guaranteed. Incubators finished in natural wood showing exactly the high grade lumber we use—no paint to cover poor material. If you will compare our machines with others offered at anywhere near our price, we will feel sure of your order. Don't buy until you do this—you'll save money. It pays to investigate the "Wisconsin" before you buy. Read the letters below—they are actual proof from users, showing the success they are having with our machines. This is the most convincing evidence you could get. Send for the free catalog today.

WISCONSIN INCUBATOR CO.,

Box 21, Racine, Wisconsin.

WISCONSIN INCUBATOR CO.

Dear Sirs:—Received incubator from you last April and had very good success. From 1st hatch got 109 chicks from 115 fertile eggs; 2d, 120 from 124 fertile eggs. Am well pleased with \$10 machines. Will hatch as many as any high-priced machines. Mrs. Henry Beckwith, Muscoda, Wis.

WISCONSIN INCUBATOR CO.

Would not take \$20 for my incubator, if I couldn't get another. I set it 3 times—from the 1st hatch I got 105 chicks; from 2d, 112; and from 3d, 116 chicks from 120 eggs. Chickens are healthy and strong, and I lost hardly one. I think you can sell 12 here. Mrs. M. Fisher, Wakonda, S. D.

WISCONSIN INCUBATOR CO.

Gentlemen:—I received your incubator and brooder last March. Am perfectly satisfied with results. From 120 eggs, (20 not fertile), I got 93 chicks, making 98 percent. Don't think I could have equalled this with any other incubator. Arthur S. Allen, Thayer, Ill.

The Highest Honor at the Great Chicago Show Dec. 1908 Was Awarded to Miller's White Rock Cock

Winning the champion silver cup for best bird in the show, all varieties competing: Besides 1st cock, 1st hen, 2d cockerel, 2d pen, 5th pullet gold special for display and White Plymouth Rock Club special for best cock and hen. At Indianapolis February, 1908 the highest honor was awarded to my cockerel winning A. P. A. gold and silver medals for best cockerel, in the show and 1,2 cock, 1,2 cockerel, 1,7 hen, 1,3 pullet. This is another proof of the high quality of my birds.

White Plymouth Rocks

Are considered by everyone who has bred them to be the most beautiful and profitable fowl there is. In Japan, Australia, New Zealand, England, Alaska, South Africa, Java, China, Germany they have given excellent results as egg producers in all parts of the world. Why ponder over the matter what variety to buy when it has been proven that White Plymouth Rocks are the most beautiful and profitable.

U. R. FISHEL'S

White Plymouth Rocks have won more prizes at the largest exhibitions than any other breed, while as egg producers they have no equal. I have for sale this season the best lot of cockerels I have ever offered. Prices \$2, \$3, \$5 and \$10. Breeding pens of excellent quality. Utility Flocks, any number desired. Never forget the fact that U. R. Fishel's White Rocks are conceded everywhere to be

The BEST in the WORLD

Also remember no other breeder of this variety can give you the blood lines I can. Also remember our birds are strong, vigorous, farm reared stock, and they cost you no more money than poorly bred, small yard reared birds. Send Two Dimes for my 56 Page Catalog, the most elaborate and instructive poultry catalog ever issued. It is a household word that U. R. Fishel more than pleases his customers.

Poultry Raisers

Know, Just What

I Want to Tell You

Out of my experience I have been telling others how to make more money with their poultry. No matter whether you have 50 chicks or 500 they ought to make more money for you, and I can tell you how to get more money out of them. Don't be afraid of cold weather. With

Queen Incubators and Brooders

you can have summer conditions with large hatches, healthy, fast-growing chicks right in the middle of winter, and you can get fliers and broilers on the earliest market when prices are highest and most profitable.

Last year while all other incubator manufacturers complained of falling off in orders, the sale of Queen Incubators more than doubled. Our business grows because Queen machines absolutely "make good" for our customers.

Note Sizes and Prices

80 Eggs . . .	\$ 8.00
130 Eggs . . .	10.00

200 Egg Victor Incubator

The cut away corner shows the Vitals of an Ertel Incubator. Note the egg trays and nursery. See the triple walls and double glass doors. The new side regulator leaves the top clear. The lamp is a big one with metal chimney and the heating tank is 14 oz. copper. An incubator built to give satisfaction for years to come.

Are you using Ertel's Poultry Diary

3 Reasons

Why You Should Get This Book

1. Its Record Forms
2. Its Hints and Helps
3. Its Guidance in Selecting Machines

It shows how to keep records that tell what your poultry is producing in the way of profit. There are spaces for eggs laid, chickens hatched, what your feed costs and what you get for what you sell. No other way can you figure out what you are making. Poultry raising is a business which must be conducted on business lines. To succeed you want modern machinery, and business-like methods of recording the results. This book provides the blanks for keeping the proper records.

It gives hundreds of hints and helps that will make it valuable in any poultryman's library. The practical experiments our experts describe show the lines on which the most successful work can be done. How to have laying hens when eggs are dear. How to get broilers on the market while prices are up. How to raise the heaviest fowls. All information that may be of utmost value to you.

Ertel's Poultry Diary also tells about the latest and best incubators and brooders, and how you can get them at prices that are low, and have freight paid to your railroad station. It describes the improvements we have made this season to conform to the suggestions of the United States Department of Agriculture.

Better write us today, and get the advantage of the information this book contains. Use this coupon or drop us a postal card mentioning this paper.

AN AUTOMATIC MOISTURE REGULATOR

I have the honor to offer you the first moisture regulator to regulate the moisture in the hatching chamber. A device that not only supplies moisture, but turns it on and off *automatically*, as needed.

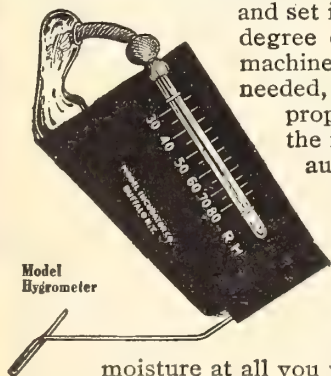

The Model Moisture Regulator

Controls the degree of humidity in the Model Incubator just as the famous Model Thermostat controls the heat.

The Model Patent Automatic Moisture Regulator can be quickly and easily adjusted to any Model Incubator, old or new. There is nothing complicated about it, and it is not difficult to attach it to the Incubator. A special Hygrometer is sent with each Regulator. This is simply filled with water

and set in on the egg tray near the thermometer that registers the heat, and the degree of humidity is read the same as the degree of heat is read. When the machine is heated up and the Hygrometer shows that additional moisture is needed, the water valve is adjusted so that it lets in a little water. When the proper degree of humidity is obtained the regulating nut is adjusted so that the flow of water is shut off, and after this it will turn water on and off automatically. If the weather is too dry for normal hatching conditions moisture will be supplied automatically thereafter. When the weather is normal and there is enough moisture in the hatching chamber the supply of moisture will remain turned off indefinitely. On the other hand, the "wet sand tray" and other devices continue to supply moisture whether it is needed or not. It has been proven time and again that too much moisture will do more harm than too little, and these devices constantly err on the side of too much. If you want to supply

moisture at all you want a Model Patent Humidor and Moisture Regulator.

CHAS. A. CYPHERS, President, MODEL INCUBATOR CO.
301 HENRY ST., BUFFALO, N. Y.

MODEL PATENT FLAME EXTINGUISHER

New this year, is a practical device that will put out the flame before the burner or oil can become over-heated.

The burner and oil can only become over-heated through the operator turning a flame high enough to smoke. With the New Model Extinguisher, within one or two minutes after the lamp flame smokes, and before the burner can become over-heated, a small fusible link, attached to the base of the chimney part of the heater, is melted and releases a smothering cup suspended in the top of the chimney flue, and the flame is extinguished instantly. This is on the same principle as the link used for fire protection in sprinkler systems, and to hold fire doors open, etc., in large Mercantile and Factory buildings.

Before oil can be set on fire it is necessary to heat it. In all oil-burning lamps it is necessary to heat the burner before the oil can become heated. With the Model Patent Flame Extinguisher it is utterly impossible to heat the burner above a normal point without extinguishing the flame. It is impossible to conceive of a more perfect safety device.

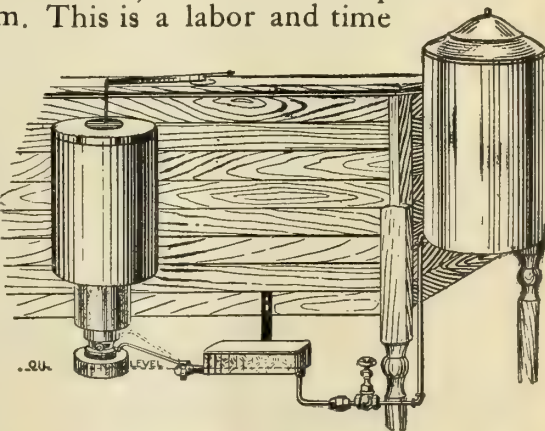

All Model Incubators are now equipped with the Model Patent Flame Extinguisher.

The Model Patent Automatic Lamp Filler

Is the greatest economizer of time and labor ever put on an incubator or brooder. It keeps the lamp filled throughout the hatch, and maintains a uniform oil level which insures a uniform flame. The lamp fount is reduced to diminutive size and is kept automatically filled from a barrel or tank; which can be placed at a distance, or even outside the incubating room. This is a labor and time saver for those operating a number of Incubators or Brooders.

This apparatus complete consists of a small lamp bowl, regulating float valve and connections for either side, i. e.—the feed pipe that drops into the lamp bowl and the supply pipe, including the union and main line valve. From this point it can be connected up with a quarter inch pipe to a barrel or oil tank of any kind that sits a foot or more higher than the float valve. The main line pipe can run along a row of incubators or brooders, taking in one after another.

As always, the improvements in the Model show distinct progress, insuring biggest hatches with lessened labor. Send for new descriptive literature.

CHAS. A. CYPHERS, President, MODEL INCUBATOR CO.
301 HENRY ST., BUFFALO, N. Y.

Greatest Combination Offer of Modern Times

By special arrangement with the publishers of Modern Priscilla, Pictorial Review and Ladies' World, we are enabled to offer these three high-class magazines with American Poultry Journal for one year for only \$1.35, and in addition give one Dress Pattern.

American Poultry Journal,	50c	\$2.65
Ladies' World - - -	50c	
Modern Priscilla - - -	50c	
Pictorial Review - - -	\$1.00	FOR
One Dress Pattern - - -	15c	\$1.35

If you purchased these magazines from your news dealer for one year the cost to you would be \$4.35. You will therefore be making a saving of \$3.00 if you send us your subscription now.

American Poultry Journal is the oldest poultry publication in America, and contains more valuable information for poultry raisers than any other poultry paper published in the world. In addition to this there will be five more of those handsome full-page colored plates of poultry inserted during the coming season, any one of which is worth more than the price of a year's subscription.

One of the special features of American Poultry Journal this season is the continued story of the Walling Family and their experience in the poultry business. Much valuable information for the amateur is given in this story. There will also be many new features added from time to time, which will always keep American Poultry Journal at the top.

Modern Priscilla is one of the best Embroidery Magazines published. It is the recognized leading Fancy Work Magazine of America. It is the undisputed authority on all kinds of embroidery, knitting, crocheting, lace, costumes, lingerie, and home decorations. It is filled from cover to cover each month with designs, instructions, descriptive articles, and valuable information. Aside from the strictly fancy work departments, there are departments devoted to China, oil and water color painting, stenciling, pyrography, leather work, basketry, and the like. It has many helps for housekeepers, and is a real good magazine for the home.

Pictorial Review readers appreciate the value of the up-to-date minute fashion service of that magazine. It has four foreign offices, managed by fashion experts, in Paris, London, Berlin, and Vienna. It keeps its readers in touch with what is newest and most smart in seasonable style. Pictorial Review is not solely a fashion magazine.

Its fiction is clever and interesting, its articles broad, and of national interest. Some of the regular departments and practical lessons in home dressmaking, millinery, crocheting, housekeeping, and household finance, sanitation, home decorating and furnishing, money-making suggestions for women, the care of children, a page for elderly people, wit, humor, and puzzles, echoes from the stage (illustrated), etc.

Ladies' World is recognized as one of the foremost Ladies' Household Magazines. It is bright, entertaining, wholesome, practical, carefully edited and thoroughly up-to-date. For 20 years it has been steadily improving in quality, and is unquestionably the cheapest high-grade domestic magazine published for women in this country. It is profusely and artistically illustrated and the handsome colored covers are changed with every issue. It contains from 36 to 44 large pages, size of Ladies' Home Journal. It gives more for the money than any publication in its class. It is a practical magazine for progressive women.

Remember, the price of this Combination is only \$1.35. Fill out your order today and send it to

THE OLD HEN CAN HATCH AS WELL AS THE PHILLIPS UTILITY INCUBATOR

She can hatch perfectly, but how often does she do it? Doesn't she unusually have unfavorable conditions to contend with and consequently fall 20 to 40 per cent, short of the perfect hatch she is capable of? **The Phillips Utility Incubator** is proof against the difficulties the poor old hen has almost always to contend with, consequently its hatches are uniformly excellent. Don't take my word for it without proof. Buy one of the machines with a thirty day unconditional return privilege and if it does not uphold every claim I make for it, send it back and I will return your money right off the reel without any back talk. **My Five Years' Guarantee** of a hatching efficiency of 85 per cent or better protects you fully after the the thirty days expire. 56-egg \$6.00, 120-egg \$10.00, and 240-egg \$16.50. I also manufacture the famous **Defiance Incubators**, the best cheap hatcher made. Strong guarantee, liberal trial offer. 50-egg \$3.48, 100-egg \$4.95 and 200-egg \$7.90. More agents wanted. Catalogue free. **GEO. PHILLIPS INCUBATOR WORKS, Geo. Phillips, Prop., Box 3301, Ridgewood, N. J.**

Look at the above report of the Crystal Palace Show of England. **Note the Increase in Orpingtons and the Decrease in all Other Breeds.** Remember what we predicted last year, watch the White Orpingtons for the next three years in this country. Send for our catalogue. **Kellerstrass Farm, Kansas City Mo., originators of "Crystal" White Orpingtons.** We breed only the one kind.

For High Quality

Columbian and Silver Wyandottes address
J. F. VAN ALSTYNE, NIVERVILLE, N. Y.

48 BREEDS Fine pure bred chickens, ducks, geese and turkeys. Northern raised, hardy and very beautiful. Fowls, eggs and incubators at low prices. America's greatest poultry farm. Send 4c for fine 80-page 15th Annual Poultry Book. R. F. Neuber, Box 844, Mankato, Minn.

HIGHEST SCORE EVER WON

100 Envelopes, 3 1/2 x 6 1/2 inches, an extra strong, thick, smooth, slick, white writing face, and 120 Letterheads, 8 1/2 x 11 inches, heavy, hard, smooth, slick, pure white writing paper, all artistically printed and illustrated with latest new Standard cuts of your breed for only \$1.00. Express charges paid by me. Better printing for the price was never done. No order less than \$1.00 filled. Name your Express office. Cards, tags and egg labels same price as above.

Address, J. R. HUDSON, Hardin Springs, Ky. I have seen samples of Mr. Hudson's printing. It is very nice; he is perfectly honest.—EDITOR

Greider's Book on Poultry

Illustrates 60 leading varieties; contains fifteen attractive chromos. Directions for care of fowls, building houses and equipment, increasing egg production, preventing disease, etc. Simple, concise, easily understood. All poultry supplies at reasonable prices. This valuable book, postpaid, 10c.

Greider's Cermicide is a safe, certain cure for lice and other insect pests. Is also an excellent disinfectant, prevents spread of disease. B. H. GREIDER, RHEIMS, Pa.

CAPON TOOLS

CAPONS bring the largest profits—100 per cent more than other poultry. Caponizing is easy and soon learned. Progressive poultrymen use **PILLING CAPONIZING SETS**. Postpaid \$2.50 per set with free instructions. The convenient, durable, ready-for-use kind. Best material. We also make Poultry Marker 25c, Gape Worm Extractor 25c, French Killing Knife 50c. Capon Book Free. G. P. Pilling & Son, Philadelphia, Pa.

RHODE ISLAND REDS

The "mortgage-lifting" poultry—now have a book worthy of the breed. This work tells where the Reds came from, gives the standard in full, and contains a wealth of practical facts. It shows the superiority of the Reds as business hens, for fanciers and as the best breed for farmers. Housing, feeding, attention when sick, etc., are discussed in a way that will help every poultryman.

At Last—Real Color Pictures!

In this book for the first time chickens have been pictured true to life. Every picture is from a photograph—a typical bird of each sex by the wonderful new French color photography. No oil painting can surpass these color pictures in beauty, and they are absolutely true to life. Such pictures in colors have been the dream of poultrymen for decades—in my book that dream has come true at last. Each of these color engravings cost over \$100 before a single perfect picture was secured.

HOW TO GET THIS BOOK FREE. Send me ten 2-cent stamps to help bear the cost of the book—it will sell in the regular way for at least fifty cents, so you'll get a bargain. Each copy contains relative 20 cents on your first order of me of eggs. When you become a customer, the book has cost you nothing—and until then 20 cents is a trifle compared with its value. Send now—edition is limited; no more can be made within a year! Don't miss it; order today.

Citizen's Farm NEWPORT, R.I.

SILVER LACED WYANDOTTES

The only pure, genuine strain known as the only Ray-Whittaker-T. E. Orr strain; line-bred for nearly half a century. No Dark Brahma-Hamburg cross, no English adulterating blood, no outside blood of any description. Continue to maintain that high record that when first announced startled all poultrydom, creating the greatest boom ever experienced by any variety today, by tests the best all point bird in existence. The best breeding strain to produce standard of Perfection requirements. Have bred big prize winners for years. Customers' prize winners and always satisfied. Can convince anxious inquirers. This is the best line of Silvers in existence. Have some bargains in last year's breeders and young birds. Eggs \$5 per set, two sets \$8. JNO. S. ORR, Augusta, Ky.

At the Southern Wisconsin Poultry and Pet Stock Association exhibition held at Janesville January 4 to 9, 1909, we won as follows: First and second cock; first, second and fourth cockerel; second and fourth hen; second, third and fourth pullet; first pen. The American Buff Leghorn specials for best shaped male, best colored male, best shaped female. Special for highest scoring cockerel. If you will write us, and tell us exactly what you want, we will be glad to quote prices. N. B.—We breed our winners, also our layers, and our layers can't be beaten.

Morgan Poultry Farm, Route No. B 2, Beloit, Wis.

NORTHUP'S MINORCAS SINGLE AND ROSE COMB

Special Sale of Grand Show and Breeding Birds. Cocks, hens, ckls. and pullets. Our S.C. Black Minorcas have never lost a special for large size and have won more than 3000 prizes for our customers in strong competition. Our Rose Comb Black Minorcas have won more 1st and 2d prizes than all competitors combined at New York, Boston, Philadelphia, Chicago and World's Fair.

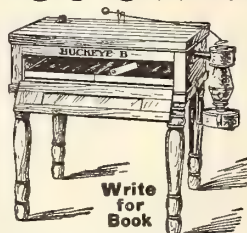

GEO. H. NORTHUP & SON, R. F. D. 6, Raceville, Washington Co., N. Y.

Partridge Plymouth Rocks and B. B. R. Game Bantams

WITH THE HIGHEST HONORS. We won at the big Detroit show January 1909, six firsts, seven seconds, four thirds and ten special premiums including the \$25.00 cut glass tankard and the Burns Hotel cup. Can you ask for better evidence of the superiority of our birds. Send your egg orders now to be sure of getting them early. Ship eggs at any time you state.

Petersen's Houdans

Reign Supreme at the Nation's Greatest Shows

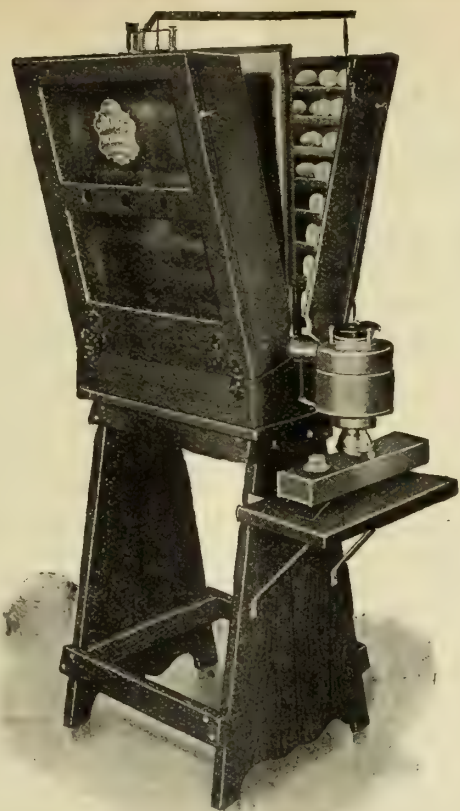

My record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited. I won 1st cock, 1st and 2d pullet.
BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.
BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.
BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets; \$100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.
BOSTON, 1906. Judged the Houdan Exhibit.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdans. Also highest honors at Madison Square Garden, Philadelphia, Pan-American, Hagerstown, Toronto. No matter where you want to exhibit, no matter what the competition, I can furnish the winners. We do not exhibit at state fairs and smaller shows, nor enter into competition with our customers. Write for particulars.

Drawer 12, Pembroke, Maine

Cooling Eggs

NO DOUBT MANY POULTRYMEN

that have used our brooders and found them so successful and others that have noticed our advertisements have often wondered why we did not offer an incubator. To these and other poultrymen we wish to make an announcement.

The "ROOT INCUBATOR is now ready for you"

Mr. Root, the inventor of the CONTACT WARMTH incubators and brooders realized many years ago that the HOT AIR conditions under which eggs were hatched and chicks reared were unnatural, and to avoid these unnatural conditions he came to the conclusion that it would be necessary to hatch eggs and rear chicks by warming them by contact with a warm body.

With this method it is possible to hatch eggs without adding moisture, because the air that gets to the eggs has not been burnt or baked passing through heating drums, etc.

The ROOT INCUBATOR will hatch duck eggs equally as well as chicken eggs under the same conditions, without adding moisture or changing the ventilation. This is proof that it is built on the right principle, because a hen will hatch duck eggs equally as well as her own.

We have prepared a pamphlet under the heading of "ARTIFICIAL INCUBATION and BROODING," which every poultry man should read as it dwells upon some phases of this art never before dwelt upon. We will send a copy of this article free to anyone sending us their name and address.

THE ROOT INCUBATOR CO.,

Desk No. 4, CLEVELAND, OHIO

648 FIRST PRIZES Won by the "RELIABLE" INCUBATOR

Since 1896 the **Reliable Incubator** has been awarded 648 First Prizes at World's International Expositions, State Fairs, County Fairs, Poultry Shows and Incubator Exhibitions. 575 of these first premiums have been won since 1902.

These figures prove absolutely that the **Reliable** not only started in the lead in its race for supremacy, but has lengthened its lead as the years advance—competition can not displace it from first position.

The **Reliable Incubator** did not gain its enviable reputation by excelling its competitors in some "one" vital point—it combines so many advantages that competition can not rank with it.

A Few Points of Superiority

The **Reliable** is the only incubator on the market with a double heating system and inside heater, giving it a double safeguard against sudden chills, and double economy of fuel.

It has an automatic regulator which will not allow the temperature to vary one-half a degree during an entire hatch.

It has a perfect system of ventilation and systematically supplies its own moisture.

The best material only is used in its construction, and with even ordinary care it will last a lifetime.

It is absolutely safe—an explosion or fire has never resulted from its use.

It has the handiest egg tray, the best nursery advantages and the best record for successful hatching of all incubators.

It is made by men old in the incubator business—men whose achievements have been so successful as to compel them to build the biggest incubator factory in the world in order to properly care for their growing business.

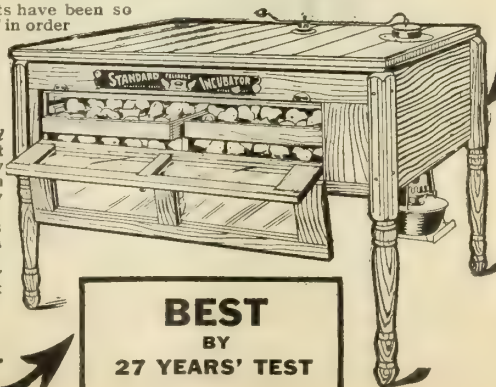

Every incubator is guaranteed to be exactly as represented, or money refunded.

Our Free Offer

We will send you absolutely Free, on request, our handsome, new, illustrated Poultry Book. It tells all about all kinds of poultry—how to raise the healthiest fowls at the smallest expense—how to get fertile eggs—how to test them—how to market them. It fully explains the process and advantages of incubation and shows the growth of the chick in the shell. Furthermore, it will tell you how to properly judge an incubator.

It contains beautiful illustrations of all kinds of fowl and valuable remarks by famous poultrymen. This wonderful work is a money-maker as well as a money-saver to any person interested in poultry raising.

We have only a limited number of these books on hand, and so that you may be sure of getting one, order at once—drop us a postal today; remember that these books are absolutely free while they last.

"Tyco's" Thermometers

Tell the Truth about Temperature in the Incubator and Insure Chick Life

A Lying Thermometer Will Kill Chicks.

A thermometer which tells you that a temperature of 106 or 107 degrees in the egg chamber is only 103 degrees, lies to you.

That lie will kill the chick in every egg in the incubator.

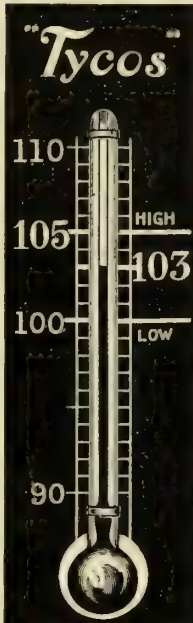

The Thermometer in incubation is more nearly parallel to the Thermometer in medical practice than any other use to which a Thermometer is applied.

Ask your doctor what the effect would be in his practice if his Thermometer lied two or three degrees.

A human temperature of 107 degree is the danger point, and calls for heroic measures

Suppose his Thermometer indicated 103 or 104 degrees when the actual temperature was 107 degrees. The result would be identical with operating an incubator at 106 or 107 degrees if your Thermometer lied and indicated 103 degrees,—sure death in the case of the chick, and probably with the patient.

Physicians are careful to know that their Thermometers tell the truth. You should be equally careful to know that your Incubator Thermometer tells the truth.

"Tyco's" Incubator Thermometers are made with the same relative care and skill as "Tyco's" Clinical Thermometers.

When a "Tyco's" Thermometer shows 103 degrees you know it is 103 degrees—"Tyco's" Thermometers do not lie.

Let us send you our little booklet entitled, "Thermometer Facts Worth Knowing."

It will tell you many things about Thermometers you did not know. The information it contains will enable you to guard against temperature difficulties, and possibly insure a successful hatch.

If you are planning to buy an incubator tell the manufacturer you want "Tyco's" Thermometer with your machine.

The manufacturer of any good incubator ought to be glad to have you ask for a "Tyco's" because he knows it is a Thermometer that will give you the greatest success with his machine.

Ask for a "Tyco's"—insist upon having it.

THE BANTA

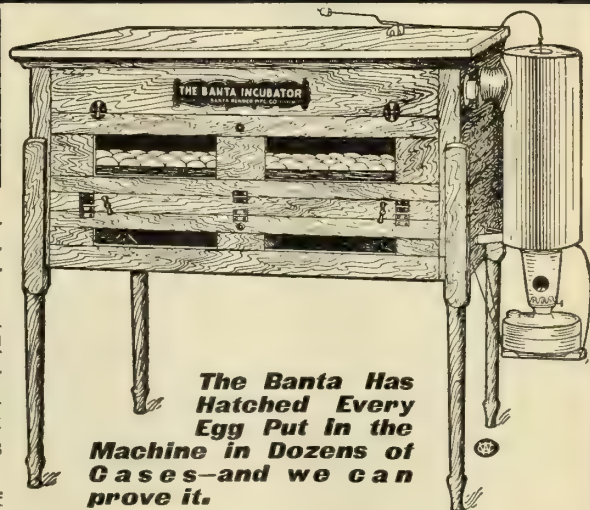

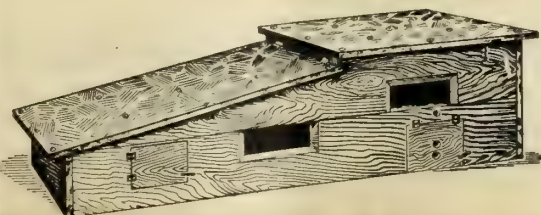

The Banta Incubator and The Banta Brooder were invented by a man who made a business of hatching broilers. He made a pronounced success with his own inventions.

Fifteen years ago he put **The Banta** on the market. It has done for others what it did for him. It was practical, and it made no difference about previous experience—successful

"Early Chicks" hatches always came out when simple instructions were followed.

The Banta has hatched as high as 100 percent of the eggs, and its average hatching percent is above the average hatching percent of other makes.

When you get The Banta Incubator and The Banta Brooder you get the result of a practical and successful poultryman. You get his experience, and he makes your success sure and immediate. The subject of "Early Chicks" is treated in an exhaustive manner in Bulletin No. 10. It is free on request, and we want your request. It will give you a lot of good points that are worth knowing. The Banta Incubator and The Banta Brooder will put you where you can get top prices for your broilers. You work to profit—why not work for a greater profit? We will help you.

The Banta Has Hatched Every Egg Put in the Machine in Dozens of Cases—and we can prove it.

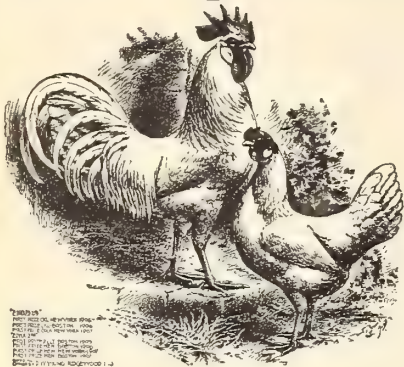

How to Feed for Eggs The Diseases of Poultry Poultry House Drawings and How to Build Them

Giving complete instructions for operating Incubators and Brooders. The Feeding and Care of Poultry. This valuable book is published by Mr. L. A. Banta who has had 15 years of actual and successful experience in the poultry business. Price, 50 cents. A copy free with an Incubator or a Brooder.

Madison Square Garden Show

**The Twentieth Annual Exhibit of the New York Poultry, Pigeon and Pet Stock Association,
Held Dec. 29-Jan. 2, 1909---The Most Beautiful, Valuable and Instructive Exhibit
Ever Held---Barred Plymouth Rocks the Largest Class, Closely Followed by
the other American Varieties---A Description of the Classes**

Written for American Poultry Journal by H. P. Schwab, Irondequoit, New York

Great was the twentieth Madison Square Garden Show. Great has been the verdict year after year until it has been a foregone conclusion that each succeeding show is an actual improvement over the preceding one. Grand have been the New York shows of the past, and strong the competition. We can safely say that this show surpassed all former ones in the quality of the exhibits, as well as in the general tone from all viewpoints.

It is remarked that the Garden is to be replaced by a sky-scraping office building and that this may probably be the last poultry show to be held in this famous place. We hope this is not so, and that some means may be provided to retain the Garden for future exhibits, but if this should prove to be the last Garden show it is a fitting climax to a most remarkable record of successful poultry exhibits.

Poultry history will tell future generations of the deeds of these days, and its most interesting pages will, I am sure, contain the accounts of the Madison Square Garden shows and the supreme efforts in particular of those two loyal fanciers, Mr. H. V. Crawford and Captain Griffin.

The banquet held on Thursday evening was largely attended. It was a notable affair. The most pleasing of all was the presentation of a silver tea set to Mr. Crawford and of a one hundred dollar gold purse to Captain Griffin.

The incubator men were out in force, and from all appearances were happy, as business was apparently extra good. Several hatches were brought out during the show, and as is usual, the little chicks were a drawing card.

Bone cutters, trap nests and general line of poultry supplies were well represented by the leading houses and makers. Each year finds something new, and we know of no reason why any one can't raise poultry successfully. Nearly all the poultry journals had attractive booths. Newspaper row did its share of business, judging by the crowd of people that were seen standing around at all times. Several handsome prize cups were also here displayed.

The giants of fandom were arrayed against one another in Barred Rock row, in the White Rocks, White Wyandottes, Leghorns, Orpingtons, etc., making it the hottest of the hot ones. Never were the awards more eagerly sought, and never the honors of greater value to the winners. Let every true fancier envy the successful one, and look with charitable thoughts to those who gallantly fought a losing fight. While there were but five awards, excepting the Barred Plymouth Rocks, which had eight awards, there were several times that many of most deserving specimens whose true value can only be placed at small fractions below those who were successful. In this we do not want to detract a particle of interest from the winners, but we do wish to strongly impress upon all that there was real merit all along the lines.

Seen and Heard at the Show.

Grove Hill Poultry Yards, besides their regular winning on Barred Plymouth Rocks, won the champion male special on their first cock bird. Also specials for four best males, shape male and the club specials for both cockerel and pullet mating pen. Their birds, while showing the finer quality, were still unfinished, and far from their best condition. Their males have the scrappy bar so greatly desired by all. Besides being extremely clean and of the proper shade of color, they have grand heads, which is another characteristic of this line. In Single Comb Brown Leghorns, they also won the most desirable prizes offered on a grand line of males and females.

Charlie Wells was there again. He is just the same and plies his old habit of getting in the money as he did years ago. His first and champion hen, "Fluffy Ruffles," of last year, again won the same high honors, a feat seldom if ever accomplished. Fluffy looks good for years to come. She is simply unapproachable. Mr. Wells also won third and fourth hen with two other grand specimens, third and seventh cockerels, and fourth breeding pen. His pullets were young and not of size, but they show a quality distinctly their own, and were admired and sought after by all. Clean and of the proper shade of color, they have grand heads, another strong characteristic of this line.

Gardener & Dunning, with Mr. Newton Cosh, were on deck and made a strong showing. Their first pullet was just about the best we have seen to date, grand in size, and winning the shape special, as well with color and style of barring that leaves but little to be desired. They also won second and fifth cock, second hen, eighth cockerel and fifth pen and specials. They also won the cup for the best cock, hen, cockerel and pullet.

Bradley Brothers made an exceptionally strong showing in all classes, but were unfortunate in not having their birds at their best. At this great show birds must be in the pink of condition, trained right down to the minute to win. Their males were a grand, strong lot, and we don't remember of ever seeing fourteen cockerels with better under barring than they showed, but they were principally unfinished in tails and backs, and in some cases had not cleared enough. Their second pen was a beauty, with four even quality females of the grandest type and color. The male was without doubt one of the finest we have ever seen, but his tail and back needs four weeks' more time to show at its best. Their males all have grand head points and strong eyes, and the deep, full breast we so much admire. Special for best headed female was awarded them on a perfectly clean beak and specimen with extra fine comb and eye.

A. C. Hawkins, of Royal Blue fame, came back after some years and won first cockerel and color male special

on a fine big fellow that meets all requirements. He is a grand combination of high quality in every line. Another cockerel of his was simply grand in color and head points. When he is properly filled out he will make one of the best.

The Ringlets were there, and here again when we consider the competition they got there strong. So close to the blue with second cockerel and second cock, but to fail on condition principally is surely hard luck tale to tell, but such is the fact. Mr. Thompson won first and third on

WHITE PLYMOUTH ROCK.

First prize pullet at the late Chicago Show. Bred owned and exhibited by H. W. Halbach, Box A, Waterford, Wis.

extra pens and two extra strong pens properly mated and shown to the best advantage. Thirty-two pens were shown and from this the reader can draw his conclusions as to the quality required to win.

Frank D. Hamm, Jonas Hayner and G. W. Hilson each received good mention on pullets. They stick well, and one of these days will walk away with the blues.

White Rocks.

We were pleased to meet Mr. W. R. Graves, his wife and his birds at this show. He made a successful showing as well as many new friends. We were glad to note the hearty greeting extended him from all sides. His first White Rock cockerel is a wonder pure and simple, the ideal in shape and color; in fact, he won the class color special. He also won first and second pullets on grand birds. In White Wyandottes he won two places. Mention of those will be made elsewhere.

Greystone Poultry Farm won well in White Rocks; besides the regular prizes they were awarded champion male and female and best headed male and colored female. This should satisfy any one, and Mr. Davy received our congratulations. This is the second championship won by this cock, and the third time he received the shape special at New York.

The Owen Farms made a splendid showing with their popular varieties. We will have to give Mr. Delano credit for knowing shape and also color, and we don't blame him a bit, after inspecting several of his birds, for feeling that the judgment on some of his birds was unwarrantedly severe. Their winnings will be found elsewhere, and here will mention their winning of best display on White Rocks; also special for best. On White Wyandottes they also won second prize.

Arthur G. Duston just sat down in it and gathered in just about all the honor and glory any man could in this competition; he not only had the goods right with him, but the same smile we have always seen. Mr. Duston richly deserves

this winning; he has labored hard and long through all sorts of conditions, and it is indeed a credit and pleasure to see honest efforts and persistency win out. For years at this great show Mr. Duston has been it. His long record is a roll of honor. Gradually, but surely, he has worked his way up to the position he is sure to credit. While at New York he sold a trio of his choice White Wyandottes to the Mexican minister to England. Mr. Duston won fifth cock, second hen, first and fourth cockerel, first and third pullet, second hen, first display and nine specials.

W. B. Barton, exhibitor of Barred Rocks and Silver Wyandottes, won first pen on his Silver Laced Wyandottes. His other entries were hardly in the condition we would wish. They have the type, and while open are strongly laced.

Hillcrest Farm were among the best winners in Partridge and Silver Plymouth Rocks, showing grand markings, with fine type. Phenomenal progress has been made in these varieties. This line has been winning at the best shows for years, with a quality that is most deserving.

Mr. J. W. Poley made nearly a sweep in Buff Rocks. His winning of three first prizes was as clever as it is great. His birds were at their best, nice in shape as well as in grand color and condition. Was also awarded color special on male and female.

There were Orpingtons there. William Cook & Sons were there were a full line, making a great record, winning nineteen firsts and many specials. Their first White Orpington cock won three specials, while their black cockerel won both the shape and color specials. Their Buff Orpington cock, No. 1165, shown here out of condition, is winner of twenty-nine first prizes, and as we understood an imported bird. The winning of three first prizes in any of the Orpington classes is a record seldom equalled, and the Messrs. Cook are to be congratulated for this winning on their White Orpington's.

Mr. Lester Tompkins, the Rhode Island Red man, of Concord, Mass., was there to judge the Reds. He reports plenty of birds at home with good quality. We thank Mr. T. for going over the Red classes with us when writing them up.

MIN-NE-HA-HA.

First Prize Winner Chicago, December 16-19, '08; Detroit, January 9-14, '09. Owned, bred and exhibited by Irving A. & Frank Churchill Sibley, South Bend, Ind.

Among the quality classes at this show we must, in justice to all, place the S. C. W. Leghorn close to the front. We have seen larger classes of Leghorns, but never more better than they were, with type as well as with phenomenal size. Combine these qualities with simply superb condition and magnificent head points, and then you can only begin to realize the kind of Leghorn exhibited by Mr. D. W. Young, of Monroe, Orange county, New York. To tell you of his winnings now is only a repetition of what has been

told of and done by him for some years past at this same show. Mr. Young's Leghorns stand out strongly in a class by themselves. For years he has won more points in prizes than all other exhibitors combined, his winnings this year included all specials and first prize pen, every first, second, third and fourth in each open class excepting one fourth prize, a winning unequalled by any other exhibitor in any other class. There is something to this line that is difficult to properly understand. They seem to own all standard requirements; in fact, excel the standard in many ways. Their finish is ideal, and they strongly denote the grand qualities Mr. Young claims for them. His fourth prize hen, Edna I., has won six first prizes at six Madison Square shows, and now in her seventh year wins fourth place. Last year she laid 107 eggs as a six-year-old and she has an official record of laying 29 eggs in 31 days. The first hen here weighs 6½ lbs., while the first pullet of 1907 wins second hen and weighs 6 lbs., the first cockerel of 1907 wins first cock here, and has one of the best heads I have ever seen on a Leghorn male. This strain averages much better in size than we usually see, and with this extra size they carry a perfect type and finish. While there is no question of

color and clean cut barring. Second: Another wonder, grand in shape and most beautiful clean cut straight barring. While about one-half shade strong in color, we thought her well placed, for this character of barring is desired and must receive its due. Third: A hen close up. Splendid in every way. Surface color and under barring of the very best. Just a trifle short in tail. Fourth: In quality very close up. Straight and narrow barred surface and under-color. Extra shape, grand eye, etc. Under-color, while extra fine, was just a mite strong. Fifth: A most beautiful specimen, clean and sharply barred. The white and dark bar as uniform in width as we have seen. Strong eye and extra head points. Our opinion is she was laying and had gone by from her best show condition, losing naturally in clearness. The sixth, seventh and eighth hens were also of extra quality in shape and color. This was without doubt the best and strongest class of hens ever shown at the Garden. The first five in particular, and we doubt if their equal will ever again be seen at any one show.

Cockerel—First: A true Plymouth Rock from every point of view, also wins color special. Narrow and clean barred, very sharp under-color surface even in shade from head to tip

The above reproduction shows one corner of apiary at the Medal Buff Plymouth Rocks. Mr. Laphan thinks that no poultry

plant is complete without a few swarms of bees. Dearborn Poultry Yards, Dearborn, Mich., the home of the Gold

the exhibition quality, there can also be no question of their practical qualities, for if ever chickens strongly showed the ability to lay eggs then these do.

The classes and winners as we saw them:

Barred Plymouth Rocks.

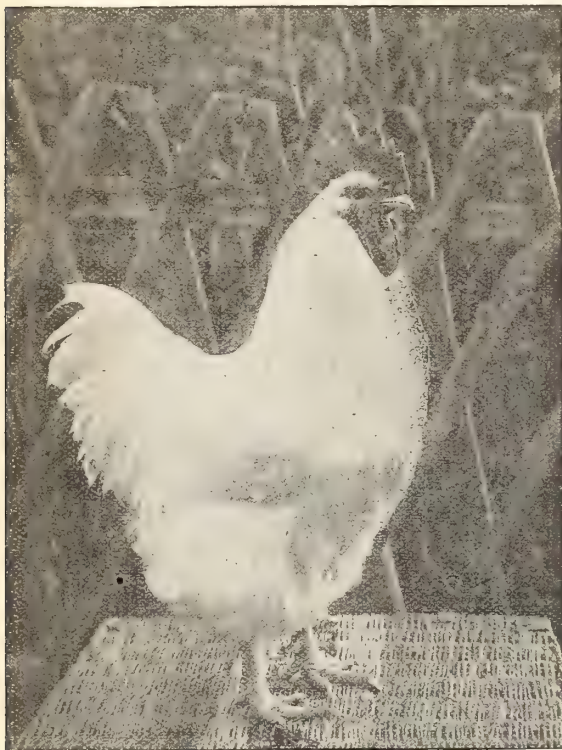

Cock—First: A finished and very even colored bird. Clean barred surface and grand undercolor. Extra head points and beautiful type. Also wins shape special. Second: An extraordinary fine barred cock, sound color and barring. Shown very much unfinished in tail. Third: Beautiful in comb and head points. Strong eye. Good shaped, narrow barred, but shown just a little green. Needs three weeks more to show at his best. Fourth: Very similar to third in color and style of barring. A grand bird. He did not stand up on judging day, but later in the week felt at home and showed his wonderful quality to advantage. Fifth: Another similar to third. Typical and an extra quality bird from every point of view. The sixth, seventh and eighth were also cocks of rare quality, with both shape and color qualifications.

Hens—First: This was again the famous Fluffy Ruffles, shown with wing not fully finished. She nevertheless has every other quality. That placed her the unquestioned champion of this class. She retains her exquisite shade of

of tail, good form, strong eyes and extra nice comb. Second: Very close up. Shown carelessly with black feathers in breast and hackle. Extra fine form, grand even color and very evenly barred. A most desirable bird. Third: A real beauty not shown at his best. Mr. Wells is a busy man, but had he given this cockerel more attention he surely would have made all others go hard to beat him. Good size and shape and a wonderful strong, even colored surface and under-color. Fourth: A choice, even colored and sharp barred male. The shade of color and style of barring, the most desirable kind. Good head and grand eyes, legs, etc. Rather unfinished at this time. Fifth. Another very hot one. Typical in every line, good eye and fine head points. Deep, full breast with just the back we like to see. Condition of tail came in here also. He wants two or three weeks to show at his best. This should give him proper length of feather and clean him up just the mite he now lacks. Sixth, seventh and eighth were also grand, clean, shapely birds. Of 66 cockerels shown we had 32 marked up for final consideration in selecting the winners. A record that speaks stronger than any words I can add to fully describe the general high quality of this class. Cockerel No. 230 thought by some should have had a place. A grand barred bird, uneven in neck, back and tail color, and one good and one very poor wing. Lacked in breast and

body shape. We would have had to pass him by on shape had his color been all it appeared to be from the outside.

Pullet—First: A real gem. We had expected something extra in this line and found more than we were looking for. She also won the female shape special. Even color throughout, clean cut barring of regular width, with the best shape and barred breast we have seen on a female. Strong eye, clean legs, etc. **Second:** Rather close up. Shape

S. C. White Orpington Cock owned by William Cook & Sons, Scotch Plains, N. J., originators of all the Orpingtons. Father to their first prize Madison Square 1909 Cockerel. This bird is a winner of many firsts.

grand, barring regular and extra clear, color of choicest shade throughout, not finished quite as well as first. **Third:** A simply grand female in color, the contrast being strong; rather young and not fully developed. **Fourth:** A superb barred pullet half a shade strong, but this character of barring is bound to win a place. Wing also a mite strong. **Fifth:** A fine pullet with a grand shade of color. Probably past her best form. **Sixth, seventh and eighth** were real good ones, close up, with choice quality and very nice, shapely birds.

Pens—First: An exceptionally well matched pen. The male of grand shape and head points. Sound, strong color, with very fine wings, etc. The four females very even in color, shape and quality. All had clean necks and extra fine tails, good legs and clean beaks. **Second:** A most beautiful male, clean cut and sharp barred, unfinished in tail, which was bound to hold this pen back. The four pullets were grandly matched, a half shade lighter than the first pen, and it was impossible for me to find a particle of foreign color in any one of these. **Third:** Very similar to first pen in females. Male not quite as good. **Fourth:** This pen looked like a winner until we found one female that failed to match the others in size. The male was a finished beauty, strong in both shape and color. The females were extra strong in color and of a proper shade. **Fifth:** A very fine pen of birds. The females were well matched, excepting one that was laying during the show and had lost some of her bloom. The male also damaged his comb in some way, while at the show. We greatly regretted having to place this pen down so low on account of an accident. **Sixth:** A grand pen, well matched and a very choice quality. Cockerel was far from its best form. No. 2,553 a superb pen. This number was in error overlooked. One of the best males in the show was here and the females were typical and of choice color.

Special Cockerel Mating Pen (Bright)—A good winner. Clean, strong, typical male and four strong though clean barred females. Clean necks and wings, eyes, legs, etc.

Special Pullet Mating Pen (Bright)—A beautiful colored male of proper shade and finely barred, wonderful wing, females very clean with good points.

White Rocks.

Cock—First: A finished bird in best condition. Four-point comb, strong eye, and snow white. **Second:** Beautiful in shape and color. A true Plymouth Rock from every point of view. Not fully finished in tail. **Third:** Grand type, strong head points, etc. **Fourth:** Close up; we thought extra well of this fellow. **Fifth:** Up on legs and eye not as strong as it should be. Choice five-point comb. No. 308 a fine white bird of grand size and type.

Hens—First: Very large, clean legs and strong eyes. Chalk white. **Second:** A grand hen with just the back we like to see. White and finished perfectly except in tail. **Third:** Rather long and not fully filled in breast. Strong red eye and clean legs. **Fourth:** Good back, grand comb and head points. **Fifth:** Close up, but not as good in head points. Nos. 330, 335, 340, 351 and 353 were all hens of exceptional merit.

Cockerels—First: The beauty of the class, finished in detail, chalk white, and of exceptional type. The proper length and shape in back and a deep, full breast. Good comb, red eye, etc. **Second:** Another wonder, but not as well finished. **Third:** Six-point comb, pure white, fails on shape. **Fourth:** A big fellow up on legs, not quite filled out. **Fifth:** A beauty in shape and color, tail not fully developed. No. 356 a fine, large, white bird of better than average type. Nos. 371, 373 and 383 all exceptionally fine specimens.

Pullets—First: Grand type, head, legs and eyes. Good in back, shape and tail, snow white. **Second:** Close up, extra yellow legs and red eye. Comb not as good as first. **Third:**

BROWN PLUSH IV
BRED OWNED AND EXHIBITED BY
Wm. E. BRIGHT WALTHAM MASS.

SINGLE COMB BROWN LEGHORN.

It is doubtful if there was ever a more famous hen or greater winner in any variety than she and she has been fully as remarkable as a dam of winners as for her own winning quality. She was the first hen at Philadelphia, in 1901, and also in 1902. She has won first prizes at New York, Boston, Pan-American Exposition, and in her sixth year won third at the St. Louis Exposition. Her daughter was first hen at the same show and her great-granddaughter first pullet, while three of her great-granddaughters were in the first prize exhibition pen. Her daughters have also won first prizes at the Pan-American Exposition and at Boston, New York, Philadelphia and other large shows. The hen is now fully nine years old, but is rugged and in good condition at the present writing. She is also an extra large hen and as splendid in form and type as she is in color and markings. Her actual weight is 5½ pounds, although she looks but little larger than the ordinary Leghorn. Bred and owned by Grove Hill Poultry Yards, Waltham, Mass.

Another grand one not fully developed in breast. **Fourth:** A well placed bird, strong in every way. **Fifth:** Another clean one shown well. No. 389, a chalk white bird of ex-

ceptional shape. No. 396 a hard one to pass, good in size and type. No. 412, this one looked extra fine to us, as did Nos. 405 and 407.

Pens—First: A beauty pen, grand type, male with five-point comb, extra in breast shape. The four females were very evenly matched, like peas in a pod, with the very highest grade of quality. Second: A grand pen, extra

MOIRHAWK,

First Prize Winner Detroit, January 9-14, '09. Owned, bred and exhibited by Irving A. & Frank Churchill Sibley, South Bend, Ind.

shape male with unfinished tail. Four-point comb and pure yellow legs. Pullets of fine quality, with extra head points. Third: Here again the male is shown not fully developed in tail. A hummer of a pen just the same. Fourth: Very close up, grand headed male. Fifth: A finely conditioned pen of grand birds with strong eyes, good legs, etc. No. 2,561 an excellent pen of birds.

Buff Plymouth Rocks.

Cock—First: A grand bird in shape. Second: Close up and a real good type. Third not as even nor shown as well. Has good quality. Fourth: Fine type and well placed. Fifth: This one looked very good to us.

Hens—First: A fine type of even and very clean color. Second: Again close up, with all the ear marks of a hot one. Third: Tails a mite undeveloped, but is still to be considered. Fourth: A real good clean hen, nice type. Fifth: Very nice in type and sound in color.

Cockerels—First: A beauty, well placed, very even shade of color. Grand type. Second: A good one, fine type and head points. Third: Not as well shown. Fourth: A very clean color. Fifth: Good type.

Pullets—First: A real good bird, appeared just past her best. Very clean in tail. Second: Good in color and type. Third: Clean buff, tail very good and clean. Fourth: One of the best buff birds we have seen. Extra even color, bright and clean, nice type. Fifth: Not as good in tail.

Pens—First: Very even in color and quality, good shape, etc. Male grand in type, tail not fully developed. Second: Grand in females, tail of male a half shade darker. Third: Fine, even colored male with grand head. Females show slight lacing. Fourth: Male with only fair head, part of the females not shown at their best. Fifth: A hot pen, but not shown at their best condition.

Partridge Plymouth Rocks.

Cock—First: A very fine shaped and marked fellow, good comb, and good in all points: Second: Very close up. His color was a marvel to all. Third, fourth and fifth also most worthy specimens.

Hens—The first, second, third and fourth were very even and a grand lot in both type and color. Fifth: Very clean and of extra fine shape.

Cockerels—First and second: Ran close, two as good as anyone could wish to see. Third: Fine type, of extra

color. Fourth: Clean and good color. Fifth: Grand type. The head points on all males were better than we expected to see.

Pullets—First: The gem of the class. Extra in shape and wonderful markings. Second: Very close up. A beautiful bird. Third: Good enough to make hot competition. Fourth: Grand in color, etc. Fifth: A very nice, but not as clean as the others.

Pens—First: A grand, even quality pen; the male showed very strong in type and color. The four females were finely laced and of good form.

Silver Pencilled Plymouth Rocks.

Five grand cocks were shown and well placed. Hens, first and second, were exceptionally clean and finely laced with grand type. Third also a good one in shape, etc. Fourth: Fine in type and markings. Fifth: Good, real good.

Cockerels—First: Very fine, clean and extra good head. Second and third: Close up, with plenty of quality. Fourth and fifth similar in type and good head points.

Pens—Three excellent pens were shown of this beauty breed.

Columbian Plymouth Rocks.

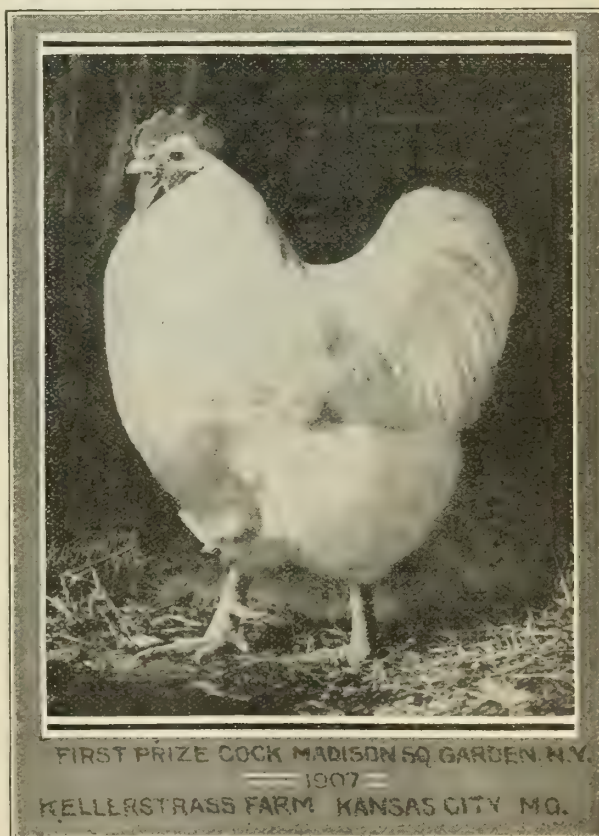

One cock, one hen, five cockerels and three pullets were shown. Marked improvement was noted in both shape and marking. First cockerel in particular showed strong color and markings, with good head.

Silver Wyandottes.

Cock—First: Fine in shape and good in marking. Second: High on legs, not as good in hackle. Third: Fails in back and comb. Fourth: Rather poor hackle and narrow back. Fifth: Grand in shape, fails in color. No. 549 another of extra form, but not shown at his best.

Hens—First: The star of the class. Wins on both shape and color. Second: Fails some in tail. Third: Not as good in breast color as we would like to see. Fourth: Dark in hackle, comb only fair. Fifth: Back color not as good. No. 559, a grand laced hen, very open, but strongly laced.

Cockerels—First: Fine in style. A little dark in hackle.

Second: Close up; not so good in comb. Third: Rather high in tail. Fourth: Poor colored back.

Pullets—First: Extra fine in color and shape. Second: Another good one, close up, but not as well developed. Third: Low in back, good color. Fourth: Fails on lacing.

Golden Wyandottes.

A small class of very good quality. The first cockerel looked extra well to us and was a grand winner.

White Wyandottes.

Cock—First: Beautiful finished bird: extra fine head, legs, etc. Grand type, shape of breast and back very fine, well arched neck. Second: Another well finished bird with very good head points, also good in type. Third: Head rather small and narrow, grand back and breast shape. Fourth:

A TYPICAL CRYSTAL WHITE ORPINGTON WINNER AND LAYER
BRED & OWNED BY KELLERSTRASS FARM, KANSAS CITY, MO.

Very blocky type. Not as good in comb. Fifth: Very trim and blocky. Elegant back, broad breast with finished tail.

Hens—First: Just the kind for us. Broad, deep, blocky type and chalk white. Second: Extra fine comb and shape. She surely ran the other a close race. Third: Another real good one. White and of the proper type. Fourth: Good in all points of shape and excellent in color. Fifth: A grand hen of superb quality. We liked her back extra well.

Cockerel—First: An ideal finished bird. Comb finely pebbled. Grand in shape and finely arched neck. Snow white and shown in the best possible condition. Second: Another extraordinary specimen in both type and color. Grand in all head points and shape of breast, back tail, etc., arch of neck very fine. Third: Close up, of grand type and general formation. Condition perfect, wonderful tail and back. Fourth: A beauty, blocky type and all we could desire in color. Fifth: Grand in every way, but not as fully finished. Just give him a chance.

Pullets—First: A trim wonder. Extra shape and grand condition. Fine head and comb. Chalk white, red eyes, and rich yellow legs. Second: Wyandotte every inch of her. We looked at her long to pick faults and then gave it up. Third: A very good type, excellently shown; grand comb, eye, etc. Fourth: Another hummer in type, with all in comb as well as in shape of breast and back we could ask for. Fifth: A very fine, clean cut Wyandotte. No. 732 one of the best we have ever seen. We were told by Mr. Duston she would not stand up at judging time, but later came into condition and showed her rare qualities to good advantage.

Black Wyandottes.

Two real good cocks and five hens were shown. Type was very strong here, and while the classes were rather small the competition was close, and we owe congratulations to the judge.

Cockerels—First: A good all around bird. Second: Close up, not as good comb. Third: Fails some in back and breast. Fourth: Not quite as good color, and up on legs.

Pullets—First: The star of the class. Second: Very fine

color, loses on comb. Third: Just a little past her best condition. Fourth: Good shape, but not as good in color. Fifth: Evidently loses on shape.

Partridge Wyandottes.

Cock—First: A perfect gem. He surely has it over the whole class. Second: Fails some in comb, but is grand in markings. Third: A beauty shown out of condition. Fourth: Not as good in comb, or in proper show condition. Fifth: Fine in shape, just a little light in color.

Hens—First: The best all around bird. Typical shape and elegantly marked. Second: Very good back, fails a trifle only. Third: Grand shape, not as well laced. Fourth: Not as good type. Fifth: Fails some on color.

Cockerels—First: Excellent type and color. Well finished, grand head points. Second: Some better in comb, but not as good type. Third: Another real good one. Fails some in tail. Fourth: Rather poor comb. Fifth: A good comb, but narrow in tail.

Pullets—First: Very fine in markings and in shape. Just a shade light in color. Second: Not as good in markings or color. Third: Grand in all except head points. Fourth: Good color, poor comb. Fifth: Fails in neck shape particularly.

Buff Wyandottes.

Class of fine quality, but rather small for this grand variety. We want to see more of these at the next show, for this will never do. The three cocks shown were very nice in color and type, as were also the four hens, eleven cockerels and nine pullets completed the class excepting two pens.

Cockerels—First and second: Were grand, even colored birds, with nice, clean, sharp head points. Type good and finished. Third: Close up, very clean and sound color. Fourth and fifth of good character, as well as of all show points.

**WHITE PLYMOUTH ROCK.**

First prize cockerel at the late Chicago Show. Bred, owned and exhibited by H. W. Halbach, Box A, Waterford, Wis.

Pullets—First: Nice color, grand type; a handsome bird. Second and third shown very well. Fourth: A hot one. She will make a grand hen. Fifth: Not at her best as yet. We like her very much, being a most promising bird.

Columbia Wyandottes.

Cock—First: Typical, fine and strong back and breast,

excellent comb, and striped hackle. Full, sound tail; a grand type and most valuable bird. Second: Comb larger, very clean hackle, but not full. Third: Comb too large, and hackle rather light. Tail extra good, and grand formed breast. Fourth: A pretty and good bird. Fifth: Grand head, unfinished tail.

Hens—First: Good type and well marked. Second: Look very good to us, no doubt close up to first. Third: Not shown at her best. Fourth: Notes are missing on this hen. Fifth: Nice type, and well striped.

Cockerels—First: Looked like a good winner to us. Second: Another good one, and Gene must have had his hands full in this class. Third: Good type and should make a grand breeder. Fourth: Showed up well, a nice Wyandotte. Fifth: We like this fellow, good type, etc.

Pullets—First: Very nice neck and tail. Good shape. Second: Another close up, good breast and tail. Third: Well done. Fourth: We stood this one up and found excellent shape. She handles grandly. Fifth: A very clean one and typical. No. 907, grand in shape, good neck and grand tail.

Pens—First: The best pen we have seen to date. Male a choice Wyandotte in every way, comb good, hackle and tail

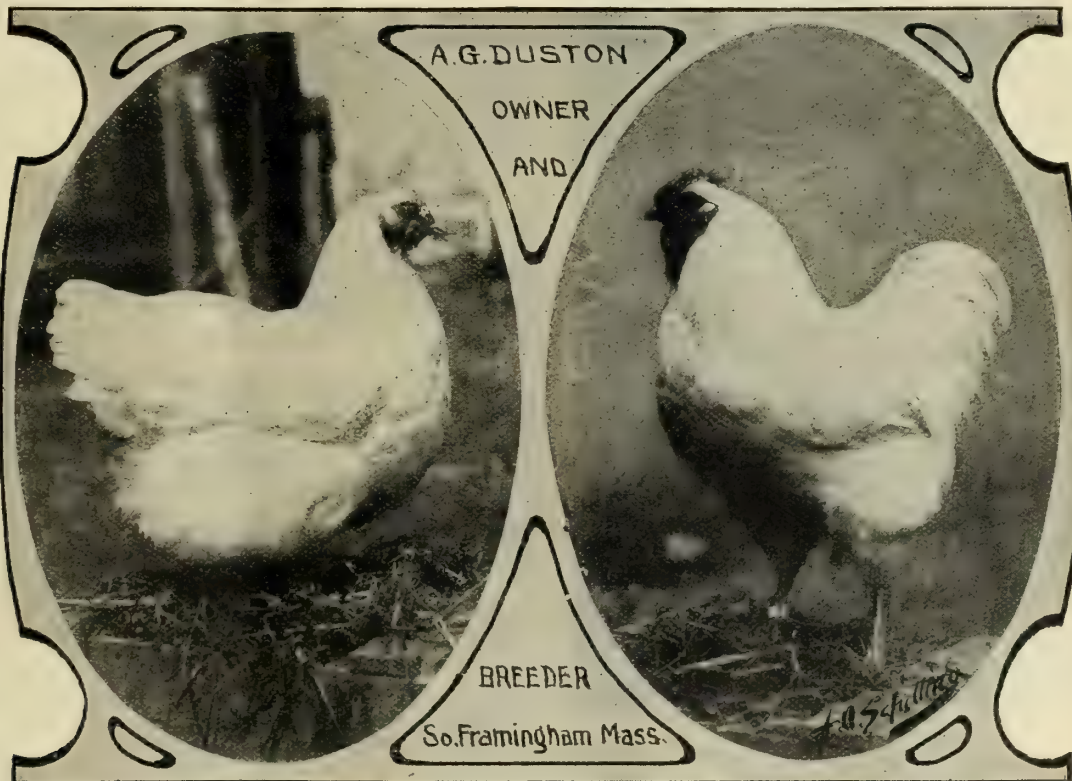

fine color, and grand tail; lacks some in shape. Third: Over shown, lacks in condition of tail, and has three-point comb. Fourth: Weak in hackle, good head and type. Fifth: Not shown in condition in hackle or tail. Extra red color.

Hens—Good average class. First: Fair in shape, passed her best condition. Second: Laying and gone by. Best showing for good shape. Third: Very good type, failed some in breast.

Cockerels—First: Heavy comb, but otherwise, and in shape and color extra good. Second: Good color and type; close up. Third: Fine rich colored bird; lacks in shape, and has large comb. Fourth: Comb off. Tail rather high; good color. Fifth: Light in breast, tail not full.

Pullets—First: A wonder in shape and standard markings. Good head. Second: Fails in head and wing markings. Third: Splendid color, lacks in shape, weak eye. Fourth: Good shape and color, but rather immature. Fifth: A dream in color, but too young.

Pens—First: Very good, evenly matched in shape, and splendid color, good heads, strong eyes. Second: Close up, rich color, a very choice pen. Third: Another very close up, think they had passed their best. Fourth: A good even

fine, arch of neck great. Females were well matched in size and shape, and extra clean; grand necks and tails. Second: Another grand pen, not as evenly matched. Third: Good, in fact real good. Type very conspicuous. Fourth: Think some of this pen has gone by, apparently not in as good condition. Fifth: They would win at Link, and did well here. The veteran should mate again.

Buckeyes.

There were two cocks, two hens, four cockerels and four pullets shown by two exhibitors. Quality was as good as can be expected.

American Dominiques.

There were four each of cocks, hens, cockerels and five pullets shown. The quality was real good, as we had occasion to handle several. The breeders are now hard at work on a new standard, and it is to be hoped with it a new interest will be created in this most deserving variety.

Anconas.

Brought out 16 entries. They were a real good lot.

Single Comb Rhode Island Reds.

Cock—First: Splendid type, trifle contrast in hackle and saddle. Fine comb and head points. Also won special for best breeding male (R. I. Reds) in show. Second: Extra

pen of high quality. We liked two females in this pen extra well. Fifth: Not as well matched or marked, but a good pen.

Rose Comb Rhode Island Reds.

Pens—First: A grand colored pen, nicely marked and good average type. Second: Extra in shape and close up in color and markings. Third: This pen looked good to us in both shape and color. Fourth: A good clean pen, fails in evenness of matching. Fifth: A real good quality pen.

Gray Dorkings.

Shown well, quality extra good. We were pleased to note a good entry here and hope they may increase. This is truly a practical fowl, and should have many admirers.

White and Colored Dorkings

were very small classes. The few shown were good.

S. C. Buff Orpingtons.

We found a great deal of feeling displayed by the exhibitors in this class, some with and some without apparent cause. This was an exceptionally strong class. Never before were such birds shown in such numbers. While the winners were all good birds, we noted several of the most rare quality that were unmentioned. In cocks we call par-

ticular attention to No. 1,169. A typical bird, simply exquisite in form, stands right and of one even soft color from tip to tip. Extra fine shaped comb. Good eye, grand legs set right, finished and sound tail, etc.

Hens—No. 1,117, a beauty in form and evenness of color. No. 1,189, the best Buff Orpington female we have ever seen. We understand she was disqualified for ryetail without being taken out and examined. We had her out at two different times and let her walk around on the floor and could not detect the slightest cause for disqualifying. Hens Nos. 1,186 and 1,194 were also grand specimens of extra quality.

Cockerels—First: A real good hot Orpington, but not shown at his best, unfinished in tail and back, fair head. Second: A perfect ideal in shape and color, with extra fine head points. Shape and finish of tail extra. Third: Rather leggy and fails in breast shape. Good color, very poor comb. Fourth: Not fully finished in tail, but of grand form and typical in every line, beautiful comb, strong eye, and the best buff color in the show.

Pullets—Thirty in the class. First: The winners here were

LUCILLE, SCORE 96.

Harry M. Lamon's great White Plymouth Rock hen "Lucille," said by prominent judges to be the best White Rock hen alive. Value \$6,000. The above cut is from an actual photograph that has not been retouched, showing "Lucille" just as she is on our farm. Owned by Harry M. Lamon, Watertown, N. Y.

extra quality birds, besides we wish to mention Nos. 1,231, 1,237, 1,244, 1,247, 1,250 and 1,254.

Pens were a grand lot, well shown. Nos. 2,647 and 2,650 were extra well matched, of grand type and finish.

R. C. Black Orpingtons.

Cocks—First: A beautiful specimen of type and color, grand finish. Second and third also extra specimens.

Hens—First: Very fine shape, color sound. Second: Another good one, close up. Third and fourth very good ones and finely shown.

Cockerels—But two shown and both of the kind to challenge competition.

Pullets—But three shown, very good specimens.

R. C. Buff Orpingtons.

Cocks—First: A very fine fellow, shown at his best condition. Second: Very similar to first. Third: Very close up, though color not as sound. Fourth and fifth and No. 1,276 were choice birds. Competition in all classes of buffs very keen.

Hens: First: A real beauty, all we desire in form, color and condition. Second: Very fine, not at her best. Third: A good one well finished.

Cockerels—First: A very choice bird and well placed. Second: Good in shape and color. Third: Will make a hot one soon. We liked his promise. Fourth: This one looked good to us, but did not handle him. Fifth: Close up in all ways.

Pullets—First: Very fine indeed. Second: Good, grand form and color. Third: Good head points and well finished. Fourth: Extra form, good color and head. Fifth: A trim one, not shown at her best. Nos. 1,337, 1,339, 1,343 and 1,344 very fine colored and shaped birds.

Pens—First: A very fine pen. Size, shape and color well shown. Second: Very close up. Four beautiful females in here. Third and fourth very good. Exceptional males in them. Fifth: Grand, well mated pen. A superb headed male pen.

S. C. W. Orpingtons.

Cocks—A hot class of choicest quality. First: A good type, evidently very white, good head. Second: Grand form, nice head, good legs, well set. Third: Close up in all points. Fourth: A very good one, grand form. Fifth: We liked this fellow in color; he also stood well.

Hens—First: Very fine and a good winner. Second: Close up, a splendid hen. Third: Good in type. Fourth: Grand in form and color, good head. Fifth: Another real hot one.

Cockerels—A class of very even quality. First: Good form and clean color, finely shown. Second: Close up in every point. Third: A fine appearing bird of extra quality. Fourth: We thought extra well of his form. Chalk white. Fifth: Another good one, grand head.

Pullets—First: A bird of rare quality in form and perfectly conditioned. Second: Very close in every way. Third: Another good one, fine type. Fourth and fifth: Two well conditioned birds, finish, form of body extra.

Pens—First: Grandly mated and the best of condition. Second: A beauty pen of fine form, the male extra. Third, fourth and fifth all of good quality and well shown.

Diamond Jubilee Orpingtons.

Eleven specimens shown. Well marked and of good uniform shape.

S. C. Brown Leghorns.

Not as large an entry as we hoped to see at New York, the quality being very good. First and second cock birds ideals of the class, grandly marked, of exquisite color, grand form and beautiful head points.

First cockerel a choice specimen in form and color, finely marked. Eight-point comb and some red in ear lobe. Second: Another ideal specimen with grand even colors and markings, just about a perfect shaped comb with pure white lobes.

First prize pullet—A beauty. Extra in back and breast color, good size and head points.

First and second hens—Grand size specimens and all we could wish for in color.

S. C. W. Leghorns.

The best class of quality Leghorns we have ever seen when we consider type, condition and size.

Cocks—First: A stunner. Ideal head, great size. Tail fine and carried perfectly, grand breast and body shape. Second: Very close up. Ideal form, strong legs and eyes. Third: Another beauty, very similar to above. Fourth: Good head and in shape and size very similar to above. Fifth: It is an honor to receive a mention of any kind in this class. This fifth bird had all the qualities of a winner in 99 out of 100 shows.

Hens—First: Fine shape, chalk white, fine grown legs and beak. Strong red eyes, an easy and most deserving winner. Second: Real hot goods with notable tail, fine head, etc. Third: An old campaigner and winner of the blue for years. Hard to beat at any age in any class. Probably one of the most valuable Leghorns ever bred. Fifth: Well placed and a real good hen.

Cockerels—First: A perfect Apollo condition. Extraordinary carriage of body and tail most pleasing. Second: Close up, of fine size and grand head points. Third: Very warm stuff, beautiful breast and body. Ideal head. Fourth: Very fine, condition grand. Fifth: A beauty in form and condition. Full, well rounded chest, magnificent back and well carried tail.

Pullets—First: The best headed female we have ever seen, quality all around of the very highest, a type we may safely follow. Second: Nearly equal to the first in head and all qualities; condition perfect. Third: Extra shape and well carried tail, snow white and good head points. Fourth: Whiteness of plumage with rich yellow legs and red eyes are a most notable characteristic in all these winners. Fifth: A

simply grand specimen, full of the best quality, if one quality predominates over the other we should have to select it from type, size and condition; all were extra fine.

Pens—First: Finely mated and extra well matched. Size, shape and condition equal. Male typical, with an extra choice Leghorn head. Second: Well matched and a real good quality pen. Third: Close up, white and grand in form. Fourth: A beautiful male in here. Well rounded breast and finely pointed. Fifth: A well balanced pen of choice quality, grand headed male and beautiful females.

S. C. Br. Leghorn Pens.

First: The male a superb bird in richness of color and markings. Typical and grand head points. The four females of even size and well matched. Second: A real good even quality pen. Third: Close up to second. Fourth: Another of all good and well matched birds. Fifth: Very good all through.

Light Brahmas.

One of the best quality classes seen for some years, shape being the prominent feature. The winners were well placed and there was quality enough for several more ribbons in each class. The first prize pen, in particular, was declared to be one of the best ever seen in the garden.

Dark Brahmas.

Rather small entry, quality good. We look for a larger class next year.

There were but 4 Buff Cochins, 8 Partridge Cochins and 11 White Cochins shown.

Black Langshans.

A very nice entry of choice specimens. This old favorite is holding well.

S. C. Duckwing Leghorns.

Quite a class for this variety.

R. C. W. Leghorns.

Thirteen birds shown, of good type and very good heads. Condition prevailed here.

S. C. Buff Leghorns.

A very large and strong class of superb quality. Evenness of color a prominent feature here.

Cocks—First: A grand clean bird of shape and head points. Second: Another good one, great eyes and head. Third: Close up, good type. Fourth: Very clean and good shade. Fifth: Good color, needs more time.

Hens—First: Very clean and stands well. Second: Well placed, a choice bird. Third: Good, fine head. Fourth: Grand type. Fifth: In color grand, just a mite past.

Cockerels—First: A choice specimen in every way, ideal head. Second: Good one of rare quality. Third: Looked extra to us in every way. Fourth: Nice, rich color and good form. Fifth: Typical and good head.

Pullets—First: Very clean buff, a handsome specimen. Second: Close up in every quality. Third: Clean and good legs. Fourth: A beauty, fine head. Fifth: Good type and size.

Pens—Seven grand pens were shown. Type and color were very evident here. Males with superb head points, and of bright, clean color.

S. C. and R. C. Black Minorcas.

A difference of opinion here. Were promised special notes on this class, but they have failed to arrive. The classes were all well filled with very choice specimens. As we saw them the quality was simply grand. We have notes on most of the class, but as they are not complete we refrain from further mention at this time.

White Minorcas were represented by about 20 birds. Minorca size as well as type were evident here; condition fair.

Blue Andalusians.

All classes well filled and of a quality rarely seen nowadays. We can see a good future for these, as they well deserve it.

All kinds of Polish were shown in fair numbers. The quarantine laws at this time kept out all Canadian birds, and they were sadly missed. Those shown were real good, but we like to see more of this beauty breed.

The same can be said of the Hamburg classes. While competition was stronger here, those from Canada were sadly missed.

Houdans.

A good big entry, larger than we have seen for some time. Quality very good.

Cocks—First: A superb bird in quality, not in the best of condition. Second: Looked extra good to us. Third, fourth and fifth all close up, of excellent type.

Hens—First, second and third were very fine in color and type; balance of winners good. No. 1,839, grand crest and beard, finely marked.

Cockerels—First and second: Grand birds, well shown. Third: Looked fine to us.

Pullets—First: A beauty. Second: Real nice and as good as can be. Third and fourth: Very even and good crests. Fifth: Another good one in every way.

The display of game birds was very complete, all varieties and all classes well filled, close feathering and station the prominent features. The games were a show in themselves.

Bantams, both game and ornamental, were shown in good numbers.

A feature of the show was the display of turkeys, ducks and geese. Beautiful specimens of all varieties were here, the classes were strong and honors eagerly looked for.

The display of pigeons and pet stock was just about the same in number as in past years, and delighted as usual. One display of 15 or more varieties of ornamental ducks shown in their natural conditions and likes.

For list of awards see page 161

AN AMATEUR'S EXPERIENCE.

Written for American Poultry Journal by B. E. Hutchinson, Brookland, D. C.

In attempting to write anything of interest to the many eager readers of this Journal, I will address my remarks especially to the beginners in this, one of the most interesting and profitable occupations.

It will be my endeavor to present a few plain facts to a class of readers, who, as a rule, do not care to be overburdened with scientific data or unmanageable theories.

The successful breeding and rearing of standard-bred poultry by those wholly inexperienced and ignorant of the many minute details, is about as hard to accomplish as the task of steering a vessel into port by a land lubber; in each case, they quickly strike a rock. The sailor becomes proficient by roughing it, and getting experience first hand, and the minor part of it by reading and studying navigation. So in poultry breeding; active experience and imitation of our superiors, in that field, should be given the precedence, and as a finishing off process, the reading of all the good poultry journals, experimental station bulletins, getting the free bulletins of our great agricultural department, attending all poultry shows, and rubbing elbows with big as well as small breeders.

If my fellow amateurs will pardon a few personal references, I may thereby bring many things home to them, and if anything I have profited by should help them, I shall feel amply repaid for my rambling remarks.

Seven years ago, I, like many farm-raised boys, who have sought city employment, and later found the confines of the city streets too narrow, moved to the suburbs, where there was the health-giving air, sunlight and outdoor delights, not to speak of the advantages of home flower and vegetable gardens, fine healthy poultry and fresh eggs. The latter, I must confess, are scarce and high in most eastern cities.

Like all men who have been accustomed, while on the farm, to take more or less interest in the raising of all kinds of poultry, I thought I knew a great deal about the chicken business, and all I would have to do would be to get the hens, etc., and begin getting eggs and take in the cash. I probably voice the sentiments of the majority of those who have done likewise, and who will be honest and candid in saying that we soon had our eyes opened to the need of a thorough preparation and experience, just as one would need to start in a business or profession. The need is more pressing to those who undertake poultry on small acreage or lots, than on a large farm where the free range and nature's bounteous storehouse overbalances, to a large degree, many other deficiencies and improper handling or breeding.

I have observed there were at least five ways in which the average amateur was likely to go wrong:

1. Poorly arranged and insanitary poultry houses of old and young.
2. Improper feeding.
3. Insufficient or no care in mating.
4. Lack of proper precautions to eliminate disease, vermin, etc.
5. Failure to cull out the flock properly and marketing to advantage.

It will be useless and egotistical to undertake in this limited space to give a satisfactory rule or remedy for each of

the foregoing; it is only necessary to refer the reader to the many ably-written articles on all such subjects constantly occurring in these columns. I do not hesitate to give credit to many contributors to this department of the past two years for giving in a condensed and practical form, enough of the substantial advice and practical suggestions the beginner would need for some time. But the amateur must not read and follow them in a half-hearted fashion; he must enter into it with a zest and enthusiasm, such as is expected in any successful avocation. Keep the old motto, "Where there's a will there's a way," before you. Do not become discouraged at failure the first or second year's trial. Try again! The probabilities are you will succeed. If you are the failure, no one need tell you by that time.

Do not be deluded by the idea that you must, at the start, outlay a large sum in the purchase of the many and varied patented devices so profusely illustrated and advertised. Most of them have more or less merit which appeals to the varying fancies of those whose business justifies their purchase, or to those who have not the spare time to make for themselves. Many things useful and practical, for daily use, can be made at your own home from materials generally lying around, and from which, by the exercise of a little skill and ingenuity, you can work wonders. The accessories thus made will save the novice many a hard-earned dollar which, if wisely expended in the purchase of finer stock each year, will go farther toward putting you on the higher rungs of the ladder of success in your chosen fancy or avocation. As an example of such saving, make your own dry feed and grain hoppers for your stock, old and young. One for older fowls can be made of a properly-shaped pine box costing five or ten cents, fitted with lid on top, and slatted openings at one side from which to eat. For young chickens, take a clean tin can and remove entire upper end and the small, circular, soldered plate in the center at bottom of can. (This latter to be used for the top of the hopper through which wheat and small grain are poured.) Begin at circumference of the open end (to be used as bottom of hopper), and cut out pieces of the tin one inch wide and running up into can two inches. Do this at intervals of two or three inches, then bend upward, at right angles to the can, each of the remaining pieces of tin for a distance of one inch from bottom of each piece. This will give you flanges to be used in nailing through the feed pan to a two-inch block of wood beneath. There will be an aperture at each place cut out of one inch square from which the grain or feed drops out into the feeding pan. Provide a circular food pan, which should be shallow, and of such diameter as not to allow chicks to get into or stand on the food dropping from hopper into pan. The block of wood below is to nail through to form a substantial base to prevent upsetting.

I may add that for young chicks, it is my belief that a heavy percentage of sickness, bowel disorders and deaths are caused by the unwise use of wet mashers and sloppy foods. Use the dry feeds, prepared small grains, plenty of wheat and feed or let run on green stuff, such as oats, wheat, clover or other tame grasses, and by keeping small grit, charcoal, etc., before them you will eliminate practically all the ailments and summer fatalities. Free range and grasses will reduce the food bill one-half or more, give perfect and early development and a finer, brighter plumage.

The foregoing feeding rule applies even more forceably to breeding stock, wet foods being conducive to sluggishness, indigestion and the resultant weakening of the reproductive organs; hence unfertile eggs and low vitality of what chickens are hatched.

Always remember, beginner, that it is just as essential for the fowl, old and young, to have frequent and regular exercise and a varied list of foods, in order to promote proper development and later to fill the egg basket, as it is for your child to have the proper nourishing foods and regular and frequent exercise in the open air to make him a bright and intelligent man at maturity.

In mating his breeding pens, the amateur must proceed with caution, remembering that like produces like. The generally-accepted opinion is that the dam governs to a certain degree the size and shape, while the sire does in the markings, but in great extremes the offspring are quite often a medium between the two. If inexperienced, do not cross strains, as the offspring will often be deficient in the proper coloring. The weak points in the female should be counterbalanced by similarly located strong points in the male, and vice versa. Use no immature stock, and do not in-breed too closely, at least not until you master such a science as line breeding.

As to disease, lice and mites, eternal vigilance should be the watchword, and the ounce of prevention, in this case, is worth many pounds of cure. Many diseases, as roup, chicken-pox, gapes and diarrhoea, are brought on, made more con-

tagious and fatal by overcrowding in damp, poorly-lighted and ventilated quarters.

Often mild outbreaks of such diseases are checked immediately by quickly isolating ailing fowls and thoroughly disinfecting houses and runs, feed and drinking vessels with a ten per cent solution of crude carbolic acid used in a fine spray pump or watering pot, fitted with a fine spraying top. A small can, ordinarily used as a bicycle oiler, is a good thing to use when such diseases as roup or canker require a spray or wash application to the mouth or inner cavities of the nostrils. A moderately warm, dry room and the use of one drop of pure carbolic acid to each such small squirt can of boiled water injected in each nostril, in small quantities twice daily, will, if taken in time, cure roup in its early stages in a very brief time.

When using hens for setting, begin to make sure of her freedom from lice before setting, and keep up the use of proven lice powders both on hen and on the nest, and after hatching up to the time of separation from young. For head lice on chicks, olive oil and a ten per cent solution of kerosene, well mixed, is good, as it is also for persistent attacks of vermin on older fowls.

In the culling out process of your flock in late summer or early fall, do not be afraid to market all specimens below your standard of perfection. Then your flocks will be more even in size and appearance, and show off to advantage to any prospective customers. In selling breeders or eggs, remember the old adage, "Honesty," etc.

If you have a bird just as good in every respect as some other established breeder of your line, sell it for face value; do not get wise in your own conceit and endeavor to obtain an exorbitant price and ruin all further prospects of profitable sales, and if you have eggs worth \$2 per setting, do not try to "sting" someone in a distant state, else "cruel fate" will decree to you in a brief time that you be quickly counted "down and out," after which it will be too late to mend.

In buying do not expect a show bird for two or three dollars, or eggs to produce them at incubator prices.

By the use of a liberal allowance of sound, practical reason, and a generous application of the Golden Rule to all, there is no reason why there may not be an ever-increasing army of successful amateur poultrymen scattered over our broad and beautiful land.

THE MAN AT THE HELM.

Chris H. was a big, strong, kindly young fellow who had spent his twenty-two years on a farm in the central portion of Long Island. He had acted in the capacity of first deck-hand to his father, who was captain of a fertile sixty-acre pickle factory farm.

Skilled in the handling of horses, and strong with the heavy field work, this young man, though accustomed to farming in practically all its branches, knew absolutely nothing about the merely essential facts of poultry care.

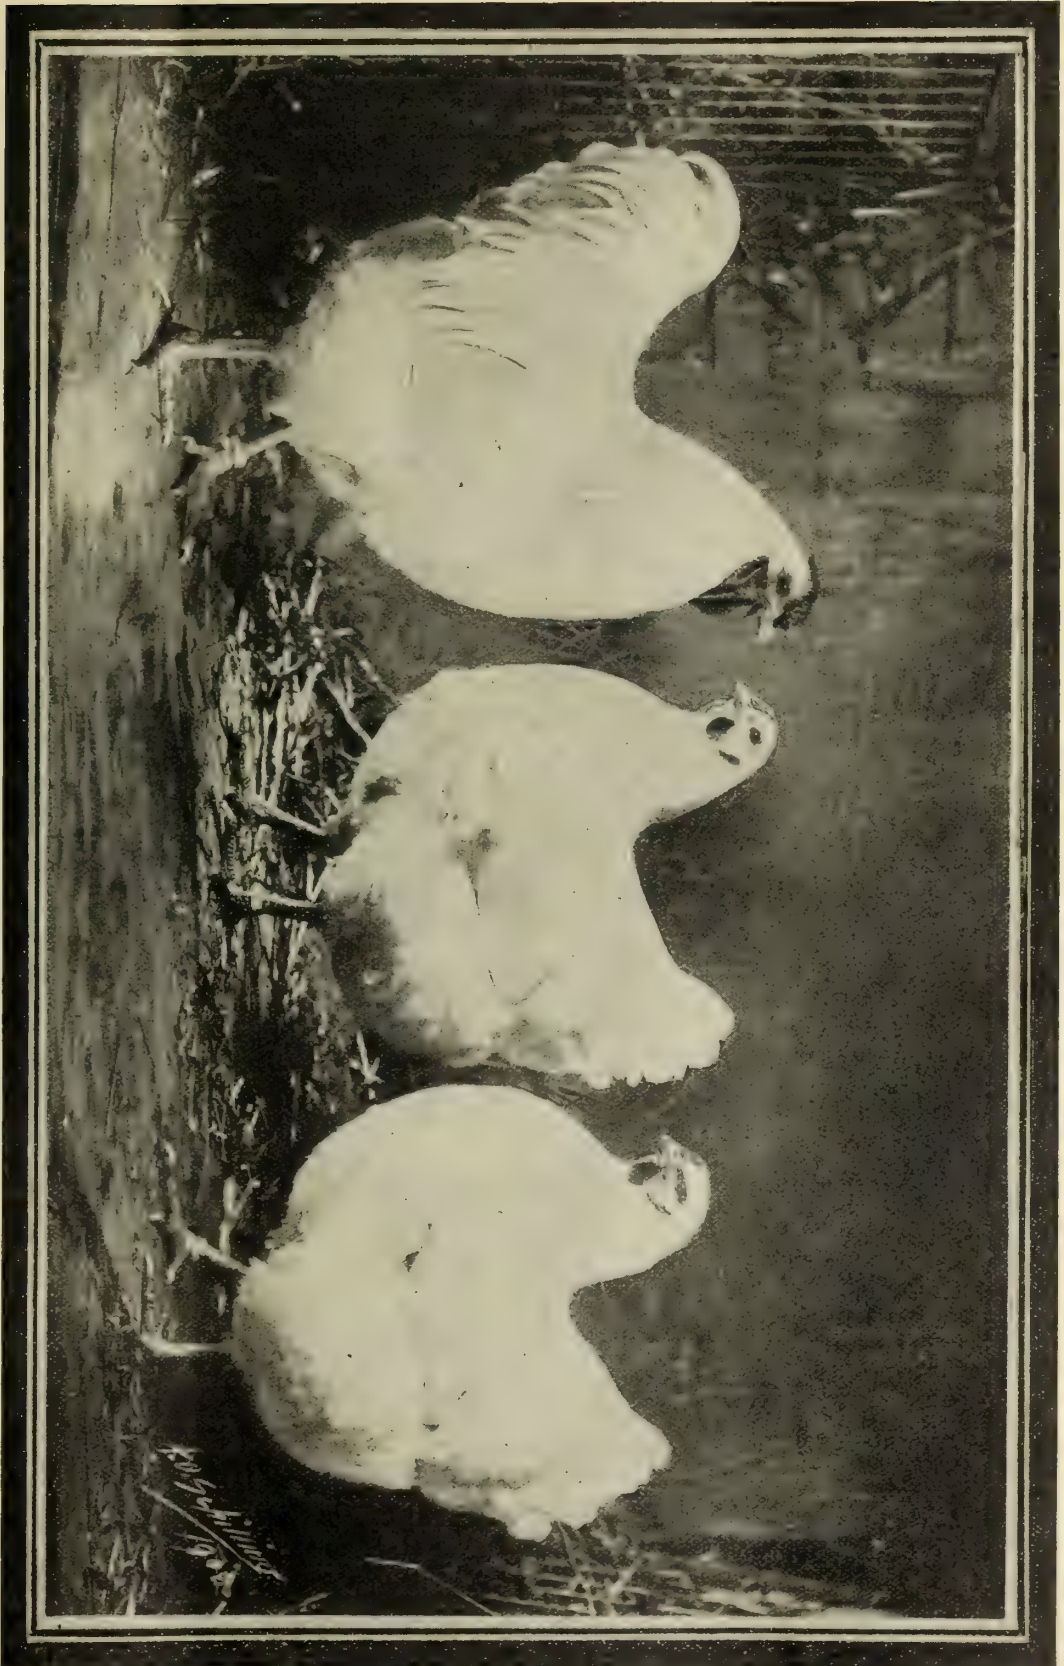

Any farm, large or small, would look like a graveyard in my opinion unless inhabited by chickens and other barnyard fixtures, but on the H. farm fowls were regarded with apathy, if they were regarded at all, and Chris in addition was very much impressed with the apparent nuisance other people's chickens were, running all over their places. They raised a few head, however, probably for pictorial effect.

It was about this time that I happened along to spend a few weeks on the farm, and had the experience with their birds as related to you in the American Poultry Journal a short time ago. Chris became interested in my endeavors, it seems, and after I had left he tried to introduce some system and order into what I suppose had been a chaotic carnival of chicken bliss conducted by a recklessly generous tenderfoot.

My successor's first step, I learned, was to weed out the grandmas of the flock, and these were many. This made room for the baby chicks that had been under his mother's care all summer, a chance to get around and get acquainted.

For the time he fed the chickens in that instinctive way that the natural man has and which might be called feeding by feeling. I believe too many receipts and formulas are ruining this inborn sympathy and judgment and reducing this most delicate matter to the condition of a tight shoe on a man's foot—it protects and guards, but it carries with it its own ills, pains and curses.

There was a farm of about twenty acres a short distance from the scene of this action, which was owned by an individual who found it more profitable to flag the nearby town's main street railway crossing than work the soil, and he rented his place to various alleged agriculturists until a few summers ago, when the elder Mr. H., who had been

ROSE COMB WHITE ORPINGTONS.
First cockerel, first and second pullet, at Indianapolis, Ind., 1908. Bred, owned and exhibited by Charles V. Keeler, Winamac, Ind.

badly bitten by a real estate bug, decided to buy the land with the object of some day cutting it up into city lots or making it into a suburban park. Chris also decided to do something, and as this farm looked good to him for a poultry plant, he arranged to rent it from his father for a time, and as the place had several fair buildings on it, he expected to and did succeed in raising paying flocks.

Business management on the farm is as important as the knowledge of stock, fowls or crop raising, and I have found that this young man has the acumen of many men double his age. He made a study of his birds, his sources of food supplies and his market. He found, for instance, that in the spring he could hatch and raise chicks and have more to show for it than if he had sold the eggs at the prevailing ruinous prices.

Now that he was on his own place, so to speak, he could follow out his ideas, and he had the nerve to do it, too, without conflicting with his father's settled opinions, and he conceived the idea of devoting what land and time he could to the raising of those foods which were the most expensive at the feed stores, instead of growing what everyone else did and which could be obtained cheaply enough in the neighborhood.

In the summer he prepared for the winter, laying in supplies of food, green and grain, scratching material and dust, leaves and bedding. In the winter he prepared for summer by getting his fowls in a condition for spring maternal duties.

He did not try, as many beginners do, to carry more stock than he could house well, and he did not trifle with makeshift appliances.

Of course he now has his own method of feeding, breeding and managing, based on his experiences; and while you, reader, perhaps would profit by knowing it, still I think that the lesson of business management is just as important.

The "American hen" is a worker, and a flock of them can be fed this way or that way and still produce the goods, much the same as so many men in a factory; but it takes the man at the managing end to direct, conserve, adjust and gather the stray ends and turn them to account—that makes the difference between success and wasted hen energy.

Henry G. Hinchcliffe.

TRUE LANGSHAN SHAPE.

Written for A. P. J. by Horace R. Brown, President American Langshan Club.

It seems to be the fear of breeders of fancy poultry that it would be fatal to their favorite breed to discuss its weak points as well as its strong ones, and especially its universal weaknesses, that is its tendency to revert in some certain particular or particulars, to an undesirable type. I do not pretend to know what this weakness is in any great number of breeds, but I do know that it exists in many of the most popular breeds, and I have a very strong suspicion that the same thing is true of all, so I do not feel that it would be any disgrace for the breeders to discuss and try to remedy the defects of their breed.

When I hear a number of exhibitors talking of the correct time before a show to pull out the tail feathers of cock-birds, and the use of certain acids for certain color defects, etc., I cannot help but think they have trouble of their own—a tendency, perhaps, of the breed to revert to certain types very undesirable.

I do not believe in radical matings—that is, extremes. To get permanent results requires generations of proper breeding, remedying defects by easy stages rather than by mating to a radical extreme.

It is my pleasure to breed the Black Langshans, an old breed, which probably is as distinctive in type as any breed now in public favor.

A great many of our breeders, however, are trying to establish a strain of their own. This is all right if they are trying to perfect the breed according to the standard of perfection, which certainly describes a very beautiful bird as well as a practical or utility one. The real trouble, however, is that most of them have in mind some one or two points for which they sacrifice almost everything else. One will insist on color, another on head points, another on back shape, another on tail shape, etc.

A true Langshan is a tall bird, but not a stilty one. It should have a large, full breast which should not be carried too high, which gives the bird a game appearance, and which is a common fault. The back should rise gradually from

the center and carry up on the tail without a sharp break, and to get this result it is imperative that the body be carried at right angles with a perpendicular line from the feet to the breast, that is the breast should not be carried too high, as above suggested. The back should be short and broad, for a good breeding male, the broader the better. The head should be carried well up with a well-arched neck. The tail should be large and carried well up. Not squirrel-tailed, however, and here is where many fail. Their birds have little pinched tails that remind one of a goat. The comb should be of medium size and the blade carried well down at the back and not turned up as though it were trying to escape being in company with the bird that owns it,—not small enough to look pinched and out of proportion to the bird, nor large enough to be "beefy." And above all things, the comb should be straight and firm on the head.

The legs should be straight, firm, and well apart. The Langshan is a fine-boned bird for its size, and it should not have beefy toes, as this detracts seriously from its trim appearance, but do not go to the extreme, as the Langshan is a large bird, and I do not consider good-sized shank bones any defect if the toes are trim and neat.

If you have a bird that closely approaches the standard for shape, do not be discouraged if it does not always win.

BLACK LANGSHAN COCKEREL

I do not think, as a rule, there is any department of fancy poultry breeding when a breeder receives less credit for his success than in trying to breed true to standard shape. And without intending to take a slap at the judges, as we need them, and, as a rule, they do the best they can, I think more judges fail in the application of the standard in passing on the shape of the bird than in anything else.

A majority of the Plymouth Rock and Wyandotte fanciers have a fixed standard of shape for all birds, and it is needless to say that a Langshan better swallow his pride and drop his tail when they approach. The same would be true if some of our Plymouth Rock or Wyandotte brethren were to show under some of our Langshan fanciers. We, however, have to show under such judges even in some of our largest shows, and over our protest.

But do not abandon shape, for if I do not mistake the signs of the present, there will be a change, and that soon, and then shape will count as well as color.

Also keep up the size of your birds, as no one wants a five or six-pound Langshan cock-bird.

Join a Langshan Club and do something for your breed, and incidentally for yourself.

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communications about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded to J. H. Van Meter, Sewell, N. J., and the second prize to Charles R. Gumm, Salinas, N. M.

MASTER THE CHICKEN FEVER.

The chicken fever is contagious, if you happen to have a neighbor or two who keep a pure-bred flock of fowls, all of one color, one size, and making them pay their feed bills and a nice profit besides. Well, it's enough to give anybody a desire to raise poultry. Well, I'm one that caught the fever; got it last winter, a pretty good time to get it anyhow. It will give you time to subscribe for one or two poultry journals and send for some incubator catalogues before spring, a good time to start if you are going to start with eggs. The weather being warmer, the young chickens will do better, and then it's nature-time for reproduction anyhow.

Well, the poultry journals and incubator catalogues gave me the fever worse than ever, as they will with everyone that has not had any experience with poultry. For you will read in the journals where poultrymen would get from 200 to 225 eggs from a hen in a year, and get their pullets to lay when they are about five months old, and the testimonials in the catalogues where they would hatch almost every egg. So I could hardly wait till spring came, as I did not have much money to start any other way than with eggs—a good way to start if you haven't got the money to buy a good pen of a pure breed. Well, if you have got a lot of surplus money and have not had much experience with poultry, take my advice and don't go into it head over heels, thinking you can do as well right on the start as men who have raised poultry for years.

Well, this chicken fever makes me think of the bicycle fever I got a few years ago. Almost everybody was enjoying himself riding a wheel. Well, I had to get one, of course, to be along with the rest and be up to date too. So the first thing I did after I got it was to try to do the same as I had seen the rest doing, but I didn't. I was on it, and off of it, under it, and discouraged a good many times before I got master of it. Now I can ride right along and enjoy myself without any trouble. Why? Because I have had experience with it and know all about it.

Well, the chicken business is about the same thing. We can see others doing well with their poultry, so we want to do the same thing. Of course to do it we have to buy some poultry or eggs. Then, we think, as with the bicycle, jump right on and start right off and do the same. But you'll be discouraged a good many times before you master it. Then after you have mastered it things will go along without much trouble.

So don't give up; stick to and win, as I am trying to do.

Well, this is the way I have started. Not having much money to start with, I bought four settings of eggs from a neighbor who had a good breed of Single Comb White Leghorns. The eggs were set under four common hens the first of May.

At the end of three weeks almost every egg hatched.

Well, a pretty good starter. They all lived and grew nicely till about the last of June, when they started to die till I had only thirty left. Well, this was my first fall, but I kept right on taking care of them, and raised the thirty to maturity. Well, I had fourteen cockerels and sixteen pullets, a bunch of beauties. So I sold the cockerels and kept the pullets. Then I went and bought a rooster from another neighbor who had a good breed of Single Comb White Leghorns. I put them all in a nice warm pen with a cement floor. I gave them good feed and a nice lot of dry litter for them to scratch in.

Well, they certainly would enjoy themselves scratching in it after I'd thrown the feed in it for them.

I waited for the eggs, but they didn't come when I ex-

pected them, so I got discouraged again; but I kept right on feeding them and waited. So they are almost eight months old now and only two have started to lay, but that encouraged me a little. So I'm going to be like I was with the bicycle—stick to it and master it if I can.

Sewell, N. J.

J. H. Van Meter.

A POULTRY FARM IN NEW MEXICO.

I am a reader, and have been for the last eight years, of at least seven of the leading poultry journals of the country, and I have yet to see my first article on poultry in New Mexico in any of them. New Mexico! Who ever heard of fancy poultry in New Mexico? All they raise is coyotes, jack-rabbits and desperadoes; no fancy chickens out there in that wild and forgotten territory. Yes, there are; but why don't some good poultryman "get wise" and put us on the map? Well, here goes:

I have been raising fancy poultry now at this place for over three years and haven't created any great disturbance or caused any excitement except among the jack-rabbits, as I will explain later.

We have 160 acres of homesteaded land within 300 yards of a fine railroad station. We are breeding Single Comb White Leghorns and White Plymouth Rocks. At present our laying stock numbers a little less than 500 birds. No doubt the reason there are not more poultry farms in New Mexico is because of the fact that it takes "nerve" and "grit" to face the proposition as we find it; however, we find at this place conditions very favorable with the exception of high-priced feed stuff. The climate is such that young chicks can be raised out of doors nearly the year around with a very small per cent of loss and little trouble.

We cannot raise a crop every year unless we have water to irrigate, which depends largely on the amount of snowfall in the mountains. We have not succeeded in the last two years in raising a grain of feed stuff on our place. However, we have raised lots of fine chickens. We pay \$2.25 per hundredweight for wheat, \$2 for Kaffir corn, \$1.85 to \$2 for corn, \$1.90 to \$2.10 for bran and corn chops, and as high as \$3.75 per hundredweight for oats; while, on the other hand, we receive for our products 25 to 30 cents per pound (dead weight) for broilers, 15 to 20 cents per pound (live weight) for hens, and 25 to 65 cents per dozen for our eggs, never less than 25 cents per dozen; but right now the leading groceries of El Paso, Texas, are offering 65 cents per dozen for guaranteed fresh yard eggs in any quantity. It costs us 35 cents per case of thirty dozen to put them into the city.

About one year in four we can raise on our place good crops of Kaffir corn, Milo maize, wheat and oats without irrigation, but we find it cheaper in the end to buy our feeds and devote more of our time to our chickens. Even in good years when crops grow without the supplied moisture, they have to be watched and so protected from the jack-rabbits that it makes the stuff "come high." When we buy our grains we make good use of the jack-rabbits, as they are the very large species, weighing from six to eight pounds each. We go out in the evenings and make sport of killing them with small caliber rifles, then their carcasses are brought in, nicely dressed and fed to our chickens. Every other day five to ten of them are ground up in a bone cutter with just enough corn added to keep the knives clean. These are fed raw, and every other day five to ten of them are boiled to pieces in a large food cooker and the mess thickened with bran and corn chops and fed hot at nights, the raw meat being fed at noon. A variety of good clean grains, the best we can buy, are fed in the mornings, and at night when hot mash is not fed.

Oh, no, there is no danger of running out of jack-rabbits, not for some years to come yet. Why, this county in which we live is thinking of offering a bounty of a few cents each for their scalps, to induce people to kill them. They are so numerous as to destroy whole fields of alfalfa, beans and grains of any kind unless protected with net wire. So as long as the rabbits last we will get eggs in winter, and eggs in winter are cash in hand. These rabbits are secured at a very small cost, and while making a big saving in our feed bills we combine recreation with business.

Our poultry houses are not as elaborate as the majority of those I see pictures of in the poultry journals, although they are built for the purpose of convenience for ourselves and comfort for our flocks. We yard everything, necessarily, for protection from coyotes and wildcats, and then, too, we find it much easier and more profitable to manage large flocks in this manner.

Subscription 50 Cents a Year—5 Cents a Copy of all
Newsdealers. Chicago subscriptions 60 cents (when
delivered by carriers). Foreign subscriptions \$1.00.
Canadian subscriptions \$1.00.

Look at the date upon your wrapper. Many sub-
scribers write to ask when their subscription expires
and many complain because we discontinue sending
the JOURNAL at the expiration of time for which
it is paid. The date when your subscription expires is
found on the wrapper each month.

AMERICAN POULTRY JOURNAL is the oldest poultry
paper in America. It has a national and world-wide
circulation. The best writers on poultry matters con-
tribute to its columns. It receives the patronage and
endorsement of the foremost representative breeders
of standard poultry and manufacturers of poultry
appliances in the country.

Advertising rates are sent upon request.

GUARANTEED SUBSCRIBERS.

With each subscriber to our publication we
positively guarantee, while his subscription
lasts, that no advertisement is allowed in our
columns unless we believe that any subscriber
can safely do business with the advertiser, and
we agree to make good any loss which any such
subscriber may sustain by trusting any such ad-
vertiser who may prove to be a deliberate swin-
dler; but we do not undertake to adjust trifling
differences between subscribers and responsible
advertisers. To take advantage of this guar-
antee, written complaint must be made to the
publisher within two weeks from the date of
any unsatisfactory transaction, with proofs of
the swindle and loss, and within two months
from the date when the advertisement appeared,
and the subscriber must prove that in writing
to the advertiser he said, "I saw your ad-
vertisement in the American Poultry Journal."

H. P. Schwab.

Mr. H. P. Schwab, of Irondequoit,
N. Y., is now eastern representative for
the American Poultry Journal. Mr.
Schwab is probably the widest known
poultryman and judge of the present day,
as it was by his efforts of eleven years
that the American Plymouth Rock Club
became the largest and most influential
specialty club in America. As a poultry
judge he is well known throughout the
country, as he has judged at such shows
as Chicago, Philadelphia, Boston, Detroit
and for several years at the great Mad-
ison Square Garden show. He is also an
extensive breeder of Barred Plymouth
Rocks.

It affords us great pleasure to make
this announcement to our readers and
patrons, as we feel that the eastern field
will be taken care of in a much better
and more thorough manner than we have
been able to do in the past. Mr.
Schwab's report of the Madison Square
Garden show appears in this issue. The
reports of the Boston and Philadelphia
shows will be given in the March num-
ber. In the very near future Mr. Schwab
will make an extended trip all through
the East and will visit the plants that
we have been forced to neglect during
the past year or two. Through the ef-
forts of Mr. Schwab we intend to make

American Poultry Journal of more value
to our eastern advertisers than ever be-
fore.

C. W. Zimmer.

We are pleased to announce to our
readers that we have secured the serv-
ices of C. W. Zimmer, Fort Wayne, Ind.,
who will represent American Poultry
Journal in the Central and Western
states. Mr. Zimmer is an experienced
poultryman and judge, and we consider
ourselves fortunate in securing the serv-
ices of so capable a man to represent us
in the field. Mr. Zimmer has many new
ideas which will be taken advantage of
during the summer months and which will
go far towards improving the American
Poultry Journal next season. He is a
young man, full of ambition, and this,
coupled with the experiences of the pub-
lishers of American Poultry Journal, is
bound to work for the interests of our
readers and advertisers.

Mr. Zimmer is a breeder of S. C. R. I.
Reds, and was recently elected president
of the National S. C. R. I. Red Club.

A Successful Show at Toledo, O.

The Toledo show made its usual ad-
vance in quality and size again this year.
Their extra inducements in the way of
regular premiums, which were better than
Chicago, Detroit and Cleveland, attracted
extra high quality and keen competition.

Anyone who can advertise 1909 Toledo
winnings has the highest guarantee of
superiority. Toledo, with the best lighted
hall in the country, which is located in
Toledo's best section, their own Empire
coops, and six years' experience in con-
ducting shows, promises to become one
of the very best shows for the big and
little exhibitors in the Middle West.

At the New York Show.

Friend Bill:

As I promised, I am now going to tell
you about the New York show. I got
there all right and got back O. K., only
just a little bit the worse for wear, and
as I told you before, I only had one bird
in this year and so my opinion will be
worth something, except in that class
where, of course, my bird ought to have
won, but, you know. Now, I'll begin
with the birds and tell you that there
were some great birds on exhibition, es-
pecially in White Rocks, Barred Rocks,
White Wyandottes, White Leghorns and
Orpingtons. But all that you will see
by the papers, and so I shall only men-
tion them now and again; but what I
am going to tell you about is the gossip
on the floor and who I met. First I met
the one and only H. V., looking just the
same as ever, or as I have known him
for nearly ten years. Has always got a
firm grip on the steering wheel, and if
you treat him right he will always do
the same by you. To be the head of a
great show like the New York, and keep
everything well oiled, it takes a firm hand
and great will power, but under a seem-
ingly rough exterior there is a warm
heart and although it may be in a gruff
way, you get what you ask for if it is
a possible thing, and in a show like this,
where there is limitless possibilities for
graft there is not a man who can say
that H. V. did anything for him through
graft, and I would just like to be pres-
ent when it was offered. No, the manage-
ment of the New York show is above re-

proach. The old man seemed very much
tickled about the banquet, which was a
very successful one, but it should have
been given more publicity, as, until the
night of same, I had not heard of it, and
one of the judges told me he did not
know of it until it was over. As it was
meant as a token of esteem to H. V.
Crawford and Captain Griffing, every
poultryman should have been given a
change to show his esteem for the above
named gentlemen. That's what I think,
Bill; don't you? I always have stood
up for H. V. and, as you don't know him,
I thought I would just give you my opin-
ion of him, and I may say that I have
never had to ask a favor from him. So
it is an unsolicited testimonial and, again,
he only knows me by sight. Then I
came to Captain Griffing. Here is a type
of man we have all read about in our
earliest days. He is a typical old sea
captain, and every time I see him I
always wish I knew him more intimately,
for if I did I should certainly get him
away in some corner and ask him to tell
me some yarns, as the cut of his jib tells
me he must be a pastmaster at this sort
of thing. He is always the same and
always obliging and doing the best he
can for everyone. That really finishes the
officials, as we really only know the two.
Next must come in Barney Mosher. He
is the real superintendent of the show,
and he does it to perfection. When we
lost "Jack," about two years ago, we
thought the show would certainly go to
the dogs, but Barney came and saw and
conquered. He is a very obliging fellow,
and brings his own help with him from
around Johnstown, N. Y., and they are a
nice lot of fellows, especially "Fatty."
They tell me Barney has hit it right up
at Johnstown. There was a split in
the party up there and Barney sided with
the winning side and now is supervisor
and getting lots of plums. Well, he de-
serves them, so I say, Bill, "May his
star always be in the ascendancy."

Now, Bill, I can not go on forever
writing, so I am only going to give you
a general idea of the men I met and I
will take them by breeds. In Barred
Rock alley I met the one and only A. C.
Hawkins looking quite jubilant over
winning the plum; viz., first cockerel.
Hawkins has a queer way of looking at
you. First you think he is smiling, but
after you know him you find out his face
is made that way and he can't help hav-
ing a smile-like countenance. It must
be a great asset in business and it prob-
ably is the reason why A. C. Hawkins
has made so much money out of chickens.
Then there was Charley Welles. He was
tickled all over and showed it. Then,
of course, there was A. C. Smith, just as
ever, going around in his calm way. He
is secretary of the club now, you know,
and so he must be all things to all mem-
bers. Then there was C. H. Latham, the
hard worker, but always with his smiles.
Of course Schwab was on hand as judge
and I am told he is eastern representa-
tive of the American Poultry Journal
now, so if you want Rock news you must
get the American Poultry Journal. Then
there was the pine top man, who, I sup-
pose, must have felt relieved at getting
his old manager back, and then there
was the only E. B. Thompson prowling
around. He says he only came for the
crumbs, but I think he got a good, big
slice, especially in getting first pen.
There were also in the alley Frank Ham,
George Hillson (with another talk for
centuries to come), Jonas Hayner, with
his mustache off and looking fatter in
the face. But he had to bring his misses

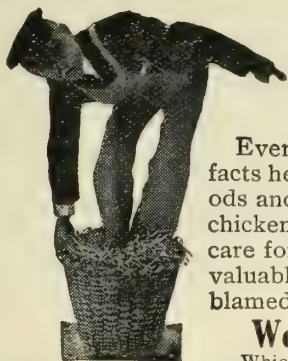

along and a good thing, too, as she is a fine woman and is known by many.

Coming to White Rocks, we find Frank Davey, of Greystone, standing six inches higher than usual. Not over winning first cock and hen in good classes, but over judging the White Wyandottes and thereby adding his name to the scroll of fame, on which we find such names as Cheston, Smith, Orr and others who have made White Wyandotte history; but they say Davey did it well and so the honor and glory is his. But say, Bill, it does beat everything how that fellow can make White Rocks. Then there was M. F. Delano, but he is also in Wyandottes and Orpingtons and he will get a mention as we go along. There was also Mr. and Mrs. Graves showing in Wyandottes and Rocks and getting the first prize on White Rock cockerel for seventh year in succession, so I was told. Well, they have all been great birds. Mrs. Graves was looking well. She showed the Wyandottes. It is a great thing how the world goes around and you can sell your birds under a contract and then marry a man with the same name and still go on showing birds under his name. However, it all amounts to this: Never try to prohibit a person from showing after buying his stock, as the world is free, and if he or she can produce the goods after selling you their best stock, by all means let them do it. There were all kinds of rumors around the garden as to the outcome of the meeting held to consider the charges against Graves, but I could not get hold of anything reliable, so you must wait until I hear more. Then in White Rocks our old friend Harry Lamson was on the job. He is back in Watertown now breeding them, but still looks the same Harry, but not as frisky as in the days that are past, when he and Burgott and some others used to try and make history for New York City. Then we went over to Wyandottes and there we saw Duston, with a winning string, as usual, but he was not in good voice when I saw him, but he certainly made a good win. I missed Mrs. Turner this year as she was not on and it did not seem natural without her. Then, of course, Bill, there was Corey buzzing around, doing a little bit all around, and, what do you think—he won first pen in Columbian Wyandottes, and they told me there was a hot class, and when a man like Gus Arnold tells you, he surely knows what he is about. Cleveland showed some good stock in Columbians and was well represented. Arnold looks well and did more business than he could handle, although he did not show a bird. When we got to Leghorn alley we found Dan Young with a new broom and right after him came his wife with a carpet sweeper, and on trying to find out what was wrong saw that they had not left hardly a scrap of ribbon for anyone else, much less any glory. They certainly showed a great team of birds, which were worthy of all the honors bestowed upon them, and then I heard that Dan was made president of the National Leghorn Club, so it must have been the year for honors for Dan W. Young. In a chat with his wife she said that the whole flock were exceptional this year, so it must be the air as she said they were situated in a very high place in Orange county, and there must be something in the air to show them how to produce white birds there as Davey and Corey both came from that county and they, with D. W. Young, can put anything in condition if it has got a feather at all. Then in Brown alley we found

the Indian and her brother, the other Indian. She had all her birds named, and it was very appropriate that "Princess Henry V. Crawford" should win first prize. But, say, Bill, I can tell you this Miss Pitchlynn has a great line of females. In males, of course, the invincible A. C. Smith came out on top. They must have a machine at Waltham, Mass.,

for turning out Brown Leghorn males. Then down from the Leghorns came the Orpingtons, and so, I suppose, you blooming Englishmen will want full particulars of these. Well, I got around first to hear everything I could hear. The air was blue and the muckrakers were much in evidence, but this time there was cause. Last year they kicked (I think I

Poultry Secrets Disclosed

This heaping bushel of winter egg-producing green feed cost 17 cts. "Poultry Secrets" explains fully this secret and many others.

Every successful poultryman knows important facts he never tells. They are peculiar secret methods and discoveries he has made in his work with chickens. As a rule he guards these with extreme care for they are the foundation of his success and a valuable asset of his business. He is not to be blamed for keeping them to himself.

We Will Tell You These Secrets

Which have cost poultrymen years of labor and thousands of dollars. They will cost YOU only a trifle and a few minutes time to write us.

There is no man in the United States who has more friends among poultrymen than MICHAEL K. BOYER. A veteran chicken breeder himself, he knows the business from A to Z, and through his wide acquaintance and friendship he has learned many of their most jealously treasured secrets. This scattered material he has collected in book form, and we are offering it

to the poultry raisers of America that they may share in the knowledge which these successful men have acquired by long years of study and bitter experience. Every secret printed in this book has been obtained in an honorable way, either by permission of the owner or through Mr. Boyer's own experience.

I. K. Felch's Mating Secret

One of the best-known figures in the poultry world is I. K. Felch. Many years ago Mr. Felch published his breeding chart, but later realizing its value, he withdrew it and kept the information for himself. He has now given Mr. Boyer permission to use this information, and it is included in this book.

Secret of Fertile Eggs

Boyer's secret of securing fertile eggs by alternating males we believe is worth \$100 to any big producer of setting eggs. It is something new, and the diagrammatic illustration furnished by Mr. Boyer makes the matter so plain that the novice can easily understand it.

The Secret of Feed at 15 Cents a Bushel

An enterprising poultryman has been advertising this secret for \$5.00 and pledging those who buy it not to disclose it to any one else; it has, however, long been known to a few poultrymen, Mr. Boyer among them, and the method is fully explained in "Poultry Secrets."

Selecting the Laying Hens.

Since the production of eggs is the very basis of the poultry industry, the ability to tell the laying hens in the flock without the aid of trap-nests will put dollars in your pocket. Do not keep on feeding the robber hens. It is well known that some hens never lay an egg, while others often not as good looking produce

200 Eggs a Year.

Of course we cannot go to the length of saying that all the information in the book is new to every one. It is said there is nothing new under the sun, and the Egyptians were hatching eggs by artificial heat centuries ago; but we do say that to the great majority of poultrymen these secrets are absolutely unknown.

We Will Pay \$10 For Any Secret Not in the Book

Provided it is practical and valuable. If it is something both good and new, a check for Ten Dollars will be sent at once. In submitting secrets address all communications to the

Poultry Department of Farm Journal

FARM JOURNAL for thirty years has conducted a poultry department known the country over for the ability of its editors and the value of its contents. It is the standard farm and home paper of the country, with three million readers. It is clean, bright, intensely practical; boiled down; cream, not skim-milk. Its contributors know what they are talking about, and can quit when they have said it. Besides its unusually strong poultry section, which of itself makes the paper valuable to every chicken owner, its other departments are ably conducted and widely quoted. It is for the gardener, fruit man, stockman, trucker, farmer, villager, suburbanite, the women folks, the boys and girls. It is worth far more than the price asked for it and "Poultry Secrets" together. Its more than half million subscribers pay five and ten cents ahead—a very remarkable fact.

We will send a copy of "Poultry Secrets" and **\$1.00** FARM JOURNAL for five years, both for only

Or FARM JOURNAL 2 years and "Poultry Secrets" for 50 cts.

WILMER ATKINSON CO., 836 Race St., Philadelphia, Pa.

We are Willing to Name Here Some of the Secrets

- 1 Burnham's secret of mating fowls.
- 2 Felch's method of breeding from an original pair, producing thousands of chicks and three distinct strains.
- 3 Mendel's Chart of Heredity.
- 4 Secret of strong fertility by alternating males.
- 5 Secret of knowing what to feed and how to feed it. The secret of having green food in winter.
- 6 Secret of sprouting oats and barley for poultry feeding.
- 7 Secret recipes for chick feed; practically the same feed is now sold on the market at a high rate.
- 8 Secret of fattening poultry economically so as to make the most profit out of the crop.
- 9 Secret of telling the laying hens of the flock.
- 10 Secret of detecting age in stock.
- 11 Secret of knowing how to judge dressed poultry.
- 12 The only safe way of preserving eggs.
- 13 A secret of dressing fowls so as to do the work quickly and thoroughly.
- 14 An exposure of the methods employed by some fanciers to kill the fertility of the eggs.
- 15 The winter egg crop and how to get it.
- 16 Fattening turkeys for market.
- 17 Hunter's Secret of Success.
- 18 Secret of the Philo System.

Look for the Sign of the Frog

You will find him only on the line of RANDOLPH Incubators. A good machine is not a luxury, but a business proposition. We have a machine that appeals to the poultry man, for the following reasons: First—It cannot be overheated, for it is regulated by the thermometer in the egg tray, which is connected to an electric damper and operated by a No. 6 dry cell battery. Second—The moisture is applied by absorbing so many ounces of water in proportion to the number of cubic inches of air space in the egg chamber, with the aid of a hygrometer, giving you large hatches of strong, healthy chicks. Third—The egg tray is constructed of slats so the operator only has to handle one-twentieth

of the number of eggs that he would in other makes. Fourth—The ventilation is constantly taking place at all times without creating a draft, leaving your machine in good, sanitary condition. Fifth—The heating is accomplished without any down draft to cause soot, smoke and fire. Sixth—It will only consume one-half the oil other makes do and hatch larger chicks.

We guarantee the Randolph Incubator to out hatch any incubator on the market, and the chicks will weigh more when hatched in our incubator than any other make.

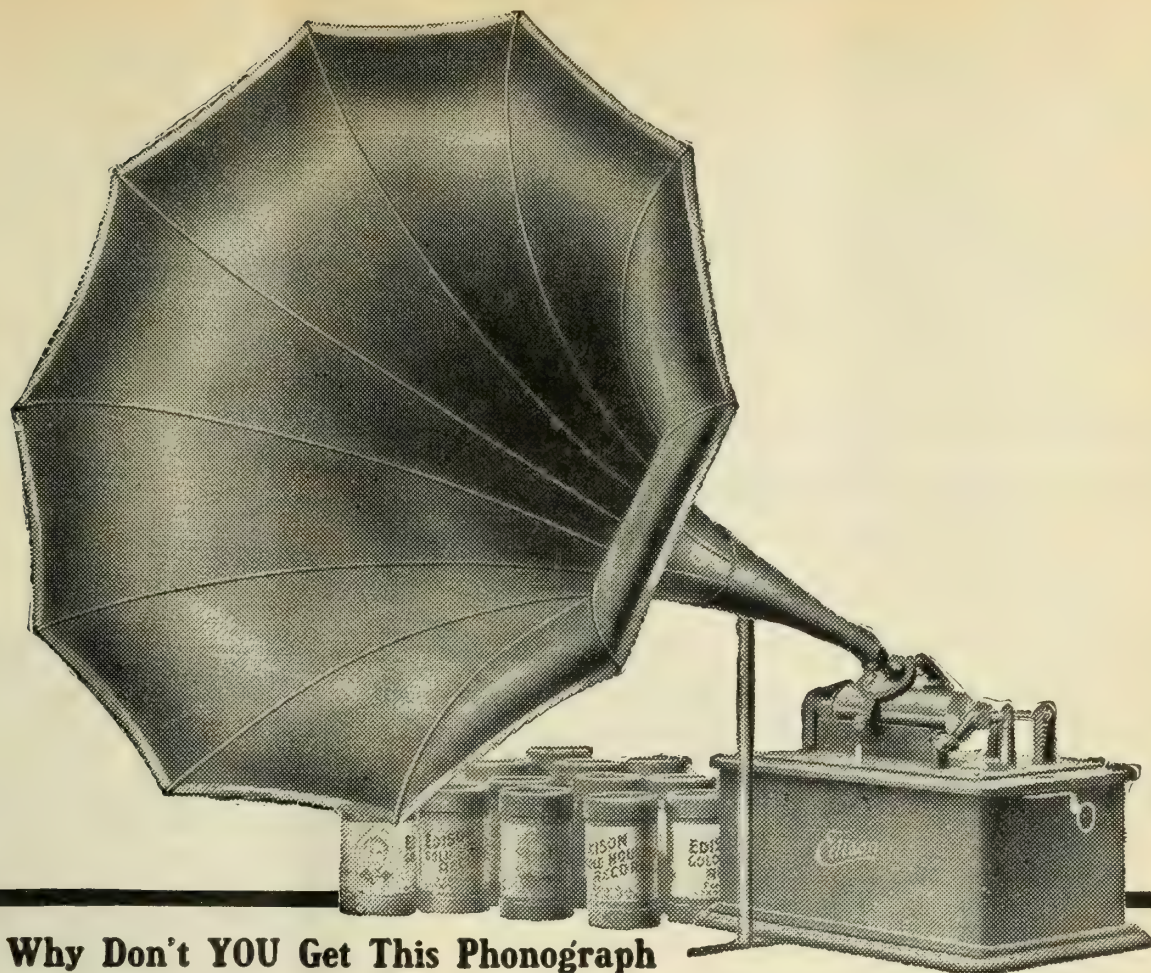

RANDOLPH INCUBATOR COMPANY
TOLEDO, OHIO

This is the Incubator that beat the hen that stole her nest.

wrote and told you) about Okes; he was going too much for color alone, and so they got a change and the change was too much for them. A young fellow from out West by the name of Stanfield judged; a tall, lean, young man, with a kind of slouch gait and a voice that does not seem to belong to him. He has grown quite fast, anyone can see, but his voice has grown faster. Well, what he did do you will see in the papers, but what he didn't do you could hear in the alley. By his talk he seems to me to be a crank on tails, or by his awards, the want of tails, as certainly the first and second black cocks did not cover themselves with glory or feathers in the tail region. There were a great lot of birds present, but the small, tailless ones were the ones selected. In hens the best hen was left out because she was too black! but I noticed in several of the birds placed that they might have been black but they also had purple. In buffs the best birds in cock and hen class were left out, the cock for poor feet and condition and the hen because she had her tail. Say, Bill, there was two of the greatest Orpingtons I have ever seen, and you know I have seen a few. These were not even placed, but what were placed were jokes, especially the fifth cock. In whites there was shown the best white Orpington ever shown, not excepting the famous Peggy. The White Orpington cockerel was a great bird and no mistake. Even the judge had to acknowledge his superiority, even to his tail. The first Buff pen was also a popular award and it was a great pen, especially the male bird. But I cannot say the same about the first black pen, as one of the females had white enough in her to disqualify the pen. Now, about Stanfield. I have always thought he knew an Orpington and I believe it yet, but he had a remarkably hot class and had to get his awards in by a certain time, and I think he suffered a little from stage fright, but still a man that takes it on to judge a show like New York's must think himself capable and so must expect (if his judgment does not coincide with the bulk of exhibitors) to be criticised. I think the man judged honestly, but still it was unfortunate, and as I was not an exhibitor, I simply tell you from an outside point of view.

Now, Bill, I must tell you who was there. First, we met Mr. Barnum, of Lime Rock, in a voluminous garment. He was quite elated over his winnings. But, say, what a good joke on him, his best black hen and, in fact, I think the best hen in the whole class, was left out for being too black! Shades of Partington and Cook! Did you ever hear of such a thing? If we get rid of purple we get them too black. Well, Barnum was elected president of the Orpington Club, so it's up to him to have a fine president's cup next year and offer it for the best hen too black for competition! Well, next we came across J. M. Williams, of Michigan, feeling pleased with his birds, himself the judge and in fact everyone, as he had won first black pen. He also made a good win in buffs. I suppose he has shown so much under Stanfield that he knows what he wants; anyway he got there with both feet. It surely was a western victory following on a western invasion. Then we met Mr. Prescott. He is the man who bought out Willow Brook after the other fellow had had his pick. He is a nice fellow, with a queer way. His best birds did not catch the judge's eye. However, he will try again at Boston with, perhaps, better success.

Why Don't YOU Get This Phonograph

On **FREE TRIAL?**

For almost three years I have been making the most liberal phonograph offer ever known! I have given hosts of people the opportunity of hearing the genuine Edison Phonograph right in their own homes without charging them a single penny. So far you have missed all this. Why? Possibly you don't quite understand my offer yet. Listen—

MY OFFER:

I will send you this Genuine Edison Standard Outfit (the newest model), complete with one dozen Edison Gold Moulded Records, for an absolutely free trial. I don't ask any money down or in advance. There are no C. O. D. shipments; no leases or mortgages on the outfit; no papers of any sort to sign. Absolutely nothing but a plain out-and-out offer to ship you this Phonograph together with a dozen records of your own selection on a free trial so that you can hear it and play it in your own home. I can't make this offer any plainer, any clearer, any better than it is. There is no catch about it anywhere. If you will stop and think just a moment, you will realize that the high standing of this concern would absolutely prohibit anything except a straightforward offer.

WHY I WANT to Lend You this Phonograph:

I know that there are thousands and thousands of people who have never heard the Genuine Edison Phonograph. I can't tell you one twentieth of the wonders of the Edison, nothing I can say or write will make you actually hear the grand full beauty of its tones. No words can begin to describe the tender, delicate sweetness with which the genuine new style Edison reproduces the soft, pleading notes of the flute, or the thunderous, crashing harmony of a full brass band selection. And you can get the records in any language you wish. The only way to make you actually realize these things for yourself is to loan you a Genuine Edison Phonograph free and let you try it.

Our Easy Payment Plan. I have decided on an easy payment plan that gives you absolute use of the phonograph while paying for it. \$2.00 a month pays for an outfit. There is absolutely no lease or mortgage of any kind, guarantee from a third party, no going before a notary public, and the payments are so very small and our terms so liberal, that you never notice the payments.

If You Want to Keep It

that is, if you wish to make the Phonograph your own, you may do so, but it is not compulsory. I am asking you merely to send for a free demonstration.

Thomas A. Edison

F. K. BABSON, Edison Phon. Distrib'r's, Edison Block, Dept. 3291, CHICAGO

You Don't Have to Buy It: All I ask you to do is to invite as many as possible of your friends to hear this wonderful new style Edison. You will want to do that anyway because you will be giving them genuine pleasure. I feel absolutely certain that there will be at least one and probably more who will want an Edison of their own. If they don't, if not a single one of them orders a Phonograph (and this sometimes happens) I won't blame you in the slightest. I shall feel that you have done your part when you have given these free concerts. You won't be asked to act as our agent or even assist in the sale of a single instrument.

Get the Latest Edison Catalogs.

Just sign your name and address on the attached coupon now and mail it to us. I will send you our superbly illustrated Edison Phonograph Catalog, the very latest list of Edison Gold Moulded Records (over 1,500 of them in all languages) and our Free Trial Certificate entitling you to this grand offer. Sign the coupon now, get these catalogs and select your records at once. Remember the free concerts. Sign the coupon right now.

Let's hope so. Then we certainly met the one and only Percy Cook. What would we do without Percy? Good type, short on the leg, with a well rounded figure; curves and not angles. He was doing a very good business and showed some good birds. His white cockerel was a dandy and from my last mail from home I have been told he was shown at the Palace by a Miss ———, where he created a sensation, as he did at New York, and he certainly is a bird! He is a magnificent type and very good color and very low on leg for a white. Mr. Cook also showed a great buff cock, but owing to his feet did not get in it, although he must have caught the judge's eye, for if you spoke to the judge he

always had an excuse ready why this bird was not placed, and I am not convinced yet. He certainly was a dandy; he was not in the best of condition, but was so far ahead of the class that even that should not have kept him back. However, we still have Percy, so what's the odds. Then we saw Mr. Barry Owep, and to say he was not pleased with the way things went is putting it mildly. He showed a lovely buff hen; she certainly was immense in size, type and color, but was not placed, having too much cushion. Certainly a good thing in this case, as she was set down good and hard. Mr. Delano was also on hand and did not take things so mildly. He certainly made a few good, plain and timely re-

marks. Then we came to Mr. George May. How some people are born great, so Shakespeare says, and others have greatness thrust upon them, and here is an instance. If I had gone to the Garden with the string of birds that May had I would have got a couple of V. H. C.'s, but here he gets plums, such as first buff cock, a small bird, nice color, but out-classed, and first black cock, with poor tailless "Nabob." Oh, Nabob, certainly thou wert born on a lucky day! May, of course, was very enthusiastic about all things, especially England Orpingtons in general, and his in particular. Then there was that painstaking young man, Haring, with his wife. He gets something every time he shows, and some day will arrive with both feet. But anyone can do that with the type always before them as Haring has. His wife is certainly the best Orpington type that comes to the Garden, even beating George Weed, who this year took the chair at the club meeting and said things which were not pleasant to hear, especially to some people who heard them.

Partridge Plymouth Rocks

MADISON SQUARE GARDEN WINNERS

At the late Madison Square Garden show we won second cock; fourth and fifth hens; second, third and fifth cockerels; first and second pullets; first pen and numerous specials in one of the strongest classes ever exhibited at this great show. No better birds anywhere. Write for prices and other information. : : : : :

Hillcrest Farms : W. F. Fotterall, Proprietor : Oakford, Pa.

WHITE ROCKS

BOSTON, 1907—First pen; fourth, fifth and sixth cockerels; fourth, fifth and sixth hens; fifth pullet and fifth cock.

BOSTON, 1908—First pen; first, third and sixth hens; first, fourth and fifth pullet; sixth cock; shape special and color special.

BOSTON, 1909—First pen; first cockerel; second and sixth cock; third hen; sixth pullet and color special.

This record is not surpassed by any White Rock breeder. If in need of breeders or hatching eggs, write me for prices.

M. L. CHAPMAN, 453 Franklin Avenue, Hartford, Conn.

BUFF AND BLACK ORPINGTONS

Madison Square and Chicago First Prize Winners

Fifty choice Buff Cockerels, ten choice Black Cockerels, twenty choice Black Pullets and Hens. All bred direct from above winners. Must be sold at once. Prices that will surprise you. EGG CATALOGUE is now ready. Sent free upon request. Sixteen choice pens to select from.

BOOK YOUR ORDERS EARLY

Will H. Schadt, Goshen, Indiana

WHITE WYANDOTTE PULLET.

Owned by F. D. Sutton, Box 125, Youngstown, Ohio. Scored 96 by Judge Zimmer. This pullet, with other fine females, will be in my breeding yards.

Now, why Weed persists in breeding Black Wyandottes when he could do so much better breeding Black Orpingtons, I cannot tell. Why, he was cut out for it. Not too high on the leg, with a magnificent front development. Why don't he trade with Paul Doll; but methinks that is the way Doll gets so many good ones, as Weed and he are always together. So, after all, we must feel his influence as well as his figure. Then, for the first time, we met Mr. Struble from Ohio, very much tickled at winning first buff pen and here (although we have said things about the judging) we must say was the blue placed right. It was a good win and a popular one. But you should have been on hand on Saturday night, when someone came up to Mr. Struble and told him they were hatched from a setting of five dollar eggs sold by Cook. Then there was trouble, but it all blew over in a happy way as Struble had never had any dealings at all with Cook. I am only telling you about the exhibitors, Bill, though of course we met Harries in the aisle and also Vass, who was showing. You know he is a gay old chap for a city counsellor and Nixon, the White Wyandotte man, has to look after him or he would be lost to Washington, N. J. Then we met Gaylor. Oh, dear, what do you think, Bill; he didn't have a blooming bird and was selling incubators and poul-

try supplies. Oh, dear! dear! what is this world coming to? Then we certainly had a great chat with Miss Hooker, and take it from me, Bill, this old young lady has got some stock in Buff Orpingtons. She did not get as many things as she should have, but still she showed some lovely colored birds and will be heard of again and we will know it. And, of course, we shook hands with Mr. Wallace P. Willets, whose years certainly rest easily on his shoulders, as he was looking fine. And Dr. Kyle. Well, now, what about the doctor? He certainly runs the Orpington Club; if with satisfaction to himself, then certainly to no one else. The doctor had better open his eyes or perhaps there may be no American Orpington Club. Well, now, Bill, I must finish, as the missus is calling. I could go on and tell you more, but if you want to hear it, let me know and I will try and oblige you.

So good-bye, Bill.

From yours truly,

The Man Who Walked Around.

Mr. C. H. Welles, Stratford, Conn.,
the well known breeder of Barred Plym-

outh Rocks and owner of "Fluffy Ruffles," has been further honored by being elected president of the American Plymouth Rock Club. Mr. Welles has a host of admirers and will make a popular president. We owe our congratulations to Mr. Welles and to the members. Mr. A. C. Smith, of Waltham, Mass., has been re-elected secretary-treasurer.

* * *

West Orange, N. J., Jan. 9, 1909.

Editor American Poultry Journal.

Dear Sir: At the recent Madison Square Garden show some person took from coop No. 862 by mistake my first Chicago Columbian Wyandotte hen. This hen is large and very shapely, with low, rather smooth, comb, fine red eye, good leg color, no under color, especially fine tail coverts and fail hackle, and can be particularly known from her young appearance and fine Wyandotte shape. Any person who finds that he has her by mistake will please return her to me.

Charles D. Cleveland,

Sunnybrook Farm, West Orange, N. J.

The Cincinnati Poultry and Pet Stock Company held their annual show in Music Hall, which, as usual, proved to be a grand success, principally due to the hard work of Mr. W. W. White, the president, and Mr. C. H. Dillon, the vice-president. The entries amounted to 1,800 specimens of poultry and pigeons. The awards were placed by George H. Burgott and Loring Brown.

Special Offer to Readers of American P. Journal

Fill in carefully coupon below. Mail it to the Chicago House Wrecking Co., Chicago, at once. We will send you, free of all cost, samples of the very best roofing, ceiling and siding made. These samples are large and generous enough to give an idea of the quality of the large sheets from which they are taken. Or drop a postal saying, "Send free samples of Galvanized Iron Coverings as advertised in American Poul. Journal Sign your name and address, carefully, in full. These samples are absolutely free. Send no money or postage. Our galvanized rust proof iron (see No. 1) is made of the very best grade of specially manufactured iron sheets. The galvanizing process protects these sheets from rust for all time. This thorough coat of non-corrosive metals—tin, lead and zinc—called spelter, is made a part of each sheet through the special dipping process employed. This gives the heaviest possible coat of galvanizing necessary for any covering purpose. Galvanized iron roofing has been used for over 60 years. It has always been and is today the best material for covering buildings made. Keeps buildings warmer in winter and cooler in summer. Positively does not taint your rain water—is never injured by contraction or expansion.

Suitable for Farm Houses, Barns, Stores, City Dwellings, Poultry Houses, etc.

Galvanizing is the life of a metal roof. Our light weight sheets with their heavy galvanizing give better service, besides saving considerable in freight. Do not require painting. Have a mottled, sparkling effect, pleasing to the eye.

Anyone can lay our galvanized rust proof coverings. Ordinary hatchet or hammer are the only tools needed. No experience required. **Illustration No. 1** is Corrugated (galvanized rust proof iron), an all around covering. It is the best. Suitable for ceiling, siding or roofing. Corrugation 1½ inches apart—one inch closer than others. Makes a firmer and better looking sheet.

Illustration No. 2 shows the "V" Crimped Roofing (galvanized rust proof iron) suitable for roofing only—makes a splendid water-tight roof—requires 4" sticks to put on.

Illustration No. 3 shows Standing Seam Roofing (galvanized rust proof iron), requiring set of tools furnished at low price. Makes first-class covering for any kind of a building.

Illustration No. 4 shows Plain Flat Sheets (galvanized rust proof iron), suitable for many special purposes, such as lining, ceiling, roofing sheds and buildings and innumerable purposes independent of roofing, siding or ceiling. It can be soldered.

Illustration No. 5—Beaded Ceiling or Siding (galvanized rust proof iron) makes a handsome ceiling or siding. Easy to apply—suitable for stores, etc.

Illustration No. 6—Brick Siding (galvanized rust proof iron), an exact imitation of regular brick—most suitable exterior for buildings of any kind. Easy to apply, requiring only nails and hammer.

\$1.60 to \$3.25 PER SQUARE!

Our Galvanized Rust Proof Iron Coverings

These six galvanized rust proof iron coverings come in sheets all 6 feet long. Can supply sheets 2, 3 and 4 feet long. Flat sheets are 36 inches wide. All others 24 inches wide, sold by the square of 100 square feet, not including lap. Prices as follows:

Flat, per square \$3.00
Corrugated and all other designs, per sq., \$3.25
When ordering mention lot No. 18

Our Semi-Hardened Steel Roofing

(Not galvanized)

In addition to this galvanized iron, we have a plain light-weight steel roofing of superior quality. It is good for general purposes and can be painted after it is on the roof. Sheets when flat are 24 in. wide and either 6 or 8 ft. long. All other patterns, except the brick siding, are 22 in. wide and either 6 or 8 ft. long. Furnished either painted or unpainted. Prices as follows:

Flat, per square \$1.60
Corrugated and all other designs, per square, 1.85
When ordering mention lot No. 10.

SPECIAL FREIGHT PREPAID OFFER!

At above prices we'll prepay freight in full to all points east of Colorado in the U.S., except Oklahoma and Texas. 15c per sq. additional for these two states. To all points west of Colorado in the U.S., 50c per sq. additional.

HUGE POULTRY RAISING ESTABLISHMENT NEAR LAKEWOOD WHERE THERE ARE INCUBATOR FACILITIES FOR HATCHING MORE THAN 30,000 CHICKS AT ONE TIME.

Under the direction of Austin G. Brown, formerly of Newark, there has grown up on a farm four or five miles out from Lakewood Centre, on the Gould road, which leads to the seashore at Point Pleasant, one of the largest and best poultry and egg raising establishments in the country. Seven years ago the place was an abandoned, untitled farm, on which there was an old-fashioned farmhouse, which was rapidly falling into a state of dilapidation, from which it could not be rescued. It was the old homestead property of Senator A. C. B. Havens, once a power in Ocean county politics, and for ten years or more the county clerk. Now it is one of the best kept places in New Jersey.

The house has been put in excellent repair and is comfortable and cozy even beyond many which are of more modern construction, and Mrs. Brown presides over its affairs with much pride. Country-like, the latchstring is always on the outside and within easy reach, and the result is that there is scarcely a day when the hospitality of Mr. and Mrs. Brown and their establishment is not being extended to from one to half a dozen or more visitors. No crops are raised on the farm—that is, no crops which grow out of the ground. There is more certainty of results, Brown has discovered, and more profit and all-around satisfaction in the careful, scientific breeding of chickens and the production of eggs. The result is that on all parts of the sixty acres of land which are devoted to that purpose there are chicken houses and runs. The buildings are all painted a deep red, and they dot the woodland spaces as well as the open fields, a pretty contrast, and one which catches the eye long before the main entrance to the farm is reached by travelers in automobiles or otherwise, being the groups or flocks of snow-white chickens which abound in the vicinity of each of the structures.

Father a Pioneer Jeweler.

Brown began life by gaining a thorough knowledge of the jewelry business in the factory of his father, the late Thomas G. Brown, of Newark. The latter was known as the dean of the manufacturing jewelry business in New York and New Jersey. He was, at the time of his death in 1903, the retired head of the firm of Thomas G. Brown & Sons, in Franklin street, after more than three-score years in the business. After learning the business, Austin G. Brown went on the road as a salesman. He became thoroughly acquainted with the trade throughout the country, and was successful. A dozen years ago his health began to fail, and he gave up traveling along the jewelry route, and, on the advice of his physicians, went to the Adirondacks about ten years ago to live in the open. That fact became known to the trade, but right there jewelers seem to have lost track of him. Evidence of that fact was given the other day by a Newark manufacturer, who asked: "I wonder what has become of Austin Brown. The last I heard of him was when he went to live in the Adirondack woods, on the advice of his physician.

Some folks said he went away to die, and I guess he did."

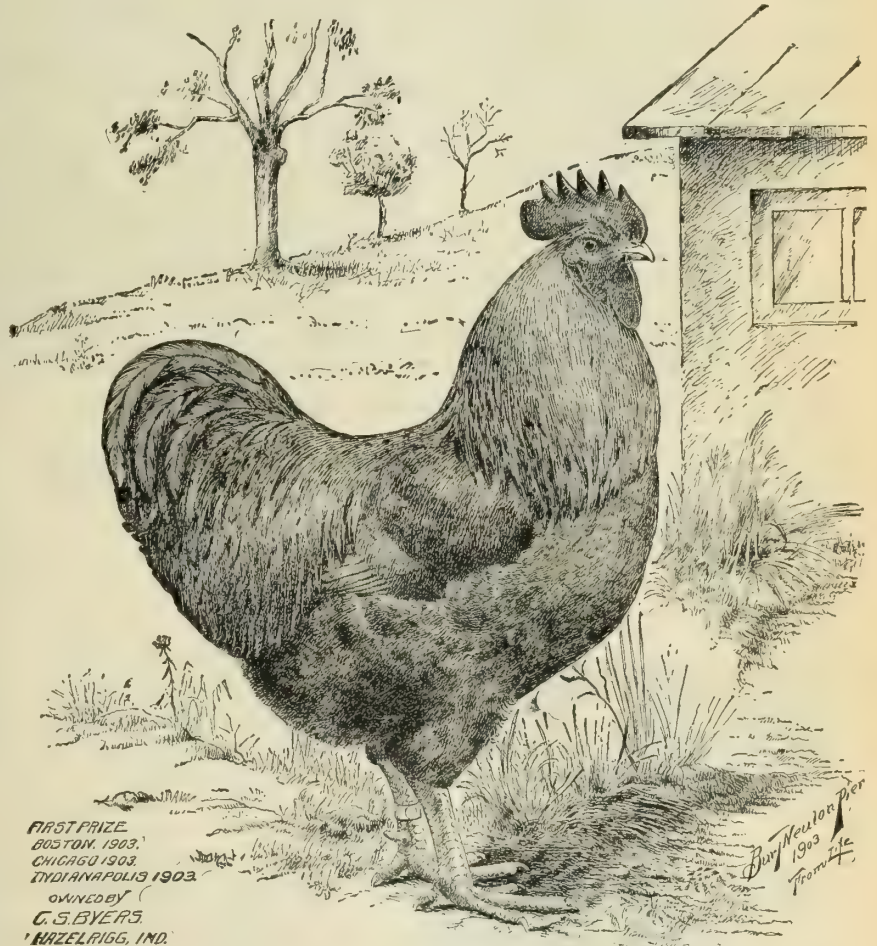

Sought Health in Mountains.

"He's been out of the Adirondack woods more than seven years, and he's down on a farm in the pine belt of South Jersey, just outside of Lakewood, and is accumulating a fortune as a raiser of chickens and eggs. Besides, his health has been entirely restored, and he is now a big, rugged, fine specimen of physical manhood, backed by a vigorous mentality which he is turning to commercial advantage. That's the Brown, the veteran jewelry salesman, as he is today."

Brown left the Adirondack woods about eight years ago and returned to Newark, but his health began to fail

pleasurable occupation than with building up the magnificent business which now exists, he located on the Havens estate and procured a few White Leghorn chickens.

He bought the house and farm for a mere song, and for the first few months devoted his time to repairing and improving the building, finding pleasure in his spare moments in looking after his handful of chickens. Every day he grew more interested in his stock. He studied the chickens carefully and then decided to get more of them. He sent to raisers of White Leghorns in various parts of the country, purchasing a few of the best birds in each place, and soon had two hundred on his farm. By that time he was a chicken enthusiast. He began

A. BYERS' BUFF ORPINGTON COCK.

One of the noted birds used in founding and making possible one of the greatest line bred strains of Orpingtons known in America, established by C. S. Byers, Hazelrigg, Ind.

again, and it became incumbent upon him to seek constant outdoor life again. Someone suggested a residence in the South Jersey pine district, near the famous winter resort, and he went there. He couldn't stand living in idleness, and, besides, his knowledge gained while a traveling man started his thinking apparatus at work on a chicken-raising scheme. When a boy in Newark, chickens and their care and breeding had been his hobby, and at one time he was the master of a flock of about two hundred choice birds, when the Brown homestead was in Clinton avenue, just around the corner from the South Park Presbyterian Church. The more he thought of the idea the more it appealed to him, and more with the notion of finding a

to breed the birds with the idea of creating a new strain, one which would maintain the highest possible standard from a show standpoint, and at the same time be improved for commercial purposes, for he had decided to make a business of chickens and eggs. His health improved steadily, and he felt equal to almost any task.

Mammoth Poultry Plant.

How successful he has been is shown by his present establishment. He now has several hundred poultry houses of various sizes, including immense brooders and hatcheries. He has incubator facilities for hatching more than thirty thousand chicks at one time and a new incubator house, hot water heated, and with

A Wolverine Strain Winner

every modern appliance, is being constructed now. It will be ready for use early in the spring, and will bring the hatching capacity of the farm up to fifty thousand chicks at one time. The incubator will hatch 15,000 eggs every three weeks. There are now eleven thousand single-combed White Leghorn chickens on the farm, all beyond the broiler age, and every one pure white and larger than the ordinary Leghorn. As the result of his study and care in breeding, Brown has succeeded in raising White Leghorns which range from four to six pounds each in weight, though the average weight of Leghorns is scarcely more than three pounds. In breeding to a big bird three pounds. In breeding up to a big bird pearance, but has rather improved his stock in every way, besides creating a country-wide demand for his chickens and for eggs for hatching purposes. When he has his full number of birds after the spring hatching, there will be twenty thousand or more chickens on his farm.

Twenty-five Hundred Eggs a Day.

He is now getting 2,500 eggs a day, and in the flush spring season will get from 6,000 to 8,000 a day. Every egg is of pure white shell, and not one is allowed to go out without being candled, care being taken that none with even a blood spot is allowed to reach a customer, even for eating or hatching purposes. It requires about 2,000 pounds of food each day to provide for the chickens.

Great care is taken in the feeding and housing of the chickens, and not a single thing that will conduce to cleanliness of their shelters, their bodies and their food is neglected, while special attention is given to other sanitary measures for their benefit, such as light, air and heat and ventilation. It was an explanation of these things, together with his personal inspection of every nook and corner of the entire establishment, which caused Richard Croker, former Tammany chieftain and practical ruler of New York, but now a resident of Ireland, to remark during a visit to the Brown farm ten days ago, just before he ordered twelve and a half dozen selected eggs for hatching purposes on his Irish estates:

"This is indeed wonderful. Everything is so clean, so tidy. The houses, the chickens themselves, look as neat as if they had been especially fixed up for my inspection, but I'm told that they are always in that condition, and that Brown will tolerate nothing else. I like the way he gets out and hustles on every part of the proposition, side by side with his most lowly workman. That's democratic, and it's good business. It brings results, because Brown can get a lot of good out of his employees that way which would otherwise go to waste. Besides, it keeps him in close active touch with everything on the place, and though I was surprised at his intimate knowledge of the smaller details, I suppose I ought not to be, since he is better prepared to answer questions even about his own business than many men I have met. He is surely a student, and applies good brains with his physical part of the establishment. I'm told he is making money. He deserves to. I'm going to start a place like this in Ireland as soon as I return there next week."

Many notable men and women have visited the Brown farm during the last two or three years, and John D. Rockefeller

ler, whose vast Lakewood estates are less than a mile away, frequently runs over to the Lakewood Farm to stroll about, admire the beautiful, graceful white chickens and talk about the commercial possibilities which Brown has developed in them. The farm is, in fact, one of the show places of Lakewood during the winter months, and of the many shore resorts within a radius of twenty miles during the summer months. It is no uncommon thing for Mrs. Brown to

treasurer, J. I. Sideman, of New York; secretary, F. J. Brown, Lakewood. Last year, when the equipment for extension of business was not nearly so great as it will be in the coming spring, owing to the enlargement and improvement which have been made during the winter "You're wrong," was the answer. months, the farm profits were \$10,000, after allowing for all expenditures, including interest on investment. This year it is expected that showing will be

breeding hens were also sold to the extent of about \$10,000 worth, and the sale of pullets and cockerels, which is going on all the time, from single birds and trios to lots of from 100 to 600, were disposed of to about the same cash figure. The sale of broilers alone ran to \$5,000 or more, and day-old chickens, which were shipped to every section of the country, brought in nearly another \$5,000, while the sales of eggs for hatching brought a return of more than

Just hatched at the River Home Poultry Yards, Perrysburg, Ohio.

provide luncheon for from two to three dozen visitors on several successive days. They enjoy eating the products of the farm, the home-made "goodies" which go with them, and the general environment of comfort and contentment under which they partake thereof.

Beginning early in March, or late in February, it is planned to push the productive possibilities of the Brown establishment to the limit. It is now known officially as the Lakewood Farm Company, Incorporated. Its officers are: President, Austin G. Brown; vice-president, Lewis P. Cook, of New York;

exceeded, and the growth of the place in equipment, amount of stock continually on hand and volume of business handled will more than justify the recent characterization of the farm by an experienced writer on such matters as the largest and best poultry and egg raising concern in the world.

This winter the eggs are retailing for sixty-five cents a dozen, and the supply does not anywhere equal the demand of the market which has been created. During the last year more than \$10,000 worth of eggs were shipped from the farm for table uses alone. Year-old

\$8,000. Last spring 45,000 chicks were hatched, and more than 25,000 of them were sold when they were only a day old, at from fifteen to twenty-five cents each, according to the quantity taken. This year the hatching will run from 75,000 to 100,000 chicks, as it is planned to almost double the business of every department of the farm, which has grown in seven years from a small venture, undertaken more for pleasure and the acquirement of health, than a vast commercial enterprise which now requires a score or more men the year around for its operation.

We Are Giving Away \$250 Cash

The above amount of cash is to be given away to those who send us the largest list of subscribers to American Poultry Journal by May 18, '09

Also a Pony, Wagon And Harness

Will be given to the boy or girl, man or woman, who sends in the largest list of subscribers to American Poultry Journal by June 18, 1909. **And a Large List of Special Prizes.** Send today for full particulars of this great prize offer and get busy and WIN. Address

The Ohio Hatchery & Mfg. Co.

Box 30, Bellevue, Ohio,

Value of White Leghorns.

Brown attributes the success of his venture to the fact that he has specialized every feature of the business. He selected the White Leghorn at the start and oped them along those lines to a remarkable degree, creating what is already known in the poultry world as the Lake-wood Farm Layers, "The Big Kind." He gives special, personal attention to the brooding, housing, feeding, exercising, productiveness and marketing, in addition to size, and has aimed always to get out of his stock all that it is capable of giving without injury to the strain. There are on the place eleven henhouses, 128x16 feet, with the necessary runs and outdoor pens; 200 brood or colony houses, 5x8 feet, with an outdoor run or yard; 12 houses 8x16 feet, which constitute the "pullet farm"; 6 houses, 16x16 feet, for general use; 6 houses, 8x12 feet, for young cockerels; 1 brood house, 300x16 feet, with 70 pens and lamp-heated brooders, with a capacity of 7,000 chicks; 1 brood house, 100x16, with capacity for 2,000 chicks, steam heated, and a new incubator house, 130x28 feet, hot water heated, and with all the modern improvements, as suggested by the experience of other chicken raisers, as well as of Brown himself, besides more than 200 runs, each 90 feet long, for the chickens in the various colonies of the establishment. In addition to all these there is an office and administration building and the old Havens farm-house.

Thus in a few years what was a neglected and unproductive farm has been transformed into what is perhaps the largest—certainly the most famous—egg farm in the world.

—Lakewood Times and Journal.

Editor American Poultry Journal.

Dear Sir: I would like it if you could spare space in your valuable journal for a few words on the Wyandotte family.

In reference to the Wyandottes, the origin and history of the breed is well known.

First—White Wyandotte has yellow legs and beak.

Second—Buff Wyandotte has yellow legs and beak.

Third—Silver Wyandotte has yellow legs and beak.

Fourth—Golden Wyandotte has yellow legs and beak.

Fifth—Partridge Wyandotte has yellow legs and beak.

Sixth—Silver Penciled Wyandotte has yellow legs and beak.

Seventh—Black Wyandotte has black beak and legs with yellow bottoms.

Now, why do they get away from the Wyandotte family on the Black Wyandottes, when all the rest of the family has yellow beaks and legs. Why not let the Black Wyandotte have the yellow beak and yellow legs also, and for what reason should a Black Wyandotte be disqualified because it has the yellow beak and legs? Now it looks to me like you were going out of the family when you call for black legs with yellow bottoms.

Why not give the Black Wyandotte with plumage, shape, comb, eyes, wattles and ear lobes, neck, back, all up to standard requirements, and with yellow beak and yellow legs a chance? I would say encourage the yellow beak and yellow legs and make the Black Wyandotte truly a fancy fowl, also a market fowl,

and the best laying strain in the world, and a much finer fowl for exhibit.

Pure black fowls have come to notice with almost yellow beaks and legs, but they are only considered an accident. I have now the Black Wyandotte with yellow beaks and legs which are no accident, but the results of years of careful breeding to produce the yellow beaks and legs. Must I now turn backward to the Standard which I think is too far back in the breeding of Black Wyandottes, or shall I go forward in the breeding line and wait until such a time when the Standard will give me my just dues? Now why should my Black Wyandottes be disqualified just because they have yellow beaks and yellow legs, when they are up to Standard on all other points?

J. B. Taylor.

Wilmington, Del.

Questions and Answers

Questions asked by subscribers will be answered in this department only under the condition that the full name and address is signed by the writer

Question—(1) Is scratch feed good for hens? (2) Are Silver Laced Wyandottes a hardy fowl? (3) Are they as good as the Barred Plymouth Rocks? (4) Is the dry mash good for poultry? Should wet feed be given to poultry, such as shorts and meal? (5) Should there be a floor in the poultry house? (6) Does it hurt hens to go out in the snow? Some people say it stops them from laying. Do you think it does? (7) Should cold water be given hens in the winter, or is a little warm water best? (8) Should chicks be hatched before March? L. A. M.

East Walpole, Mass.

Answer—(1) Yes. (2) They are so considered. (3) This is a matter of opinion. (4) Both wet and dry mash are being fed to fowls in all sections of the country, and either can be used with success. (5) A floor is not really necessary, but we prefer a board floor, as it is easier to keep clean. (6) Yes, it will stop egg production. (7) Ice-water should not be given fowls; the chill should be taken off. (8) Chicks may be hatched any time, but we consider April the best month in which to hatch.

Question—(1) Have a few chickens that are sick. Their eyes get very sore and begin to water and swell up and in a day or two they drop over dead. They go blind. (2) What is the average weight of an eight months' Partridge Cochins rooster? (3) Can a rooster from this last spring be used next summer on hens from the same setting? G. E.

Dubuque, Ia.

Answer—(1) Roup. Separate the sick birds from the flock and place them in warm, dry quarters, and use some one of the various roup cures advertised in these columns. Thoroughly disinfect your houses with a 10 per cent solution of crude carbolic acid. (2) Nine pounds; female, 7 pounds. (3) Yes.

Question—(1) I have four Single Comb White Leghorn pullets and a cockerel that I got from a friend; all came out of same hatch. Tell me what step to take to line-breed. Must I go ahead and breed cockerel, or the old

cock that sired them? (2) I have a nice Single Comb Buff Leghorn cock, good in every respect except one wing has a few white feathers, but my pen of hens are good in plumage. Do you think there would be bad results to breed to this cock? (3) Don't you think free range with colony houses would be an ideal way to breed my Single Comb Buff and White Leghorns? (4) Can I get good comb results to breed from a cockerel with four points? (5) What makes some of my chickens stay on roost nearly all day? They seem to look healthy. E. M. S.

Temple, Tex.

Answer—(1) Mate the pullets with the cock bird. (2) Should not be used as a breeder under any circumstances. (3) Yes. (4) The chances are you would not. (5) You probably feed too heavily and don't give your fowls a chance to work for what they get.

Question—Why are the Cochins not advertised as much as other breeds? Am about to try poultry raising and, as I prefer the Cochins type, would like to know if they are a good all-around-purpose fowl and whether they are good winter layers. Would like to know where good fertile eggs of same can be had. P. R. B.

Chicago, Ill.

Answer—Cochins are not bred as extensively as they were a few years ago, they having been crowded to the rear by the newer varieties, such as the Rocks, Wyandottes, Orpingtons and Rhode Island Reds, as any of these are considered a better general-purpose fowl. Consult the advertisements in this issue for names of Cochins breeders.

Question—(1) What is the standard weight for Black Hamburgs? (2) Are the Blacks an original breed, or from other Hamburgs? (3) Do Hamburgs stand confinement as well as and lay as large size eggs as Leghorns? (4) Are Hamburgs as good layers as Leghorns and Minorcas, and wouldn't they be a good breed for an egg farm where cost of feed is high? W. C. S.

Sterling, Colo.

Answer—(1) There is no standard weight for Black Hamburgs. (2) The

Black Hamburg is of English origin, and was known to exist as far back as the fourteenth century. (3) Yes. (4) Hamburgs are considered excellent layers and would no doubt prove profitable on an egg farm.

Question—(1) I have a henhouse 10 by 12, two stories high. The upper story I use for my setting hens; the lower room I use for their sleeping room. This room is 6 feet high, or rather 4 feet from the ground; the other 2 feet I dug in the ground. Do you think this will be too damp for them to sleep in? (2) I have an inclosed run 12 by 32 feet. Can I keep forty hens in this space winters with good results? (3) Have Black Langshans. Do you consider these good as winter layers? W. W. H.

Lawrenceville, Pa.

Answer—(1) If properly ventilated and plenty of sunlight can get in the house it will not be too damp. (2) Yes. (3) Yes.

Question—(1) Do you consider green cut bone good for hens to make them lay? If so, how much would you feed

To "the Man with the Hoe"

A generation ago, Samuel Allen was tilling his land in the same way as all the rest of the farmers. He was a good farmer, and he was not satisfied with doing the work in the slow back-breaking way it had always been done. He wanted bigger results, without working so hard to get them. He knew what kind of tools he needed, but there was nothing but the old-fashioned farm implements that had always been used, so he started to make implements for himself that would help him do the work of his farm. His neighbors soon saw how easily he did his work and how he actually got larger crops with less seed. The first thing he knew, his neighbors were borrowing his implements to do their own work with. Seeing that his neighbors thought so much of his implements, Mr. Allen determined to make more and sell to his neighbors. He started, and has been at it ever since. His "neighbors" kept constantly increasing in numbers, until they reached from the Atlantic to the Pacific, and from the Gulf beyond the Lakes; and he was compelled to manufacture on an extensive scale.

Mr. Allen calls his implements the "Planet Jr." from the resemblance of certain of the implements to the planets revolving around the sun.

Mr. Allen's ingenuity shows itself in everyone of the forty-five kinds Planet Jr. Farm and Garden implements, which he makes. For instance, the No. 25 Planet Jr. Hill and Drill Seeder, Double Wheel Hoe, Cultivator and Plow combines every useful garden tool in one strong, light, easy running, simply adjusted implement that does the work of three to six men working in the old-fashioned way.

The results obtained with these implements are simply marvelous compared with old-time methods. Their merit and popularity is shown by the two million users of these implements at the present time, and the enlargement of the factory which has been made necessary to supply the increasing demand. S. L. Allen & Co., of which Mr. Allen is head, is the organization which now makes these implements, and they have issued a new 56-page illustrated catalogue of Planet Jr. implements for 1909, which they are sending free to those who write to S. L. ALLEN & CO., Box 1107 T, Philadelphia, Pa.

How to Build Poultry Houses

A 64-PAGE BOOK

Devoted to the construction of poultry houses and fixtures, brood coops, etc. This book gives plans and specifications for building all kinds of poultry houses, brood coops, nest boxes, dust boxes, shipping coops, etc. This book should be in the hands of every poultryman. It will save money by telling just the kind of house desired for the different localities and the size best suited for the various sized flocks.

Price is only 50 cents

Will send this valuable book and American Poultry Journal one year for 75 cents. Send all orders to

The King Green Bone Cutter and Feed Chopper

Did you know that bone cutters have seen a great and radical improvement? Did you know that a green bone cutter can now be purchased for one-half the former cost, and that this machine has greater capacity and is far more durable than any other? Did you ever suspect that a machine could be made to CHOP the bones like a butcher's cleaver, (WHICH IS THE EASIEST AND QUICKEST WAY OF CUTTING THEM) AND CUT THEM FINE ENOUGH FOR SMALL CHICKS? A simple machine, too,

which will cut the hardest green bones—also vegetables, corn and other feed. Write for information about this up-to-date machine. More of them were sold at three last annual poultry shows in Chicago than all other bone cutters combined. Invented and manufactured by

R. H. O'NEILL, 5205 Wentworth Avenue, CHICAGO, ILL.

EGGS FROM FOGG'S S. C. W. LEGHORNS Will Hatch You Winners and Heavy Layers

One breeder hatched pullets from eggs bought of me last season that won first, second and fourth at Nashville, Tennessee. Plenty more have done just as well. If you want the best for your money in eggs for hatching, get my SPECIAL MATING LIST. I pack eggs so they don't break. Send for my SPECIAL LIST today, my catalog is free too. Get them both.

**N. V. FOGG, Box R
Mt. Sterling, Ky.**

S. C. R. I. REDS Exclusively LINE BRED Red Raven Strain

Red Raven fourth, the best Red male I ever saw, will head my pen. He is a line bred descendant from Red Raven first, who was scored 953½ by several judges in the show room. I will mate only a few carefully selected females to him and will sell only a limited number of settings at \$10.00 per 15. Fertility and a fair hatch guaranteed. Place your order early.

CHICKS

them and how often? (2) Should you have one rooster or two with twenty-five hens so the eggs would be fertile to set? C. O.

Carthage, N. Y.

Answer—(1) Yes; about 2 oz. to each fowl three times a week. (2) Ten females to one male is about right for best results.

Question—Will feeding fowls flour of sulphur to prevent lice injure the fowls or not? Mrs. W. W. H.

No. Ft. Worth, Tex.

Answer—The constant use of flour of sulphur will no doubt injure the fowls, just the same as the constant use of any drug will. Flour of sulphur given to fowls will not prevent lice.

Question—(1) Please give a brief history of the Pyle Leghorns, as origin, color, comb, ear lobes and color of legs. (2) Are they as good layers as the Brown or White Leghorns? H. A. R.

Basil, Ohio.

Answer—(1) We know very little about the Pyle Leghorns, as they are not a standard breed. Write to E. G. Wyckoff, Aurora, N. Y., for full information. (2) They are reported to be wonderful egg producers.

Question—(1) Which are the most profitable chickens of all varieties? (2) Are not Orpingtons, Buff and White, as good or better than other varieties? (3) Please tell me, if I ordered eggs from a highly advertised poultry dealer, could I make good breeding birds from them? (4) Would it do to mate fowls from the same hatch of eggs? (5) Is a fenced-off piece of shady woods good for a scratching yard for fowls? Edison, Ga. V. M. K.

Answer—(1) We cannot answer this question, as it all depends on the man who is raising them. (2) They are probably as good, but no better. (3) You would if you gave them proper care and attention. (4) Yes. (5) Yes.

Question—(1) What is the standard weight of Rhode Island Reds? (2) Of Buff Leghorns? (3) How many window sashes 32 by 28 inches are necessary in a pen 9 by 16? (4) How long a roost is needed for twenty hens? (5) If the house is lined with tar paper will not this aid in keeping off the lice? (6) How many quarts of feed should be fed daily to thirty Rhode Island Red hens? V. V. S.

Housatonic, Mass.

Answer—(1) Cock, 8½ lbs.; hen, 6½ lbs.; cockerel, 7½ lbs.; pullet, 5 lbs. (2) No standard weight for Leghorns. (3) Three. (4) Fourteen feet. (5) Yes. (6) There is no set rule for feeding fowls, as some eat twice as much as others; the average is a small handful of feed to each fowl three times a day.

Question—(1) Where could I buy a book of plans showing how to lay off a poultry plant, building houses, etc.? (2) Three of my chickens have scaly legs. I have applied lard and coal oil, but without good results. F. V. A.

Hagerstown, Md.

Answer—(1) Our book, entitled "How to Build Poultry Houses," is what you should have. Price 50 cents. (2) Soak the legs in warm, soapy water. When thoroughly softened the loose scales may be removed without causing bleeding, after which apply carbolic ointment or balsam of peru.

Question—(1) Do not hens lay by liters in winter as well as in summer, with an intermission with a more or less disposition to be broody, according to the breed? (2) How long should the intermission be with healthy W. P. Rocks cared for as well as if laying? (3) I believe most of my hens moult every litter they lay. They certainly do several times a year, beginning after laying well for some time. Is this very natural, or what is the probable cause? (4) Should salt be fed in the clover mash once a day, and how much to 100 hens? (5) Should common baking soda be given once a day in mash, and how much for 100 hens? (6) Can hen droppings be used freely on a vegetable garden, as other manure is, and what will probably result? (7) Is there much advantage for next winter's laying in setting hens this month (January)? J. M. W.

Ft. Atkinson, Wis.

Answer—(1) Yes. (2) One to two weeks. (3) Hens should moult only once a year. Your fowls are either too fat or lousy. (4) A little salt will do no harm, but most breeders do not give salt to their fowls. (5) Baking soda should not be fed to fowls, but may be given to them in their drinking water; a teaspoonful to a quart of water once a week. (6) Hen manure is much stronger than any other and should be mixed with black soil in proportion of one to ten before using on garden. (7) No.

Question—What method besides pricking with a needle to keep fertile eggs from hatching? E. A. B.

Chesterton, Ind.

Answer—Better quit the chicken business if you are afraid some of your fel-

low men will get a little benefit out of what you produce on this earth.

Question—(1) Define the age of cock, cockerel and pullet. (2) Will it injure the flock if hens of inferior quality be kept in pens of fine stock, these hens being used for setting purposes? (3) What is a good way to cure brooding? (4) Would you advise using sawdust on drop boards? P. B. H.

New Orleans, La.

Answer—(1) A cock is a bird one year of age or over. Cockerel and pullet under one year. (2) No. (3) Confine the bird for a few days in a small coop or put her in a pen with several male birds. (4) No.

Question—(1) We have a very vigorous R. Island Red cockerel hatched in July. Would seven well developed pullets be too many to mate with him by March 1? (2) The points and upper parts of combs of some of my Rhode Island Red cockerels look dark and points are coming off as if they had been frozen, which could not possibly be. What is the cause? (3) Can the moult of fowls be controlled to any certainty? (5) Could they be treated in any way to cause them to moult twice in a season? (5) I notice at times on entering a poultry house in morning the droppings smell unusually strong. What is the cause? (6) Would lawn clippings cured as hay make good winter food for laying hens? Mrs. J. C. C.

Jollytown, Pa.

Answer—(1) No. (2) Must have been injured in some way. Use plenty of vaseline on the combs. (3) No. (4) No.

SINGLE COMB BUFF LEGHORN
Eggs from Boston, New York and Indianapolis winners at \$5. \$3 and \$2 per 13; \$10 per 100. PETER S. HURT, K. R. 5, Thorntown, Indiana.

Rose Comb White Leghorns
First prize winners Chicago show December 1908. Year old hens and pullets for sale. Hatching Eggs \$3.00 and \$2.00 per setting. Write your wants. THE MAPLES Maywood, Illinois.

Lee's S. C. Buff Orpingtons

The Vermintrap FOWL PERCH

exterminates all night feeding parasites on fowls. There is nothing haphazard about its work, nor does the efficiency depend on any element of chance. The lice must come to it. In principle it is scientifically correct and in practice it does neat, clean work. It has no competitor and it never fails. Write for a booklet to W. W. FRANTZ, Waynesboro, Pa.

DAY OLD CHICKS

Our 9th season S. C. Brown, White and Buff Leghorns, Barred, Buff and White Rocks, White, Silver and Partridge Wyandottes, Buff Orpingtons, R. I. Reds, Bl Minorcas. Catalogue free. M. UHL & CO., Box B, New Washington, O.

PITTSFIELD BARRED PLY. ROCKS

Have Been in the Winning Wherever Shown

AT PORTLAND, 1908-9—We won twenty-four regular and special prizes including first and second cocks, first and second cockerels, second pen and five places on females. Also A. P. A. gold medal for best bird, any variety, and silver medal for best American cockerel.

AT BOSTON, 1909—We won eight regular and special prizes in competition with the very best breeders in this country.

OUR STOCK—Is also a No. 1 in egg producing quality and is the best combined fancy and utility strain of Rocks in existence.

WE CAN OFFER YOU—Exhibition stock. We have some splendid birds, both cockerels and pullets that are bound to be heard from in the show room, because they are bred that way. We back up this claim by our this season's show record and by our record in the show rooms of the past.

EXHIBITION BREEDING BIRDS—We have a splendid line of cockerels and pullets suitable for either cockerel or pullet matings and our prices are low.

UTILITY BIRDS—We have a large flock of heavy laying birds, about 4,000 from which we can sell breeding birds at low prices, including a large lot of utility cockerels.

EGGS FOR HATCHING—After January 20th we will sell eggs from our prize winners. From our Special Exhibition Matings, "as they run" from all pens: \$4.00 per 13, \$12.00 per 50 and \$24.00 per 100. Utility Eggs for Hatching—We ship all eggs on the day they are laid: \$1.50 per 13, \$4.50 per 50, and \$7.00 per 100.

DAY-OLD CHICKS—Hatched from our Hall Mammoth Machines, perfect in regulation and ventilation, hatching strong and vigorous chicks. Price 25c each, or \$15.00 per 100. We guarantee safe delivery.

CHICKEN HEALTH

NOTHING LIKE GERMZONE.
I have used everything in poultry medicine I ever heard of but I never saw anything like Germzone for curing disease and keeping chicks healthy; in fact, I would not be without it. G. NIBBE, W. Hoboken, N. J.

Germzone is the best insurance policy you can get for your poultry. It not only cures but prevents disease.

GERMOZONE

can be profitably used every month in the year for Roup, Cholera, Bowel Complaint, Chicken Cholera, and other diseases so common to poultry and so discouraging to the poultry-raiser. It makes sick fowls well and keeps them in good condition. Its more than 12 years continuous popularity proves its thorough reliability.

Germzone is a germicide, a bowel regulator, a system builder. It goes to the seat of the trouble and effects a sure and permanent cure.

Given in the drinking water twice a week it cures disease, prevents contagion, and keeps the fowls in a healthy, vigorous condition. Prepared either in tablet or liquid form and will be sent, postpaid, on receipt of price.

Germzone is the best health insurance you can have for your poultry. Cost is small, and it is sold on an absolute guarantee.

Price 50 cents; at your dealers or direct from

80c for Corn

This is a good price for corn. The man who gets 16 lbs. of pork out of a bushel of corn fed to his hogs gets this price. Some have reached 18 lbs. The man that only gets 8 lbs. has something to learn that would benefit him.

Some farmers were a third of their feed given to hogs because they are not informed of the best methods of feeding.

What to feed and what combinations to make, to cheapen the feed for the best results and profits, is what each farmer and feeder should know.

J. J. Hill, the long, level-headed railroad king and philosopher, says: "We can double the yield of our crops by knowing how to farm right."

The American Swineherd

is a specialist and will teach you how to get the best results and make the biggest profits from hog raising and corn growing. Hogs and corn go hand in hand.

Why not learn how to make two pounds where one was made before and grow two bushels where one was grown before.

Prof. Kennedy of the Iowa Agricultural College says: "Your paper is a leader in its line of feeding."

Special Offer: Send us \$1 for four years' subscription to the AMERICAN SWINEHERD, and we will send you as a premium a copy of the Pig Feeders' Manual, a practical, instructive book on feeds and feeding swine worth \$1 itself. This equips you for a successful hog business and is the "Cheapest Expert Help You Can Hire."

AMERICAN SWINEHERD

Secures a copy of "Why Poultry Pays and How to Make it Pay." A 64-page book for the amateur and experienced fancier, and American Poultry Journal for one year.

(5) Poor ventilation in your house is probably the cause. (6) Yes.

Question—(1) Please answer in the next issue the following: I have a hen that has a white circle around her eyes that looks like a kind of decay of the eyelids and there is a very little water coming from the eye at times. She seems to be healthy and eats as well as ever. (2) I have another hen that will not eat. The first time I noticed there was anything the trouble with her she was sitting around and would not scratch when I fed the other hens, but would pick up a few kernels of corn now and then. Now she will not eat at all. Her droppings are very thin and she is very poor. Sherman Mills, Me. D. B. C.

Answer—(1) Eye disease in fowls is usually due to improper ventilation in the roosting room. Use a little burnt alum for the eyes. (2) This is what is known as asthenia, or going light. There is no cure for it. Better use the hatchet.

Question—Would like very much if you will kindly inform me what was the trouble with this pullet: The first I noticed she was not eating as she should, and that her tail seemed to droop and she was passing blood. Then the next day there was a very large pool of blood where she was laying in the yard. Then my wife brought her in the house and gave her castor oil and sweet milk and this seemed to be stopped. Then her crop swelled and turned black, and she died. W. B. W.

Indianapolis, Ind.

Answer—This was evidently tuberculosis of the liver, and is incurable, therefore treatment is not recommended. This is considered contagious, and therefore everything should be thoroughly cleaned and disinfected.

WHITE ORPINGTONS

First and second cockerel and pullet, 2d and 3d hen. At Chicago December 1905. Mating list sent on application.

PRATT'S POULTRY PENS, M. P. Pratt, Prop., Evanston, Illinois

Eureka Leg Bands

Adjustable. One dozen 15c; 25 for 20c; 50 for 35c; 100 for 60c. Sample free. Wagle Printing Co. Marshall, Mo.

White Wyandottes

Silver cup prize winning quality at Warsaw, Indiana. I won three firsts, two seconds and silver cup for the best pen, 500 birds in the show. At Illinois State Show on two entries I won third cock and third hen. Stock for sale. Eggs \$3.00. Two settings \$5.00.

Lillie Downes, R. R. 36, Peoria, Illinois

CLOSING OUT SALE of S.C. Buff Orpingtons

On account of moving, I will sell good hens, late pullets and cockerels for \$1.00 each. They will all be gone in thirty days. Do not write for catalogue. Send money with order. They will and must go now.

W. A. ANDREWS - Box A, CONWAY, MO.

Kaye's Single Comb Black Minorcas

The great laying and exhibition strain. Choice cockerels. Fine winter laying hens and pullets for sale. Eggs in season. \$3.00 and \$5.00 per setting of 15.

A. B. KAYE, Kaye's Park, Waiworth, Wis. State Vice-President American Black Minorca Club.

Poultry Post, Printing Dept., Goshen, Ind.

Another 75 Cent Combination

THIS SEASON we are going to give our readers their money's worth, even though we don't make a cent, and in keeping with this determination we have just made arrangements with the publishers of Farm Journal, Philadelphia, Pa., whereby we can make the following offer:

American Poultry Journal One Year } **For Only**
FARM JOURNAL Five Years } **75c**

And in addition each subscriber will receive a copy of a Lincoln Farm Almanac for 1909, one of the most interesting ever issued, and will contain new and old stories and anecdotes of Lincoln, his boyhood on the farm, later life, some of his best stories, his own account of his life, famous sayings, his wonderful Gettysburg speech, a brief account of his death, and other matter. This is illustrated with original drawings done especially for this work.

Twenty-four pages are devoted to matters of interest to all farmers, including a new and complete spraying table for fruits and vegetables, a planting table, cubic, square and long measures, table of weights, rules for curing dried beef, Smithfield hams and other meats; household recipes, directions for canning and preserving; how to have good roads, a complete list of Farmers' Bulletins published at Washington, list of Experiment Stations for all states, etc.

This is a Combination of two of the Oldest Magazines of their kind in the Country

American Poultry Journal is the oldest poultry publication in America, and contains more valuable information for poultry raisers than any other paper published in the world. In addition to this there will be five more of those handsome full-page colored plates of poultry inserted during the coming season, any one of which is worth more than the price of a year's subscription.

One of the special features of American Poultry Journal this season is the continued story of the Walling Family and their experience in the poultry business. Much valuable information for the amateur is given in this story. There will also be many new features added from time to time, which will always keep American Poultry Journal at the top.

The Farm Journal is a National agricultural magazine, published monthly in Philadelphia, Pa., U. S. A. In circulation and influence it is unquestionably the foremost farm paper in the world. It goes each month into more than five hundred thousand homes in the United States, Canada, Mexico and foreign countries, and is regularly read by nearly three million people.

The Farm Journal was first issued by Wilmer Atkinson in March, 1877, and has been published continuously by him to the present time. It consists of from 32 to 60 pages, according to the month. It is printed on good white paper, in large clear type, and is fully illustrated.

The high quality and practicality of the Farm Journal, together with the very low price of subscription, make it the most remarkable value among American periodicals.

This offer is for both new and renewal subscriptions. Cut out the coupon and send in your order today. Address all orders to

American Poultry Journal Pub. Co.

SCORE CARD VS. COMPARISON.

This subject comes up annually with a few of the leading poultry journals stating that comparison judging is gaining in favor with exhibitors. On looking over the list of shows slated for the fifty odd judges who are chosen to pass on the 350 or more shows listed for 1907-8 we notice that over 90 per cent will as usual be judged by the use of the score card; nearly all associations that live three years or more try a comparison judged show or have a representation among its membership who want to get the experience of such a judged show, but invariably they go back to the score card. The principal reason for this is that the average breeder realizes that if he gets a score card of a chicken, even though it is not a winner, he has something to compare his other specimens with, as well as note wherein his losing fowls fell short in comparing the out points as made on the cards for shape and color with those that won.

Looking backward and bringing to the mind's eye the many experiences as breeder, exhibitor and judge of standard fowls in the twenty-four years of observation and study, with but very few exceptions I have found the score card giving the greatest satisfaction and proving most in-

Humphrey's Advice Force Your Hens to Lay in Winter

During the winter time, you can average from 12 to 15 eggs from every 20 hens, no matter how large your flocks are.

Fresh cut raw bone is the food that forces hens to lay, and it should be prepared in a Humphrey Open Hopper Bone Cutter.

March chickens are the biggest money makers for the Poultryman. Therefore, get your hens into laying condition now.

Fresh cut raw bone produces eggs for early setting.

Fertile eggs mean more chickens—more money.

Fresh cut raw bone insures fertile eggs.

Low vitality causes chicks to die in the shell. Fresh cut raw bone means vigorous chicks.

Early broilers and friers bring big prices—large profits. Fresh cut raw bone is the best developing food.

Early laying pullets are money earners. Fresh cut raw bone pushes pullets to early maturity.

Every poultry yard of twenty or more hens ought to have a Humphrey Open Hopper Bone Cutter—the easiest to operate and fastest cutting machine on the market. It will last years. Will more than pay for itself before spring.

Cut your feed bills in half.

Forces hens to lay now when egg prices are highest.

Sell fresh cut raw bone to your neighbors, and start a profit-making business.

Find out more about fresh cut raw bone and why best prepared in a Humphrey Bone Cutter by sending for our book of "Poultry Helps."

Newton Upper Falls, Mass.

structive in building up the poultry interests; while many things have happened that made me admit that perhaps under comparison judging now and then awards could and would have left the awards differently; yet, on the whole, the score card proved more instructive to a greater majority of exhibitors. There are those who hold that comparison is an easier method of making awards. I contend that it is not. That it is more quickly done is true. The responsibility is equally great. By comparison judging defects can and are ignored that by the score card are called attention to and which often affect the awards, which, to the observer from the outside, lead to comments and criticism.

I will cite a few instances that are illustrative of conditions met with under both systems of judging. At the Austin, Tex., state show, where I was called to judge the exhibit some years ago, there were two pens of Buff Cochins, one large, full matured, but in color a shade dark throughout for what is most desirable as exhibition color; another pen uniform, nearly right in every particular as to color, but not so well matured. All were carefully weighed. First fell to the darker pen. This at once caused criticism. Finally one of the critics, also a breeder of this variety, approached me, asked me to point out to him my ideas as to buff color. I took him to the second prize pen, remarking, "They come as near filling my idea of correct buff color, also what I recognize as being required by the standard." "Then why did the awards go as they did?" was promptly asked. Simply because the shortage of weights on second pen did not leave them in position to win. The score card showed a discount for weight, displacing them for first place, and justly placing them where they belonged under standard ruling. Had the show been judged by the comparison system these awards would certainly have been reversed and no special fault found, neither would there have been any criticism. As it was it showed the need of all requirements to be complied with as to standard demands, and justice was done, even though the second prize pen did have the most desirable color. Another case at Salt Lake, Utah, last January. The White Wyandotte display was exceptionally good as to size and quality. The class was scored, cards given to the executive committee to be added and awards made where no ties were to be decided. The first prize pullet was a rather small specimen in comparison to others there, but reached standard weight. In reviewing the exhibit later there must be a mistake, as there were several that looked better to me in the class. But on re-examination and comparing scores and cuts made for defects I let the award stand as made, recognizing that my personal preference as to size must be put aside, thus leaving the specimen win on its merits as shown by the card. Had this exhibit, however, been judged by the com-

parison system I doubt very much if the purity of plumage would have made her a winner. Another case at the same show, first prize Rhode Island Red cockerel, was a specimen correct in size and type, perfect shape and length of back, making him the winner over others by a fraction of a point. The owner of the third prize cockerel (if I remember rightly) asked me to please tell him why his bird did not win, as he could not see any difference only what appeared in favor of his bird. I requested him to look at his score card and he would find his cockerel was cut a half point for back being too short, which tended to make a Wyandotte type. This fault was apparent to him as to me when his attention was called to it. I also suggested he and the owner of first prize cockerel compare their cards and birds and thus practically make a study of both specimens; also consult the standard and make comparisons with descriptions, etc.

Kansas City one year had a comparison show. Working slowly and carefully on the Barred Plymouth Rock exhibit, going over each bird carefully time after time, comparing section after section, spending more time than it would have taken me to score all the class, so that when I placed the awards I had memorized the faults and good points of every specimen that had been looked over as a possible winner for a place. Birds had not been weighed, consequently weight as indicated while handling had to be considered, as it should be in all comparison shows. Later, scoring the cockerels from first to fifth, weighing them but not applying the weight clause, left fifth cockerel with a score of 92, and the first prize cockerel 91½, being up to standard weight, whereas the fifth cockerel, with discount for shortage of weight, would only score 89½. Yet the owner (the editor of a poultry journal) wrote the most severe criticism, withholding the facts as to weights and scores with weights applied, thus casting reflection on the work and method and by misrepresenting fact, causing doubts as to the honesty of the judging. The citation of this case clearly shows a judge lays himself just as liable to criticism under one system of judging as the other, no matter how guarded he may be in his work or desire to do justice. I could cite innumerable cases where the score card nine times out of ten proves the accuracy of judgment, while I do not deny but what under comparison judging the winners can with equal accuracy be placed, but no competitor knows how close or far off he was to the winners only as differences are explained to him.

In judging fall fairs comparison is the only method desirable to work by but in winter when fowls and chicks are supposed to be in full finish of condition and plumage I can without fear of contradiction assert that score card judging will in all our central and western states continue to be in demand in spite of the brazen assertion by a few that it is no longer popular. The fact that New York and Boston shows are comparison shows will not educate the amateur into a knowledge of good, fair or indifferent quality of standard poultry. The greater per cent of poultry breeders are hungry for knowledge. This knowledge must be imparted by a schooling which the fraternity and the greater majority of the American

GLEN EYER POULTRY FARM

New home of King's famous winning strain of Barred Plymouth Rocks have moved over only some select stock. Mating list now ready, gives description of new plant and the very best matings that I have ever bred from. Don't forget my new address.

A NEW DISCOVERY!

"XX" means fertility. Every good egg registers at some point on the scale of "The Breeders' Magic Egg Tester," according to its condition, and this wonderful little instrument tells instantly whether an egg is fertile or not. The scale reads like a thermometer and so easy that any 10-year old child can test the eggs. The fertile eggs register at "XX" and the tester never fails to tell whether fertility is strong or weak.

Read what a well-known poultryman of Western New York says: He tells the whole story.

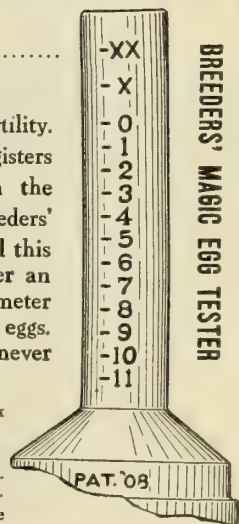

Niagara Falls, N. Y., Jan. 19, 1909.

"Used your Breeders' Magic Egg Tester since Aug. 1908. 100% correct in all kinds of tests. Simply perfect. Invaluable." F. C. Seiler. Breeders' Magic Egg Tester by mail post-paid \$2.00. Write for circular. Demonstrated and sold at Buffalo Agricultural Fair with over 500 sales in the county. Money refunded if not satisfied.

MAGIC EGG TESTER WORKS

Department B.

BUFFALO, N. Y.

Poultry Association, as law makers, recognize as the best method to educate the thousands throughout the United States and Canada.

The following two paragraphs from an able article by Harry B. Orr in the July issue of the Northwest Poultry Journal, Salem, Ore., correctly covers the judging question from a proper viewpoint:

"The two systems of judging do not concern the fancier so much as the judge. If the birds shown by the former are of the right kind he will most assuredly get all he deserves. Some breeders regard the score card

as fact and comparison as fiction even though the same judge presides at both. We wish to state that the guesswork or fiction hinted at is present in both methods only it is not guesswork, but is instead, the headwork of the judge, and his brain pretty near has to work overtime in some cases.

"Truly poultry judging nowadays has ceased to be a sinecure for it involves about as many combinations as a game of chess. There are not many callings that require a sharper intellect, keener

sure you are right and then go ahead.' Do your part and expect the same from the other fellow."

D. T. Heimlich.

J. F. VanAlstyne, Niverville, N. Y., breeder of Columbian and Silver Wyandottes, made several entries at the late Madison Square Garden Show, but owing to the serious illness of his little girl, was unable to either send his birds or attend the show, which accounts for the coops bearing his numbers in the catalogue, being empty. We are pleased to report, however, that his little girl is rapidly recovering from her late illness and Mr. Van-

ONLY \$300

For An

INCUBATOR

200 EGG SIZE

There's all the difference in the world between our simple plan of hatching and the complicated machines that give constant annoyance. We take the short cut on heating, ventilating and regulating by having a hen to do it all in

Siems' Natural Hen Incubator

Patented in United States and also
Patented in Foreign Countries

The hen has the hatching instinct. She does not make mistakes—there is no danger that the eggs will not be properly aired or turned or heated and moistened. That's the reason we use the hen. Siem's patented Natural Hen Incubator gets better results (for everybody) because an actual living hen controls everything from start to finish.

SEE WHAT YOU GET FOR YOUR MONEY

Bigger hatches, better, healthier chicks, greater certainty, no running expense, practically no attention, no danger. And the first cost less than a fifth of other incubators.

We Want Agents. Every chicken raiser, little and big, is a possible customer. Buy one for yourself, then sell to your neighbors. Fill out the Coupon and send in for catalog, or write a postal for it. Do it now and don't buy any incubator till our book comes. Address

Diseases of Poultry

BY

D. E. SALMON, D. V. M.

Chief of the United States Bureau of Animal Industry

Every poultryman should have this book in their poultry library. It contains 250 pages, and every disease to which fowls are subject is treated in a most thorough manner. The cause, symptoms and cure of each disease is put before the reader in such a manner as to be understood at a glance.

With this book in hand you can be your own poultry doctor. Better order one now and not wait until your fowls become ill.

THE PRICE IS ONLY FIFTY CENTS

Will send this book and American Poultry Journal one year for only 75 cents. Send all orders to

American Poultry Journal Pub. Co.

The Ideal

INCUBATORS and BROODERS

Miller Gives You the Key to Success

I've sold so many thousand Ideal Incubators and Brooders that I feel every poultry raiser must be acquainted with them. But here's the all-important question with you: Are you using them? Are you getting the big hatches which only the Ideal Incubators can give you?

And are you succeeding in raising big, strong fowls—and raising 90% of all you hatch—like the users of Ideal Brooders are doing? If not you are suffering a distinct loss.

My poultry raising friend, I cannot afford to misrepresent things to you, but I want to say that there is more profit in the poultry business for you if you use Ideal Incubators and Brooders.

Try The Miller Way This Year

Send today for my great new book, "Poultry For Profit." It will show you what others are doing and open your eyes to what you ought to do in poultry. It's a great book for poultrymen—the best and most reliable ever written. It is not a book of theories, but a book of facts.

**Get Miller's
 Great Book,
 "Poultry
 for Profit"
 SEND NOW**

The Great Book—Worth Dollars To You—Is Free

The illustrations of fine poultry and up-to-date appliances would make it worth dollars to any poultryman if he had to buy it. It tells all about my famous Ideal Incubators and Brooders and gives you a world of practical information besides. Don't hesitate—send for it and do it now. 128 pages, free and postpaid for a postal card. Address—

DANDY GREEN BONE CUTTERS

If you have no bone cutter, or if the one you have isn't satisfactory let us send you a "Dandy" Green Bone Cutter on 15 days free trial—without a cent in advance.

We believe that every poultry-raiser with ten hens or more should have a good bone cutter. We make the "Dandy" in sizes to suit all needs.

Cut Green Bone will make every hen more productive; it makes chicks grow faster; it keeps fowls healthy and in the pink of condition.

No addition you can make to your poultry business will earn you so much money as a "Dandy" Green Bone Cutter.

A great many poultry - raisers have never fed fresh cut green bone. They have read about it and think it may be so, but they don't know. A great many more have tried stuff sold

as cut green bone, but results didn't satisfy them and they are doubters. But no man or woman ever fed fresh cut green bone who was not enthusiastic over it. Why? Because fresh cut green bone is a natural food for fowls; it supplies what their appetites crave—the fat bug and the juicy worm. Penned-up poultry cannot get bugs and worms in sufficient quantities to satisfy them, consequently you must supply a substitute. Cut green bone is the only substitute known—it is the bug and worm in a different form, and is the best and cheapest chicken feed in the world. It costs you practically nothing—it is made from scraps that would be thrown away, but which the "Dandy" quickly turns into money for you.

Write today for free catalog, select the size you want and send us your order to ship it at once on 15 days free trial.

STRAITON MFG. CO., Box 17, ERIE, PA.

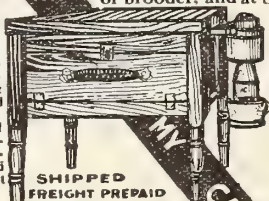

\$5 AND UP

I WANT EVERY POULTRY RAISER TO WRITE FOR MY SPECIAL PROPOSITION

Get my offer on a Fairfield incubator or brooder before you buy any other make of machine. I will help you get an incubator or brooder free. Doesn't that sound interesting? I am making absolutely the fairest and most liberal offer ever made by any incubator manufacturer, to help introduce the Fairfield in every section of the United States. Just write me for my new illustrated catalog and I will mail you my special proposition at the same time. I want every poultry raiser to write me for this offer, because I can save you money on my incubator or brooder, and at the same time will give you the chance

of getting your machine partly or entirely free. This is no soliciting, canvassing or agency offer, but a straight business proposition requiring about ten minutes of your time. I wouldn't make the offer under any conditions unless I knew I had an exceptional machine to back it up. Remember, I will leave it to you to say whether or not the Fairfield's machine you want to buy. Write me today for my catalog and special offer.

SHIPPED FREIGHT PREPAID

JUST A WORD TO CHICKEN RAISERS

Don't kill the goose that lays the golden egg by setting your hens to hatching. Buy an incubator this year. Let it hatch your chickens and keep your hens at the more profitable work of laying. My largest machine will do the hatching of 30 hens better and cheaper and it's a lot easier to watch.

FAIRFIELD INCUBATORS AND BROODERS ARE SOLD DIRECT FROM OUR FACTORY TO YOU AT A SAVING OF 30% TO 50%.

I don't doubt but what you have been thinking of buying an incubator or brooder, perhaps both, for a long time. Probably you are hesitating simply to be sure you get the best machine for the money. Now, if that's the case, I say just try a Fairfield first. You can't make a mistake, for if the machine, under my liberal, iron-clad guarantee don't suit you, it won't cost you one cent.

I ship my incubators and brooders out on the plan that if you don't find them all that I claim for them or perfectly satisfactory, return them and I will refund your money and pay the freight both ways. This is the only fair way. But my machines are bound to please you. The steam and water forced circulation heating system, the most important part of an incubator is perfect in the Fairfield. I guarantee it. Remember, an incubator without a good heating system regardless of other fine points is absolutely worthless. It simply can't hatch.

The Fairfield will hatch every hatchable egg. It is better made than any other incubator on the market. Try one and prove this for yourself. Our regulator could not be improved—works automatically and keeps the temperature always at hatching point. Box is made of California redwood throughout, beautiful in finish, makes a fine parlor table. Another important feature is our non-explosive lamp. We have never had nor heard of an accident with a Fairfield lamp, with thousands in use everywhere.

Our brooders will make good hen mothers for the chicks which a Fairfield will hatch. They are well built, simple, cheap, and can be set out in the open air. We guarantee our brooders and ship them out on the same liberal offer made on our incubators.

You need both machines and, remember, my new plan will help you get them very easily and very cheaply. Write for my catalog and special offer today sure.

S. C. Thompson, Manager, Nebraska Incubator Company, 217 MAIN STREET, FAIRFIELD, NEBRASKA.

Remember they are shipped FREIGHT PREPAID to any point in U. S. and Guaranteed.

The Sign
of
Satisfaction

QUANTITY has made the Sharples Separator Works the largest factory of its kind in the world. Quality has made the sale of Tubular cream separators greater than that of any other separator. Quality will be found in every part of the 1909 Tubular "A" separators and will place Tubular cream separators still farther in the lead.

Tubular "A"

We wish every dairyman who reads this could come to our factory and see for himself the difference between Tubular "A" separators and other separators, thousands of which come to us each year in exchange. We would like to demonstrate to every dairyman the many points of superiority in Tubular "A" separators, a few of which we mention below:--

**Perfection in skimming,
 Extreme simplicity of construction,
 Remarkable ease of cleaning,
 Most convenient oiling arrangement,
 Low, convenient milk supply tank,
 Freedom from complicated bowl parts,
 And twenty other especially desirable features.**

Our free catalog No. 205 will tell you all about it. Ask for it.

"Sun" Chick Starter

A primary Grain Food for Baby Chicks during first 20 Days

The success of your broods, from the moment they are out of the shell, depends on the feed you use. Dickinson's Chick Feeds are the kind you can depend on.

In addition to choice, re-cleaned, cracked grains and seeds, "Sun" Chick Starter contains steel-cut oatmeal, fine granulated bone and fine charcoal. The mixture, which is prepared under the direction and supervision of leading poultry experts, has no equal in promoting healthy and rapid growth. Hundreds of enthusiastic poultry men will tell you that "Sun" Chick Starter guarantees life, health and beauty and future layers.

Dickinson's Poultry Feeds

will increase your profits this year. They offer highest results with greatest economy.

Crescent Chick Feed

is especially prepared for chicks from three to eight weeks old. The materials and proportions are similar to the "Sun."

Globe Scratch Feed

for growing and full-grown fowls, is the best balanced ration to keep hens healthy and to increase egg production.

We also make "QUEEN" Poultry Mash, a ground feed for fowls, and "KING" Pigeon Feed, for Squab fattening. Ask your dealer for any or all of Dickinson feeds. If he does not carry them, write us and we will see that you are supplied.

THE ALBERT DICKINSON CO., Seed Merchants, CHICAGO, ILL., MINNEAPOLIS, MINN.

\$7.55 Buys the **140-Egg**
Best **Incubator** Ever Made

\$4.50 Buys the Best Brooder

Both Incubator and Brooder, ordered together, cost but \$11.50. Freight Prepaid to your Station

Our Belle City Incubator will hatch more chicks, under the same conditions, than any other incubator, else your money will be refunded. This I guarantee. It has double walls and dead-air space all over, copper tank and boiler, hot-water heat. The best self-regulator, deep nursery, strong egg tray, high legs, double door. Thermometer, egg tester, burner and safety lamp included.

We ship quick from St. Paul Buffalo Kansas City or Racine

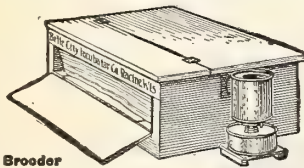

The Belle City Brooder is the only brooder having double walls and dead-air space. I guarantee it to raise more chicks than any other brooder made. Hot-water, top heat, wire yard, platform, burner and metallamp.

A Complete Hatching Outfit for Only \$15.50

Our book, "Hatching Facts" explains these remarkable prices. Write for it today, or send your order now under my personal guarantee and save delay. Satisfaction guaranteed.

J. V. ROHAN, Pres.

Belle City Incubator Co., Box 27, Racine, Wis.

THE INOVO EGG THERMOMETER

is so constructed that it

averages the top and bottom

temperatures, and will

give you the exact temperature

of your eggs. No other thermome-

ter comes within several degrees of doing this.

Recommended by the Prairie State Incubator Co., The Ohio Hatchery, and such well-known experts as L. H. Baldwin, of Toronto; W. W. Kulp, of Pottstown; and is in use in many of the Experimental Colleges in the United States and Canada.

"Represents a distinct advance in the art of incubation."

—L. H. BALDWIN.

"A vast improvement for all incubators that are accustomed to use a hang-up thermometer."—J. L. NIX, Manager of Prairie State Incubator Co.

H. L. WAGNER, 429 King St., Pottstown, Pa.

FEED - 10 CENTS PER BUSHEL

Is your main feed for growing chicks and making eggs costing you more than 10 cents to 15 cents per bushel? Do you expect to raise 95% of all chicks hatched this season? Can you care for 2,000 layers and raise 3,000 chicks without help and have time for other work? If not, you want my system. Visit my plant and see how

I do it. My new book, "Profits In Poultry Keeping Solved," will tell you how to do it, as well as save you \$25.00 on every 100 chicks you raise to maturity. My third edition or 5,000 copies now ready. 2,000 breeders—W. Wyandottes and S. C. W. Leghorns—managed by my famous system. Eggs for hatching a specialty by the 100 or 1,000 lots at \$5.00 and \$6.00 per 100. No order too large. High grade baby chicks also supplied—particulars free.

Send today for free circulars and testimonials. Address

Keep Your Hens Laying

When Eggs are Worth Most

CUT down your feed bills and at the same time **get more eggs.**

Thousands of the most successful poultry raisers are doing it and **doubling their profits.** You can do it, too.

By feeding fresh-cut raw bone—such as you get from the butcher's block.

Here's the Reason of It:

Hens **can't** lay unless they have food which is rich in protein. Grains contain but little protein, but all **animal life** is rich in it. In summer, fowls get plenty of protein in bugs and worms and insects. In winter

you must supply it.

Fresh bone gives it to you in its most **useable form** and at the **least cost.** An ounce of fresh bone contains more protein than

a quarter-pound of grain. And it costs you practically nothing.

Raw bone not only **makes hens lay**, but it improves the conditions of the entire flock—makes eggs more fertile—makes bigger hatches—livelier, stronger chicks—develops earlier layers and broilers—makes heavier market fowls and puts **more money into your pocket.**

You cannot afford to pass such a money-saver and money-maker for you. You can't get the best results without it. It means a **saving** in grain and an increase

in yield—a healthier flock and bigger profits. But don't confuse fresh-cut, **raw** bone with so-called "beef scraps," from which most of the nutrition has been removed by the process of preserving. It's the **raw, live** worm that the hen likes—not the dried up one.

It is fresh, raw bone that does the work—not dried "beef scraps" nor "bone meal." Raw bone may be obtained for almost nothing from your butcher, and it is easily and quickly prepared with

Mann's Latest Model Bone Cutter

—the only bone cutter made that does the work in a thoroughly satisfactory manner. We want you to try this machine. You don't have to buy it unless it suits—just try it first. To prove to you what it will do, we will send you any one you select from our catalog on

10 Days Free Trial

(No Money in Advance)

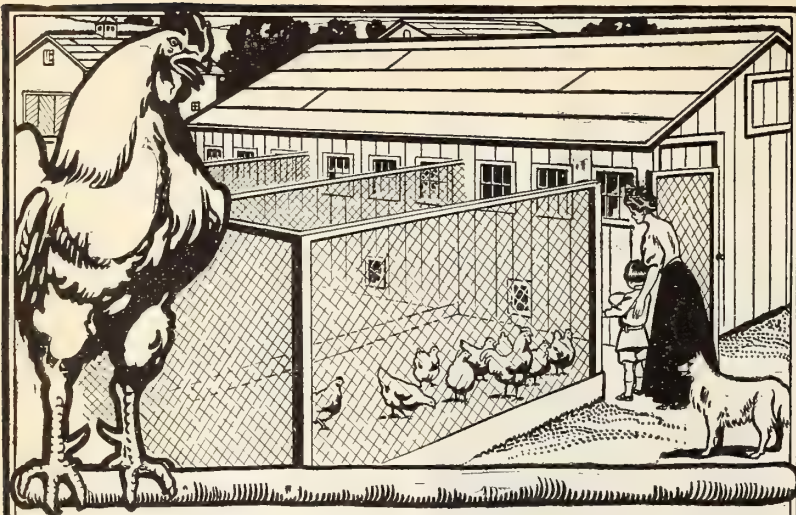

It cuts all bone with adhering meat and gristle, never clogging, and wasting nothing.

It automatically adapts itself to your **strength** so that any one can use it. It is strong, durable and does not easily get out of order. **But try it!**

Send Today for Catalog—select the machine you want to try—we'll do the rest.

F. W. MANN CO., Box 56, Milford, Mass.

Every successful poultryman or farmer ought to be interested in roofing because every building needs a good roof.

There are so many different kinds, prices, and claims made for roofing you should know why PAROID ROOFING has been the standard for so many years.

Since 1817, over 90 years, we have been making paper and felt. More than twenty years ago we made the first complete ready roofing and a few years later we first made PAROID.

We make PAROID from start to finish ourselves—the felt which has been one of our specialties we make from the best stock. We thoroughly saturate and coat this strong felt with a special preparation so that every fibre is made proof against water, wind, heat, cold, and all climatic changes.

PAROID outlasts all other ready roofings because it is better made—the best, toughest, most durable felt, with a lasting, flexible saturation and coating.

Even our caps and nails are better than the ordinary. We make them ourselves from new metal. Being square they have more binding surface than the ordinary round cap. We make them as near rustproof as possible by a special process. Each roll of PAROID contains sufficient of these special caps and nails, cement and complete directions for laying. Anyone can lay PAROID. It is the easiest and least expensive to put on your roof.

PAROID ROOFING

makes an attractive roof, it resists fire, will not taint rain water, buckles less than any other ready roofing, unaffected by water, wind, cold, or heat.

When you use PAROID ROOFING you run no risk because we stand back of every roll we make. Send for free samples of PAROID and plan book, "Practical Farm Buildings."

Ask the opinion of the man who has used PAROID or write for name of nearest dealer who has sold PAROID for years, to satisfied customers.

F. W. BIRD & SON, 181 Mill Street, E. Walpole, Mass.

If you require only a temporary roofing ask about NEPONSET RED ROPE ROOFING

Save $\frac{2}{3}$ Expense With An

-RAY Incubator

Only Perfect Ventilation—Perfect Hatches
Price Right—60 Days Trial—Guaranteed

The one incubator that is ahead of the times—the only real invention in years. Don't buy any incubator until you have sent us your name and address for our Free, Practical X-Ray Incubator Book—a book of real facts. Then you'll know why the X-Ray is no different from all other incubators—lamp underneath where it should be—no filling makes the hatch—all others you have to fill daily—saves you $\frac{2}{3}$ expense on oil and time.

Write Postal for Big FREE BOOK.

Find out why the X-Ray is the only safe, sure incubator to use. Famous X-Ray Tubes make best heating system—glass top enables you to see eggs, chicks, thermometer, at all times—flame regulates automatically—no waste heat—don't have to remove egg tray during a hatch. You'll appreciate why the X-Ray has revolutionized the incubator business—why it is the only perfect incubator to use and to hatch. Just write us—Our Practical Free X-Ray Book Proves Facts.

The Peerless "Ringlets"

True to Their Tradition,

Are Again Great Winners at New York

At the Imperial Madison Square Garden Show,
December 29, 1908, to January 2, 1909,

E. B. Thompson's Barred Plymouth Rocks

win First and Third and Special Prizes on Exhibition Pens; second and special prize Cock; second and special prize Cockerel; numerous specials on hens and pullets, and the Harding \$50 Challenge Silver Cup offered for best exhibition pen.

The race at this 1909 New York Show was a Marathon for speed and quality, and my First Prize Silver Cup Exhibition Pen was declared by expert opinion to be the finest ever exhibited---a paragon of perfection---and created a sensation as the finished achievement in modern Barred Rock breeding---unequalled in the annals of poultry shows. The sun never before shown on such a masterful exhibit.

The "Ringlets" are always imitated---but never equalled

They are first in record, first in quality, and

first in popularity

Their record at New York for 22 years is **GOLD LINED**

—it is a calendar of successive victories demonstrating step by step their irresistible advance towards the world's absolute leadership

"RINGLET" EGGS ARE THE BEST THAT MONEY CAN BUY; THEY PRODUCE PRIZE WINNERS AND WILL MAKE YOU MONEY

Mr. E. B. Thompson,

Dear Sir:—Our poultry show has just closed and I am now ready to report the success I had with the chicks hatched from your "Ringlet" eggs. I hatched 17 chicks and succeeded in raising all of them. I entered nine birds in the show, five cockerels and four pullets, and won eleven ribbons, winning 1st, 2d, 3d and 4th prizes on pullets, 2d, 3d and 4th on cockerels, special prize for best colored male, special for best shaped female, special for highest scoring female, and first prize on exhibition pen. I am greatly pleased with the results and want to be entered as one of your regular customers.

Yours very truly,

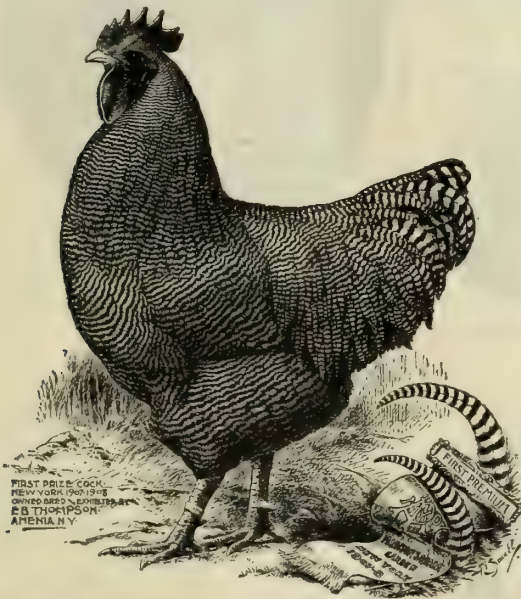

H. L. Radebaugh.

Walworth, Wis., Dec. 12, 1908.

Elegant breeding and exhibition birds for sale in any number, and you may have the product of my skill gained by 30 years' experience at reasonable prices. Your wants will have my very best and personal attention. Eggs from the World's finest exhibition matings: One setting \$6; two settings \$11; three settings \$15; four settings \$18. Richly illustrated 50-page catalogue upon application; it is full of original pictures of New York winners from life.

Strongest Fence Made

When you buy our **High Carbon Coiled Spring Fence** you buy strength, service and durability combined. Twenty years of experience—hard knocks, taught us that the best fence is made from heavily galvanized **Coiled Spring Steel Wire**

CLOSELY WOVEN FROM TOP TO BOTTOM

Our Fence is so closely woven that small pigs cannot "wriggle" through it. So strong the vicious bull cannot "faze" it. We have no agents and do not sell to dealers but sell direct to the user.

AT WHOLESALE PRICES FREIGHT PREPAID

Coiled Wire provides for expansion and contraction and prevents sagging between posts. Every pound of wire used in the construction of our fence is made in our own mill from the best high carbon steel obtainable. We give

30 DAYS FREE TRIAL that our customer may be sure they are satisfied. We make a full line of **FARM AND POULTRY FENCE**. Our wholesale prices will save you money. Catalog Free.

COILED SPRING FENCE COMPANY
BOX 82 WINCHESTER, INDIANA.

"CHICK CULTURE"

How To Raise Them? That's the question!

Nearly every person can hatch chicks with hens or an incubator, but very few can raise the chicks. Very few know how to get them through the chick period to the dollar bringing time. Very few know how to make money by raising poultry. But there is big money in poultry and we can tell you how to get your share.

"CHICK CULTURE"

Dr. A. A. Brigham, the acknowledged poultry authority, has written a wonderful book, entitled, "Chick Culture." It covers everything from the egg to the mature fowl. It tells among other things how to hatch chicks successfully; how to quickly develop them; what to feed them and how to feed; how to construct serviceable, inexpensive houses and furnish them at little cost. It is plainly written, easily understood. It is full of practical poultry knowledge from cover to cover.

Invaluable to any one who will follow its practical teachings. A full size book which thoroughly covers the subject of chick culture from beginning to end.

BIG SPECIAL OFFER

\$1.75 and "Chick Culture" For \$1.00

POULTRY HUSBANDRY is a leading poultry monthly magazine, edited by men well known to the profession, and contributed to by leading experts. It is always well-printed and profusely illustrated. A year's subscription is 50 cents.

FARM PRESS is published monthly, 160,000 copies and edited for the farmers all over America. Every farmer, big or little, should read Farm Press. Its many departments make it interesting to every one on the farm. One year, 25c.

GREEN'S FRUIT GROWER, a high grade monthly magazine for the fruit growing farmer and his family. Owned and edited by Charles A. Green, one of the greatest horticulturists of the day. One year, 50c.

VICK'S MAGAZINE, for over 30 years has been recognized as one of the leading family journals. It goes to over 100,000 homes every month. Every issue is a special number and its several departments are always of interest to every member of the arm family. It especially appeals to the women and young folks. One year, 50c.

"**CHICK CULTURE**", the great poultry book, needs to be seen to be fully appreciated by the poultryman who needs help and advice with his chickens. It covers poultry raising from A to Z. Its information is clearly told and logically arranged so as to be easily found. "Chick Culture" is worth a gold dollar to every poultry raiser, even if he has only a very small flock.

SPECIAL NOTICE

An arrangement has been made which admits of the above liberal offer being made the readers of this publication. It means that you will receive for the low price of \$1.00, one of the very best poultry papers in the country, a high grade farm paper, a horticultural, and a home magazine, all for one full year, and a copy of Dr. Brigham's book "Chick Culture." This is one of the most liberal offers ever made. Take advantage of it now. Send remittance of \$1.00 in any convenient way to

Hawkins Publishing Company, Dept. A1 Waterville, N. Y.

P. S. The above special offer is open to our old subscribers to **POULTRY HUSBANDRY** as well as new ones. Send us your order at once and we'll advance your subscription one year.

Get Rid of Roup!

Here's How:

There's just one way—the Conkey way! Get a package of Conkey's Roup Cure and put a thimbleful of the remedy in the drinking water! Let the sick fowls drink all they want! Even if they have reached the "blind" stage, it's not too late! You thrust their heads into the solution a moment and in their efforts to breathe they will get enough to cure them. Results are quick and sure. This great remedy is doing more to wipe out the dread disease of Roup than all other so-called "Roup Cures" put together.

Conkey's Roup Cure

Does the Trick—or Your MONEY BACK!

If you buy a box of Conkey's Roup Cure and it fails to make good, we refund your money on receipt of the empty box! You get the cash by return mail and no questions asked. Conkey's is the original and only genuine Roup Cure. Used with unvarying success in every civilized country. Read these letters from users:

50c Saves Him \$50.00!

Your Roup Cure is the finest thing I ever saw. I believe that every 50c package I buy saves me fifty dollars in birds. Always recommend it to everyone.

C. W. FOWLER,
Breeder of Buff Plymouth Rocks,
Smyrna, Georgia.

Valuable Birds Saved!

Your Roup Cure has saved me many valuable birds this winter. I have not lost a case. The best remedy of its kind that I have yet found.

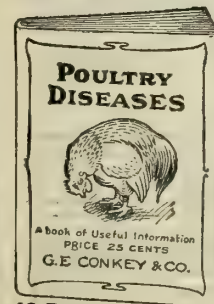

E. M. TAUTPAUS,
Idaho Falls, Idaho.

Far Ahead of Others!

Find money order for \$2.00 for two large size packages of Conkey's Roup Cure. I have used it for six years and would not do without it. It is far ahead of any other I have seen.

W. N. SMITH,
Breeder Barred Plymouth Rocks,
Ohio, Ill.

One 50c Package Makes 25 Gallons of Medicine

48 Pages

Send 4 cents postage and name of the man from whom you buy your poultry supplies. You'll get the book by return mail. Write now—at once. Address

**G. E. CONKEY CO., Dept. F Conkey Laboratories
Cleveland, Ohio**

Conkey's Roup Cure comes in powder form. A 50c package makes 25 gallons of Roup Cure. A germ killer. A preventive. A tonic. At trifling cost you can cure hundreds of sick fowls. If fowls are healthy, keep them so by the occasional use of this wonderful preventive and cure. You never know when the Roup Epidemic may reach your yards! It pays to be on the safe side! If your dealer cannot supply you, order direct from us. Price 50c and \$1.00, postpaid. We make one remedy for each disease.

Free! Conkey's Great Book on "Poultry Diseases"

LAWN FENCE
Many designs. Cheap as wood. 32 page Catalogue free. **Special Prices to Churches and Cemeteries.** Coiled Spring Fence Co., Box 408 Winchester, Ind.

A SAVING Of One-Half
on your poultry fence by using a lesser number of posts and no top or bottom rails. A 4-ft. fence without top rail is as good as a 6-ft. fence with top rail.

M.M.S. POULTRY FENCING saves 50%. It will not sag or bag, has 1 1/2-inch mesh at bottom. A cable every foot in height, giving additional strength. Write us, we will tell you about our poultry, field, hog and lawn fence; also our **Ranger Humane Revolving Barb Wire.**

Write us and say, "Send me your free Fencing Catalogue No. 1437 (also ask for our special Catalogue of Incubators and Poultry Supplies), and you will get everything by return mail."

SEARS, ROEBUCK AND CO. CHICAGO

Page Fence Used by the Government as the Official Standard of Quality

In seeking bids on wire fencing for Government Parks, Military and Indian Reservations, Uncle Sam demands "Page Fence or Equal." Many foreign governments have added their endorsement. Over 800,000 American farmers testify to its durability, economy and splendid service.

Page Fence

Now Celebrating "Jubilee Year" or Quarter-Centennial

If you buy Page Fence now you'll be getting the benefit of a quarter of a century of experience in fence making. This is something you can't get in any other fence. The posts may rot, but Page Fence will retain its strength and springiness unimpaired. The wire is of that special quality of steel known as High-Carbon, Basic Open-Hearth. It is coiled "for keeps" and will never lose its marvelous elas-

ticity, though stretched straight thousands of times. Page Fence carries its own Insurance Policy in the form of a heavy coat of galvanizing. It is tightly woven with a Triple Knot that no strain can ever loosen. Made in many styles, for all purposes. Each fence the best in its class. Write for "Jubilee Edition" of Page Fence Book—FREE.

PAGE WOVEN WIRE FENCE CO., Box 58H, Adrian, Michigan

WARD POULTRY FENCE.
Old fashioned 40-carbon elastic spring steel wire. 30-days free trial. Best and strongest. Turns Stock as well as Poultry. Send for free catalog No. 57A. Address **The Ward Fence Co., Box 284 Decatur, Ind.** — Also manufacturers of Ornamental Wire and Ornamental Steel Picket Fence.

SAFE BROWN HEAVY WEIGHT POULTRY FENCE

Does Not cost one-half as much as the Common Chicken Netting, yet will last five times as long.

Size of Wires. The top and bottom wires are No. 9 gauge—same size as nearly all stock fences. Intermediate and stay wires in same proportion.

Quality of Wire. All material used in Brown Poultry Fence is best grade of High Carbon, Double Strength Spring Steel Wire. The galvanizing is the heaviest and best possible. All wire is subjected to careful inspection and acid tests before being made into fence.

Construction. Very closely woven, and a sure protection against marauding animals. Your poultry is safe from everything when enclosed with Brown Fence. Built of material heavy and strong enough for horses and cattle. Wires cannot possibly slip.

Saving in Cost. With a No. 9 top and bottom wire you can save at least one-half the posts, and besides you require no top railing or bottom boards. These items alone usually cost more than the fence.

Price. Our prices are less than common netting costs. WE PAY THE FREIGHT and guarantee safe delivery to your nearest railway station.

Guarantee. We guarantee every rod of our Poultry Fence. Every customer who buys this fence and does not find it entirely satisfactory and fully up to his expectations is at liberty to return the same at our expense.

Before buying Poultry Fence get our catalog and investigate the many superior qualities of our fencing. We have 150 styles of fencing—a fence for every purpose. Write today.

MY BOOK SAYS just exactly what I'd say to you if I could come down where you are and talk to you, or if you could step in here and visit me at my home—and in my big factory next door where I've got over 400 friends of mine here in Clay Center helping me make Old Trusties. I call it—

My "Big Letter to You" of Over 200 Pages and Over 1200 Pictures

All type matter is real chicken-raising experience. All pictures are actual photographs. No "artist's dreams."

Just photos taken by me and my camera. (I use a Kodak all the year 'round to get snap shots of the real things that happen in chicken raising to show my friends and help prove to them what they also can do).

Also hundreds of mostly new photographs, big and little, sent me by my friends from all over the United States and many parts of the world show you what you, too, can do. And I want to tell you that when you open up this book of mine this year, in a few days from now when you get it, you'll sit up all evening and just say it's the best reading you've found for a long time—on Chicken Raising.

Then too my price is lower to you this year—

Below \$10 Complete—freight all paid to your station east of the Rockies and no worry about it. Also Prompt Shipments.

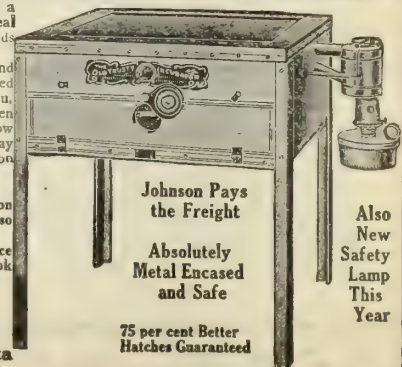

Let me write you personally and tell you my price to you and send you my Big New 1909 Poultry Book Free. Will you? Write me—

When Fresh Eggs are Scarce and High

That's the time when there is money in having busy hens—hens that are laying while other hens are loafing, for it's the fresh-laid eggs that always bring top prices. You can keep your hens busy laying eggs the whole year round by giving them

Pratts. POULTRY REGULATOR

(For 37 years called Pratts Poultry Food)

It not only increases the quantity and quality of the eggs, but it improves the condition of the entire flock. The result is more fertile eggs, bigger hatches and healthier chicks.

If you want to get the benefit of the full earning-power of your hens, get Pratts Poultry Regulator and give it to your fowls today. It will add to your cash returns without increasing your cost.

Get Pratts Poultry Regulator of your dealer. If he does not carry it, write to us and we will see that you are promptly supplied.

Write us for Pratts new Poultry Book, Free

Lloyd C. Mishler, North Manchester, Ind., breeder of Rose Comb Black Minorcas, has just issued a very neat 12-page folder, giving a list of surplus birds which he wishes to dispose of at prices that are exceptionally low, when quality is considered. Write for a copy and mention American Poultry Journal.

If you want to save money on your purchase of fence write Kitzelmann Bros., of Muncie, Ind., for their free catalogue. They are selling fence direct to the farmer on 30 days' trial for 15 cents a rod up. See their ad in this issue.

THE NATURAL HEN INCUBATOR AND OTHER INCUBATORS.

Incubators are not all alike. There is at least one that is radically and totally different from all others.

There is located at Los Angeles, Cal., the Natural Hen Incubator Company. This company has the proud distinction of designing and selling to poultry raisers throughout the United States, and in foreign countries, the "incubator that uses the hen." It is an incubator that costs but \$3. It will thus be seen that it is totally different from all other incubators in design. There is a wide departure from all others, also in price. The \$3 gets the 200-egg size incubator.

This Natural Hen Incubator (correctly named because it actually uses the natural hen in the hatching process) is not a new thing. It has been going on for a number of years. It is now, and for a number of years has been, advertised in this paper. It was formerly located at Columbus, Neb., but it outgrew its quarters there and it has now established itself in Los Angeles, from which point Natural Hen Incubators are going to all parts of the world.

The Natural Hen Incubator is the invention of Johann F. Siems, a German poultry specialist whose name and work are familiar to all leading poultrymen. The invention is patented in the United States and foreign countries. Unquestionably it is revolutionizing the old ways of hatching chicks. It is helping all classes of poultrymen. The greatest feature about it is that it makes success as certain for the beginner as for the poultry specialist.

All interested can get specific information at first hand by writing direct to the company at Los Angeles. Look up the advertisement in this paper and get the correct address.

"RINGLETS."

To speak of "Ringlets" is to think of E. B. Thompson, Amenia, N. Y., breeder of Barred Plymouth Rocks. There is probably no strain of any variety of fowls so widely known as the "Ringlet" strain of Barred Plymouth Rocks. Every year Mr. Thompson takes a string of his birds to the great Madison Square Garden Show, and as he says, "picks up a few crumbs" in the way of prizes. At the late show he won 1st, 3rd and special prizes on exhibition pens; 2nd and special cock; 2nd and special cockerel; numerous specials on hens and pullets, and the Harding \$50 Challenge Cup offered for best exhibition pen. Pretty good "crumbs," don't you think?

It is such men as Mr. Thompson that makes possible the great poultry industry of the United States, and makes possible the production of birds with quality and merit to win at the leading shows throughout the country. Look up his three ads in this issue, they will be interesting reading for you. Send for his large catalogue and mention American Poultry Journal.

Sunnybrook Farm, West Orange, N. J., breeders of White and Columbian Wyandottes, won at America's two largest shows, Chicago and New York, as follows: On Columbian Wyandottes at Chicago, 1st and 4th cock; 1st, 4th and 5th hen; 2nd, 4th and 5th pullet; 2nd and 4th cockerel; 1st, 3rd and 4th pen; challenge cup for best display, with 42 points. At Madison Square Garden, New York, on Columbian Wyandottes, 2nd cock; 5th hen; 3rd pen. A few choice breeding and exhibition birds left. Egg orders being booked now. If you want something choice in either of these varieties you should write for their catalogue and mention American Poultry Journal.

The "Maples," Maywood, Ill., breed Rose Comb White Leghorns, the prize winning kind. Won first cock at the great Chicago show in one of the strongest classes. Have some choice year old hens and pullets for sale. Select eggs for hatching at \$2 and \$3 per setting. Write and mention American Poultry Journal.

John F. Woods, of Owensville, Ind., breeder of Light Brahmas, does not show but breeds the good sized, well marked kind that customers can win with. For eighteen years it has been his rule to use none but good ones in his breeding yards.

W. S. Templeton, of Dakota, Ill., won at National Fanciers and Breeders' Association, Chicago, December 15-19, 1908, as follows: 1st and 3rd cocks; 2nd and 3rd hens; 4th pullet; 3rd pen; special for best male. Forty-three in Dark Cornish class. W. E. Stanfield, Jurg.

Fast-color Calicoes

It pays to make dresses of Simpson-Eddystone Black-&-White cottons. The fabric is the highest quality and lasts longest; patterns are the latest and most beautiful designs; and the color remains fast through sunlight, perspiration and washing.

Ask your dealer for Simpson-Eddystone Prints. If he hasn't them write us his name. We'll help him supply you. Don't accept substitutes and imitations.

The Eddystone Mfg. Co., Philadelphia
Established by Wm. Simpson, Sr.

Three generations of
Simpsons have made

Barker's Lt. Brahmas

are sure winners. We can furnish you some splendid cockerels and a few cock birds at reasonable prices—quality considered. Eggs after March 1. Price \$5.00 for 15. Send for catalogue.

AURORA, Cayuga Co., N. Y.

There's Only One Real Poultry Food

ONLY

Mrs. D. M. Bateman, R. R. 4, Ogden, Utah, writes:
 "A short time ago I endeavored to purchase Lee's Egg Maker from an Ogden merchant, but he was out of it and persuaded me to try..... but I might just as well have fed my fowls so much sawdust for all the good it did them. Have used a great many different kinds of poultry food and the more I try the more firmly I am convinced there is only one **Real Reliable Egg-Producing Food**, and that one is **LEE'S EGG MAKER.**"

Don't allow your dealer to impose on you with the "just as good" kind that nets him a larger profit and don't give results. Use Lee's—the result of 20 years actual tests and experiments by practical, successful poultry raisers. The feeding cost of our product is small, the guaranteed returns great. Consequently you shoulder no risks.

Lee's Egg Maker

Lee's Egg Maker is largely granulated blood (deodorized), the most highly concentrated form of meat food, one pound of which is equal to 16 pounds of fresh beef.

It is rich in protein—a natural poultry food that not only insures a maximum egg-production but makes fowls stronger, healthier and more profitable. **Buy it on our guarantee of an increased egg-production at a reduced feeding cost.**

Prices: 25c to \$2.00 according to size.

GEORGE L. LEE CO., Sole Mfrs., 1134 Harney St., Omaha, Nebr.

SPECIAL INCUBATOR OFFER.

We want to call attention of every reader of this paper to the special offer being made by Mr. S. C. Thompson, manager of the Nebraska Incubator Company, of Fairfield, Neb., on page —.

This company has been manufacturing incubators for several years past and we know them to be thoroughly reliable and square in their dealings.

Mr. Thompson, who is manager of this company, is coming out today with a special proposition on the Fairfield incubators and brooders that should interest every reader of this paper.

His offer will help any one to get an incubator or brooder partly or entirely free. It is a straight business proposition that will pay you to investigate.

We believe all poultry raisers appreciate the advantage of getting a good incubator or brooder like the Fairfield at as low a price as possible.

Why not write to Mr. Thompson today and see what he has to offer on his incubators and brooders. He sells them direct from his own factory at a saving of 30 to 50 per cent, freight prepaid to any point of the United States.

They are exceptionally well built machines of the steam and water heating kind. They are beautiful in finish; durable in construction; easy to operate; easy to understand.

Mr. Thompson sells them on the guarantee that if the customer buying is not satisfied he can return the machine and get his money back. Write Mr. Thompson for his catalogue and special offer today.

UNWISE ECONOMY.

Oftentimes farmers save a mite by buying nursery stock of some traveling agent or irresponsible mail-order dealer; but there is a big risk in doing that.

Fruiting time may bring great disappointment. It is better to order nursery stock of a well established nurseryman. W. N. Scarff, New Carlisle, Ohio, has been before the fruit growers of the country for years and has established a reputation.

"Scarff Bearing Strains" of blackberries and small fruits earn \$300 or more per acre.

If you write for Mr. Scarff's catalogue and ask him, he will enclose a well-rooted plant, of Fairfield, Neb., on another page.

George W. Hillson, Amenla, N. Y., the well-known Barred Plymouth Rock breeder, exhibited a fine string of birds at the late Madison Square Garden Show and won several prizes. We had the pleasure of handling a number of his birds and feel safe in saying that the barring and color were as good as can be found anywhere, and his winnings at this show proves that he knows how to produce the good ones. Mr. Hillson is not a novice at breeding Barred Plymouth Rocks, as he has been at it for the past fifteen years and has produced the winners at the leading shows throughout the country. A trial will convince anyone that he has the quality. Better send for his mating list and secure a setting of eggs from his prize-winners and be in a position to win at your show next season. In writing him mention American Poultry Journal.

Editor American Poultry Journal.

Dear Sir: During the summer of 1908 and so far this season my sales of "Ideal" trap nest plans and specialties have exceeded those of any previous year, and I have been "at it" since 1900. I have made sales in practically every state and territory and in Canada, Cuba, Mexico, Australia and Hawaii. F. O. Wellcome, Box J, Yarmouth, Me., inventor of the "Ideal" trap nest.

Simon Beuth, German Valley, Ill., breeder of Buff Plymouth Rocks, is prepared to book and ship all orders for eggs from the best matings he has ever had. Mr. Beuth's strain of Buff Wyandottes is so well and favorably known that it is unnecessary for us to comment further on it here. Read his ad on outside back cover page and send for his large catalogue. Mention American Poultry Journal.

H. W. Halbach, of Waterford, Wis., Box A, won at National Fanciers and Breeders' Association, Chicago, December 15-19, 1908, as follows: 1st and 4th cockerel; 2nd, 4th cock; 1st, 3rd, 4th pullet; 2nd, 4th, 5th hen; 1st pen; special best display; American Poultry Association diploma for best male under 1 year old. James Tucker, judge, White Plymouth Rocks.

GOOD FAITH OR GRAFT.

By Otto Barth, Lincoln, Neb., Sec'y
Queen Incubator Company.

Anent the article appearing in many poultry journals for December, under various titles such as "Benefit to the Poultry Industry," "It Has Come at Last," etc., there seems to be a nigger-in-the-woodpile somewhere.

Wherefrom the inspiration is, that circulates this article in question, is a guess, that seems to indicate the interest of some particular advertisers, more than poultry-raisers at large.

The subject matter of this hydra-headed article, is that of fire insurance for incubators and brooders, and in the writing of it, there appears to be the effort, studiously made, to set abroad the impression that no insurance companies ever did or would insure incubators or brooders, or property on which such machines were used.

The articles make the editors say "they have been unable, in response to inquiries from anxious readers, to give information as to where incubator users could get fire insurance."

Now, it seems that a person in the incubator business, selling tens of thousands of machines a year for a number of years, ought to get such an inquiry once in a while, if any one should.

In my experience in putting out about as many thousands of incubators and

DAISY B.

First Ancona pullet, Madison Square Garden, 1909. Owned and bred by H. C. Sheppard, Berea, Ohio.

brooders as anyone, I have never had that question raised by a single customer.

And if it had been raised, I could honestly have named and can still name plenty of reliable insurance companies that do insure property on which incubators and brooders are used. I know that we buy insurance for our machines, that are nearly always in operation, besides insuring our factories, wherein such machines are constantly running.

Therefore, the inference that is sought to be inculcated in the mind of the public, that no insurance company will insure any incubators or brooders, is an effort at deception. And for what purpose?

Certain incubator companies are this year advertising "fire-proof" and "insurable" incubators and brooders.

In an article in the December, 1908, Reliable Poultry Journal, on page 951 (and the substance of the same article has appeared in all the other poultry journals coming to my desk), we learn that some companies in some eastern states did refuse to insure incubators at some time. Yet right in those same states are manufactured several kinds of incubators and brooders that for years had been advertised as "fire-proof" machines, and most of these machines were not of the "cheap kind" either, albeit the "cheap ones" seem to be the objects of special attack in the propaganda now started. It is also true many of the aforesaid restrictions were in force when there were none other than high priced incubators. It is also true that incubators can be "high priced" and still "cheap" in the sense that they are poor investments and unsafe to operate.

But now some of these same "good"

Turn the Crank for Eggs

THE WALTER HOGAN SYSTEM, \$2

Pick the best and poorest hens—pullets—cockerels—and save much money in feed and care. It's ruinous to winter the no-accounts. Cull your flocks with certainty. This system of selection instructs you how to do it—surely. Its latest and most conclusive test was 1½ years at the California State Experiment Station. Detailed report, testimonials and proofs free; or, send \$2 and your promise to keep it to yourself, and get at once the Original System, 1908 edition.

Write to-day,

THE WALTER HOGAN CO.
17 National Bank Bldg., Fergus Falls, Minn.

and "fire-proof" machines have suddenly taken on a new virtue that at last makes them "fire-proof" and "insurable," the which virtue consists in a little "brass label" furnished for so much "per" by a company in that business, which "labels" are nicely nailed to any part of an incubator or brooder, and presto! change,—there is a "fire-proof" machine. Save the term!

I wrote this label-selling company for the "formula" by which such wonderful changes could be wrought and learned that for the sum of \$100 I could have an incubator and brooder tested and if they measured up to a certain set of rules and certain ideas, I could then buy "labels" with the right to nail them on my machines.

At the same time I was furnished the rules, by which the machines should be built and I find nothing in the rules that has not been used by many incubator manufacturers for years. But after I should have paid the \$100 and bought and used the "labels," I learned that even then my machines would be no more "insurable" than ever before, as I was told that "in no case would the label-selling company guarantee, that even with my right to use their 'labels' that any insurance company would insure my machines for my customers." In other words, the matter would stand just as it always has stood; insurance companies would continue to select their own risks, to insure incubators, minus or plus "labels" as they always had done, or to refuse to insure them, "labels" or not, "willy-nilly."

What do people care about high-sounding titles and names and technical terms in incubators, if only to find after they buy them for fancy prices, that, like the "last year's birds' nests," there is nothing in them.

Merit must win and a "hot air" game surely must lose. Poultry raisers still have good sense.

There is no doubt about the success of good incubators. They will forge ahead, in spite of all this "scare" advertising.

I don't suppose I shall be allowed to say anything in this article that may be construed as advertising my own machines, but I would like to point out that every incubator I ever sold was guaranteed to last and do good work for at least five years, and if any of those incubators had burned up, it seems that I should hear about it. But I know those machines are still out and doing good work and not a word has been said about invalidating any fire insurance. And what is true of my company is true of many others. Moreover, I never had to get rules from any so-called "scientific board of engineers" to tell me how to make incubators. If I had done so, I should not have said that "I made the machines." I would have been honest enough to say that an engineer, who most likely didn't know any more about chicken-raising than a macaroon, told me how to make my machines, even if at the same time I was posing as a wonderful inventor.

Out of all the rules laid down by these "engineers" there is not a word about the most essential points in incubator and brooder construction from the standpoint of safety. I refer to the form and relative sizes of lamp flues and the construction of lamp burners, to render them easily cleanable, and the flue space and wick-tube space necessary, according to wick capacity. A man could build an incubator or brooder according to these rules and still have a fire trap.

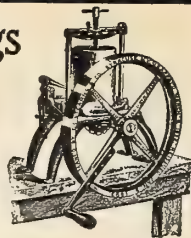

Just where the poultry industry is benefited by the "con" that is now circulating is not very evident. All this "scare" talk about "insurable" incubators is behind the times. There are plenty of "safe" incubators and brooders to be had—and have been for a number of years, and thousands and thousands of them are insured and always have been! At least there is nothing in the situation now that is any more reassuring than there has been for years. We know the "brass labels" add absolutely nothing to the value of any machine, that the same machines do not have without the "labels." It is still a fact that hundreds of insurance companies are writing insurance on the "standard policy form" in use all over the United States, and this "standard policy form" does not except incubators and brooders.

There is nothing to call for a hysteria of printers' ink, and the fellows who are engineering the present campaign of "scare" advertising may wake up to find they have played with a boomerang.

Otto Barth,
Secretary Queen Incubator Co.
Lincoln, Neb.

Pays for one year's subscription to American Poultry Journal and a copy of "How to Build Poultry Houses—A 64-page book on poultry house construction.

THE TURNING POINT.

The hatching of eggs by artificial incubation is one of the oldest processes we have any knowledge of. It was practiced by the ancient Egyptians, who buried the eggs in a manure heap. They had some little success with this process. Later on they used the heated sands of the desert for the same purpose, but this was more or less a lottery, for they had no positive means of knowing that the sands were going to retain the necessary 103 degrees of heat for a period of twenty-one days. Centuries later the incubator, very much in the form as we know it today, was invented. Improvement after improvement was made in this machine and poultry raisers took it up, for it was the one means of hatching poultry at seasons of the year when nature did not prompt the hen to set. The success with the modern incubator was almost as problematic as the methods of the ancient Egyptians. The operator, exercising all possible care, met with success at times, at other times failure, but the turning point was reached when Mr. H. M. Sheer, of Quincy, Ill., placed upon the market his wonderful invention. This man has devoted a lifetime to the study of artificial incubation, inventing more and better attachments than all the rest of the

incubator inventors put together. These inventions while numerous are as much in the interest of the inexperienced as the experienced operator. Mr. Sheer describes in his book his many incubator improvements. This book contains much valuable information which should be read not only with pleasure but with much profit by any poultry raiser, be he professional or amateur. If any of our readers are interested in the science of artificial incubation we know of no investment that will pay them bigger interest than the answering of one of Mr. Sheer's advertisements.

RAISING CHICKS.

Raising chicks is pleasant work when one uses brooders that will raise every healthy chick entrusted to its care. The great trouble has been to find brooders that will do this, and at the same time be so simple in construction that the operator does not have to go through "acrobatic stunts" to see what is going on inside, or to clean it, which we all know must be done often. At last there is a brooder on the market that will raise chicks successfully, and the labor involved is practically nothing. The operator can also see all that is going on, both day and night, because the

hovers are glass. This brooder is growing in favor by leaps and bounds. Why shouldn't it? It is just the kind of brooder poultry men have been looking for. If you are interested in raising chicks, send for illustrated catalogue of the "Thomas Convertible Brooder," manufactured by the H. J. Thomas Brooder Company, Dept. K, Detroit, Mich.

A VERY GENEROUS OFFER.

Do you want a good incubator? That is the kind which Mills' Seed House, Dept. 6, Rose Hill, N. Y., is giving away to their customers. Every one interested in gardening or poultry raising should get their new fully illustrated books giving full particulars about these free incubators. Simply send them your address on a postal and these books will be sent you promptly and may be the means of saving you considerable expense.

S. A. Hummel, Freeport, Ill., has just issued his 1909 catalogue. This catalogue gives description of all the leading varieties of standard bred fowls, and other valuable information to the ordinary poultry breeder. A copy will be sent free to all who ask for it. Send for one today and mention American Poultry Journal.

Get "LEE'S" Book FIRST

Don't be misled by statements of manufacturers who talk loud and long about their "testimonials" but never tell how they are obtained, and are very careful to give only a meager description of the "inside" of their machine.

Certainty of Results vs. Guesswork accurately explains the difference between the Mandy Lee and all other incubators. In our machine you **know** what your hatch will be after the first test-out; in others, the result is **always** in doubt, and with reasonable certainty of a large number **dead in the shell** on the 21st day.

We **guess** at nothing. We make favorable hatching conditions **at the eggs** during **each** of the **21** days of incubation, regardless of conditions outside the machine.

Mandy Lee

Incubators and Brooders

are best from every standpoint. They develop more of the weaker germs—those that in other incubators would die from the 10th to 19th day; they hatch larger percentages of strong, healthy chicks during the **entire season**. The brooders—both fireless and lamp-heated—raise practically every chicken entrusted to their care.

We offer you a Certainty; others a Possibility.

Which do YOU prefer.

Send for catalog, and booklet "Incubator Hygrometry," describing the Mandy Lee Hygrometer, the only reliable hygrometer (or moisture gauge) adapted for use in all incubators. **FREE!**

Lee Fireless Brooders

are an absolute success outdoors in any situation warmer than 18 deg. above zero; always preferable to lamp-heated brooders for indoor use. Perfect ventilation; no dirty, smoky lamps; no danger from fires. Better and stronger chicks. Send for catalog and descriptive circulars.

Just Three Things

are required to make 90 per cent to 100 per cent hatches every time and in any season, climate, or altitude: 1st, **correct heat**; 2d, **correct moisture**; 3d, **correct ventilation**. In other incubators it's mostly guesswork; in the Mandy Lee it's a scientific certainty. In other incubators hatching conditions are right if you guess right; in the Mandy Lee they are right if you follow simple instructions.

Correct Heat means 103 degrees at the upper surface of each and every egg, gradually increasing to 105 degrees during the last week. Measured accurately with a Mandy Lee Thermometer, distributed by our patent perforated-tube system, and easily regulated within a variation of one half degree. Most other incubators vary from 2 to 5 degrees.

Correct Moisture means 65 per cent at commencement of incubation, gradually decreasing to 50 per cent during 3d week. Measured accurately with a Mandy Lee Hygrometer, the only instrument suited to incubator work, and regulated within a variation of 2 or 3 per cent. Most other incubators vary from 20 to 50 per cent and with no measurement or regulation.

Correct Ventilation means a gradual change of air in the egg-chamber once every half hour. Automatically regulated by simple adjustment of damper on heater. Some other incubators give a change of air every 5 minutes, causing a rapid draft; others change the air only once in 24 hours with result that the air becomes foul or stagnant.

How to Build Poultry Houses

A 64-PAGE BOOK

Devoted to the construction of poultry houses and fixtures, brood coops, etc. This book gives plans and specifications for building all kinds of poultry houses, brood coops, nest boxes, dust boxes, shipping coops, etc. This book should be in the hands of every poultryman. It will save money by telling just the kind of house desired for the different localities and the size best suited for the various sized flocks.

Price is only 50 cents

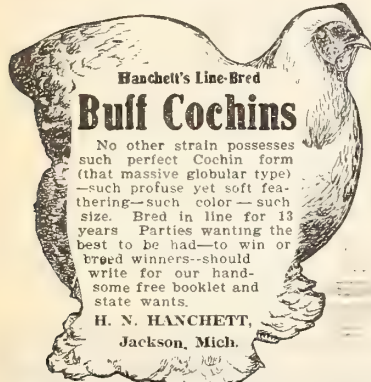

Will send this valuable book and American Poultry Journal one year for 75 cents. Send all orders to

NEW BROODING SYSTEM.

W. B. Candee, Dewitt, N. Y., dealer in and manufacturer of hot water brooding systems, has issued a very complete circular treating on his brooder. The heater is especially designed for quick results and economy of fuel. The regulator is entirely automatic and works by the expansion and contraction of the water, and is made by the same company making the boiler.

Mr. Candee also mentions in the circular his practical pipe brooding system, which he claims is unlike anything on the market and far ahead of the old style overhead systems so commonly in use. Mr. Candee will send blue prints with specifications for installing this system, also can furnish hovers, all metal parts for brooders, pipe and fittings, as well as heater. If the prospective purchaser will give some idea of the building, giving all dimensions and construction of roof and sides, number of hovers required, Mr. Candee will be pleased to give estimate of the cost. He is also prepared to furnish expert advice on location, construction and equipment of any poultry plant.

THE FENCE THAT LASTS.

There isn't anything that the farmer buys in which a mistake is more hopeless than in wire fence. If he gets "stuck," he is stuck for good, because there is no possible way of remedying the defect; it is a case of buying a new fence. The Brown Fence & Wire Company, of Cleveland, Ohio, is sending out some interesting literature on wire fence, showing why so much of the fence put up in recent years has rusted out and gone to pieces in so short a time. They point out very clearly that a fence, like a chain, is only as strong as its weakest part. It must be good all over to be good at all. A strong, heavy stay or upright is as much important as a heavy lateral. They moreover show that in recent years much of the galvanizing that has been done is hardly worth the name galvanizing at all. The wire is merely dipped into melted zinc instead of being put through a true galvanizing process. We know everyone of our readers will be interested in what Mr. Brown has to say on this fence question. Send to him for his little book. It will open your eyes.

If you are interested in Single Comb Buff Leghorns, the heaviest laying strain in the east, send to Jas. Kugler, Jr., Maple Hill Farm, R. F. D. No. 1, Frenchtown, N. J., for his stock and egg circular, which quotes low prices on eggs from grand exhibition matings and fine breeding stock. Buff Leghorns have been bred to standard requirements for nine years on this farm and are now acknowledged the best in the east. Columbian Wyandottes are also bred on Maple Hill Farm, of the highest quality. Send for their stock and egg circular, just out. See ad on another page.

Lyman H. Hill, of Jackson, Mich., won at Boston, Mass., January 11-16, 1909, as follows: 2nd cock, 3rd cockerel, 4th hen, 4th pullet. Schwab, judge White Plymouth Rocks.

HOW TO MAKE POULTRY PAY.

The increasing demand for the very interesting and instructive booklet entitled "How to Make Poultry Pay" has led E. G. Stearns & Co., of Syracuse, N. Y., to issue another edition. This booklet, which ought to be in the hands of every poultry man, is attractively printed and contains a fund of valuable information. It describes at length the various models of the well-known Stearns green bone cutters, which are turned by hand or power, and shows an illustration of each model, together with specifications, prices and complete directions.

As is well known, the Stearns green bone cutter is a machine for cutting up finely the hardest bone or gristle and clear meat. Especial attention is paid to the careful construction and operation of each machine, including the ball bearings and the automatic feed, as well as to the famous Stearns steel cutter head, which has been patented in various foreign countries.

The special advantages claimed for the Stearns green bone cutter are that it is the easiest fast-cutting and the fastest fine-cutting machine in the market, and that it is the only machine that cuts

green bone fine enough for bantams and chicks, and the only bone cutter ever made that will not clog with gristle or clear meat.

Of especial interest to poultry raisers will be the articles entitled the "Best Food for Fowls" and "Important Facts for Feeders." Great emphasis is laid upon the absolute superiority of fresh green bone as a poultry food and the way it should be cut and fed to fowls in order to secure the best results.

KEEPING RECORDS.

On large poultry farms careful records are kept, but the ordinary poultry raiser has little idea of the results he is actually getting.

Therefore "Ertel's Poultry Diary," is something that is likely to prove very valuable. It has pages for recording the egg output, the incubator output, cost of feed and supplies and the amounts received for eggs and poultry sold with space enough to last at least a year and perhaps two.

No matter how small the flock it is worth while to know the returns secured.

There is no doubt that if many general farmers had the records they would find

that their hens are doing better for them than other live stock.

The Diary also contains hundreds of hints and helps valuable to the poultry raiser, and an article, "Uncle Sam's Advice," is well worth reading by those who have not had access to the original government bulletins.

This book is free, and the Geo. Ertel Co., Quincy, Ill., will gladly send copies to readers of the American Poultry Journal, who ask for it.

At the Poultry and Pet Stock Association held at Farina, Ill., December 14 to 17, R. F. Wyatt, of Alma, Ill., exhibited a pen of his White Plymouth Rocks, winning 1st on cock, 1st on hen, 1st on pen and 2nd sweepstakes, silver cup. There being a good class of White Rocks exhibited, there also was a big exhibit of almost every variety.

Lyman H. Hill, of Jackson, Mich., won at Michigan State Show, Detroit, January 9-14, 1909, as follows: 1st, 4th cock; 1st, 2nd, 4th, 5th hen; 1st cockerel; 1st, 5th pullet; 1st, 2nd pen; every possible special. Two hens uncut for plumage color; 70 in White Plymouth Rock class. Chas. McClave, judge.

MEDICATED CHARCOAL

MAKES HEALTHY BIRDS

More birds are killed by bowel troubles than by any other form of disease, particularly among the recently hatched chicks. We positively guarantee Medicated Charcoal to cure cholera, diarrhoea, or any bowel complaint in chicks or fowls within a few hours. If it is given to your birds regularly every few days it will prevent such diseases from getting a hold on the flock.

It is a germ killer, blood purifier, relieves gas, makes digestive organs healthy.

HEALTHY BIRDS MAKE HEALTHY PROFITS

It is the only remedy ever discovered for the cure of "White Diarrhoea." This scientifically prepared remedy is in use on the largest poultry plants throughout the United States. Guaranteed under Government Pure Food Laws. 10 lbs. \$1.00—25 lbs. \$2.25—50 lbs. \$4.25. If your dealer can't supply you, send direct to the manufacturer.

Des Moines Incubator Co., 269 Fourth St., Des Moines, Ia.

We Are Giving Away \$250 Cash

The above amount of cash is to be given away to those who send us the largest list of subscribers to American Poultry Journal by May 18, '09

Also a Pony, Wagon And Harness

Will be given to the boy or girl, man or woman, who sends in the largest list of subscribers to American Poultry Journal by June 18, 1909. **And a Large List of Special Prizes.** Send today for full particulars of this great prize offer and get busy and WIN. Address

American Poultry Journal Pub. Co. 113 South Clinton St., Chicago, Illinois

A SCIENTIFIC BROODER.

Poultrymen are giving much thought at present to better methods of brooding. Many experienced poultry raisers believe that the custom of subjecting chicks to temperatures of 95 to 100 degrees is unnatural and is the main cause of so great a mortality. A flock with the hen is not required to swelter in a hot dry atmosphere for 8 to 10 hours of nights, but the chicks get the warmth they desire by coming into contact with the body of the hen which is, of course, more than 100 degrees, but the chick itself rests in a temperature many degrees below 100 and if it so wishes it can reduce the temperature still lower by nestling less closely to the hen. But chicks in most hot air hovers must remain in the same high, dry heat till morning, which greatly weakens them and makes them subject to white diarrhea, roup, and other diseases. Being convinced that something was wrong with the prevalent manner of brooding, a practical poultryman, who is also a scientist, began a number of years ago the construction of a hover which would imitate the hen in all that was good and improve upon her delinquencies. The outcome is the highly scientific Close-to-Nature hover which has received such unqualified endorsement the last two seasons. It warms the chick the way the hen does, by coming into contact with the actual body that gives the heat. It is truly close to nature. It beats the hen in that it absolutely prevents the chicks piling up or overcrowding in the hover and that it gives every chick, no matter how many may be in the hover, an abundance of pure air from outside, temperately warmed, introduced in the hover through the principles of induction and percolation. The ingenious arrangement for contact warmth, ventilation by induction and the prevention of overcrowding is not duplicated in any brooder now advertised. It meets Prof. Rice's provisions that a chick should be permitted to reach a temperature of 100 degrees and should be able to get away from that temperature when it desires, and that it should have an abundance of pure air. It has the additional advantage that chicks cannot crowd.

The Close-to-Nature being fireproof and able to withstand the rigors of winter, it is

rapidly becoming one of the most popular brooders in the country. It is made at Earlham, Iowa, by the Close-to-Nature Company. Send for catalogue.

INCUBATORS AND POULTRY SUPPLIES AT MADISON SQUARE GARDEN.

Among the usually large displays of incubators and brooders at Madison Square Garden there appeared a comparatively new exhibit, namely, the Stumpp & Walter Company, of 50 Barclay St., who are the New York agents for the Prairie State Incubators and Brooders, and they have recently enlarged their poultry supply department, which is run in connection with their extensive seed business at the above address, and their exhibit of Prairie State Incubators and Brooders, and a general and very complete line of poultry supplies at the Garden was one of the most attractive exhibits in this line.

They have adopted for a trade word "Quality Kind" and this is their motto in the selection of all stock carried by them, and means that they handle only the best of everything.

They have recently engaged the services of Frank W. Gaylor to take charge of their incubator and poultry supply department, who gives his entire time and attention to this line. Mr. Gaylor being a practical poultryman with over thirty years' experience, occupies a position above the average supply dealer, as he is able to and willing to give all customers the benefit of his long experience. The readers of the American Poultry Journal will find their ad in our columns and we advise all to write to the Stumpp & Walter Company, 50 Barclay St., New York city, for one of their complete supply catalogues.

F. A. Bennett, Canton, Ill., breeder of S. C. R. I. Reds and Barred Plymouth Rocks, reports the following winnings at the late Illinois State Show, Springfield, Ill. On Single Comb R. I. Reds, 1st, 2nd, and 4th cock; 1st, 2nd, 3rd hen; 1st, 2nd and 4th cockerel; 1st, 2nd, 3rd, 4th pullet; 1st and 2nd pen; 1st, display yard. Special for best 10 S. C. Reds. Cup given by National S. C. R. I. Red for best cock,

hen, cockerel and pullet. Cup by State Branch of the National S. C. R. I. Reds for best pen. Color and shape specials on males and females. On Barred Plymouth Rocks, 2nd cock, 1st hen; 3rd and 4th cockerel; 1st pullet; 1st pen; 1st pullet mating yard display; 2nd cockerel mating yard display. Silver cup given by American Plymouth Rock Club for best cock, hen, cockerel and pullet. Color and shape special on females.

Mr. J. W. Andrews, of Dighton, Mass., breeder of White Wyandottes, informs us that he has just captured 1st on young breeding pen at the Great Boston Show, a feat that he has now accomplished three times in succession, in 1906, 1907 and 1909. Mr. Andrews did not show in 1908 but showed display pen only, not for competition. The above feat of winning three times in rotation on a breeding pen we do not think has ever been equaled by any other exhibitor in a show like Boston, where the competition on White Wyandottes is the strongest of anywhere in America. Mr. Andrews has been an exhibitor at Boston for the past twelve years and has never failed to win a prize, including 1st cockerel, 1907, and has furnished winners for such shows as New York, Chicago, Indianapolis and a large number of others too numerous to mention. Such consistent winning for so long a period stamps his strain as being one of the best in America today. Mr. Andrews is preparing a handsome mating list for 1909, which to those interested in White Wyandottes is welcome.

E. J. Barker, Thorntown, Ind., is offering some choice cockerels and a half dozen yearling cocks of his famous prize winning strain of Light Brahmas. You can do no better than send him your order, as Mr. Barker's birds are strong in color points, good leg and toe feathering and they get large.

In our report of the late Chicago Show in our December issue we left out, through mistake, the winnings of Harry Meiselbach, Melrose Park, Ill. On Single Comb White Minorcas he won 1st and 2nd cock; 1st, 2nd, 3rd and 4th hen; 1st, 2nd, 3rd and 4th cockerel; 1st, 2nd, 3rd and 4th pullets. A total of fourteen prizes on this variety.

EXHIBITION COOPS

ordered without any finish. Free with each order of one dozen single coops, we will send without any extra charge one coop pen size, or for \$6.50 we will ship one-half dozen single and one pen size. Our coops are all machine made. The single coops are 24x30 inches and the pen coops 24x48x30 inches as called for in the American Standard of Perfection. Coops of any other size are very apt to be set in the back row at many poultry shows. The dowels are of the best yellow pine and the door slides all the way up, which will allow the bird to be removed without breaking the feathers. This means POINTS in scoring. All coops can be shipped flat and be set together in a few minutes. They can be as easily taken apart after the show and packed away in a small space. Our coops are built strong and can be shipped from show to show with birds enclosed in perfect safety. Order direct from this ad or send for our new illustrated catalog, showing how our coops are made, with pictures of the machines that make them. The catalogue shows the different styles of coops we make and also tells about our popular I. O. Trap nests, feed boxes, shipping coops and other poultry supplies. We make a specialty of cooping shows and make a special 8 section coop that is just the thing for poultry associations.

Now ready for immediate delivery. Prices, single size, \$1 each; \$5.50 per half doz.; \$10 per dozen. Pen size \$2 each, two for \$3.50 or six for \$9. Furnished complete with the proper size tacks, nails and cloth to cover. All coops are stained a rich mahogany color unless size tacks, nails and cloth to cover. All coops are stained a rich mahogany color unless size tacks, nails and cloth to cover. All coops are stained a rich mahogany color unless size tacks, nails and cloth to cover. All coops are stained a rich mahogany color unless size tacks, nails and cloth to cover.

Baby Chick Farming

With Lakewood Farm Baby Chicks

BABY chick farming with Lakewood Farm baby chicks direct from our incubators shipped by express when one day old is the small poultry farmer's opportunity.

Formerly the small poultry farmer had either to set a hen, or go to the expense and trouble of purchasing incubators and maintaining a breeding establishment—it was simply a case of work and expense from start to finish, with results uncertain.

To-day things are different. Less than five years ago Lakewood Farm conceived the idea that, with an original method of packing, baby chicks could be shipped many miles by express without being chilled, smothered or crushed in transit.

This fundamental idea proved successful from the start. To-day we are prepared to ship our baby chicks hundreds of miles and feel assured of their safe arrival at destination.

Lakewood Farm baby chicks are a miniature reproduction of our famous Lakewood Farm Layers, The Great Profit Payers, Single Comb White Leghorns Bred to Lay, the Big Kind.

Yes! You will find baby chick farming a fascinating occupation if handled rightly. There is no branch of poultry farming so interesting as raising baby chicks; there is positive pleasure if you enter into it in the right spirit. If this spirit is in your blood and you have a little land and time to devote to the pleasure, do not hesitate because of lack of experience. When you receive your baby chicks remember there are years of study, work and experience being handed to you in

the form of little yellow balls filled with life.

We wish we were able to meet you personally and demonstrate to you the enjoyment that can be derived from baby chick farming.

We should like to tell you how you can make big returns from a small investment.

A good investment can always stand a sweeping investigation.

We will gladly assist you to investigate our baby chick farming in any way you desire.

We honestly believe that a few dollars invested in our baby chicks will bring in an income far beyond your expectations.

Here you are again face to face with another hatching season. How much good nature, good energy, and good money are you going to lose this coming six months because of a faulty, haphazard system of breeding and not understanding incubation and its natural laws.

How many long, wearisome hours will you spend trying to make the old hen set?

You, as a wide-awake poultry farmer, should be quick to take advantage—get your order in early for chicks—order your brooders and feeds, or let us do it for you—we can buy your equipment and save you money.

Our experience and knowledge is yours.

Lakewood Farm baby chicks in your hands will prove "Profit Payers."

Remember, they are Lakewood Farm Layers, the Great Profit Payers, Single Comb White Leghorns Bred to Lay, the Big Kind.

LAKEWOOD = = = NEW JERSEY

A Living from Poultry

ON A CITY LOT.

**\$1,500 in ten months from
sixty hens on a corner
of a City Lot.**

TO the average poultryman that would seem impossible, and when we tell you that we have actually done a \$1,500 poultry business with 60 hens on a corner in the city garden 40 feet wide by 40 feet long, we are simply stating facts. **It would not be possible to get such returns** by any one of the systems of poultry keeping recommended and practiced by the American people, still it is an easy matter when the new **PHILO SYSTEM** is adopted.

**THE PHILO SYSTEM IS UNLIKE ALL OTHER
WAYS OF KEEPING POULTRY**

and in many respects is just the reverse, accomplishing things in poultry work that have always been considered impossible, and getting unheard-of results that are hard to believe without seeing; however, the facts remain the same and we can prove to you every word of the above statement.

**THE NEW SYSTEM COVERS ALL BRANCHES OF THE WORK NECESSARY
FOR SUCCESS**

from selecting the breeders to marketing the product. It tells how to get eggs that will hatch how to hatch nearly every egg, and how to raise nearly all the chicks hatched. It gives complete plans in detail how to make everything necessary to run the business and at less than half the cost required to handle the poultry business in any other manner. There is nothing complicated about the work, and any man or woman that can handle a saw and hammer can do the work,

TWO-POUND BROILERS IN EIGHT WEEKS

are raised in a space of less than a square foot to the broiler without any loss, and the broilers are of the very best quality, bringing here three cents per pound above the highest market price

**OUR SIX MONTHS' OLD PULLETS ARE
LAYING AT THE RATE OF 24
EGGS EACH PER MONTH**

in a space of two square feet for each bird. No green cut bone of any description is fed, and food used is inexpensive as compared with food others are using.

Our new book, the **PHILO SYSTEM OF PROGRESSIVE POULTRY KEEPING**, gives full particulars regarding these wonderful discoveries, with simple, easy-to-understand directions that are right to the point, and fifteen pages of illustrations showing all branches of work from start to finish.

**DON'T LET THE CHICKS DIE IN THE
SHELL**

One of our secrets of success is to save all the chickens that are fully developed at hatching time, whether they can crack the shell or not. It is a simple trick and believed to be the secret of the Ancient Egyptians and Chinese which enabled them to sell the chicks at ten cents a dozen.

CHICKEN FEED AT 15 CENTS A BUSHEL

Our book tells how to make the best green food with but little trouble and have a good supply any day in the year, winter or summer. It is just as impossible to get a large egg yield without green food as it is to keep a cow without hay or fodder.

**OUR NEW BROODER SAVES TWO CENTS
ON EACH CHICKEN**

No lamp required. No danger of chilling, overheating or burning up the chickens as with brooders using lamps or any kind of fire. They also keep all lice off the chickens automatically or kill any that may be on when placed in the brooder. Our book gives full plans and the right to make and use them. One can be easily made in an hour at a cost of 25 to 50 cents.

E. R. PHILO, PUBLISHER, 14 Third St. Elmira, New York

THE INOVO THERMOMETER.

The Inovo thermometer consists of a celluloid egg in the center of which is suspended the bulb of a very sensitive thermometer.

In all incubators there is a great difference in temperature between the top and bottom levels of the eggs. This difference in temperature may be anything from 2 deg. to 7 or 8 deg., depending upon the make of the machine and upon the temperature of the incubator room. The old style thermometer can give only the temperature of one level which is very different from the actual temperature of the eggs. The Inovo thermometer being egg shaped balances the top and bottom temperatures and gives the exact temperature of the eggs themselves.

Following is only one of the many testimonials received by Mr. Wagner:

Deer Park, Ont., Aug. 22, 1907.

Dr. C. J. Wagner, Toronto, Ont.

Dear Sir: I have much pleasure in favorably commending your "Inovo" thermometer for use in artificial incubation. I have made use of these thermometers throughout the past season in all my incubators, and believe it to be the only accurate method for taking records of temperatures in an incubator, and for making comparative tests in temperatures between one machine and another.

I certainly believe your invention will materially aid operators of incubators, and assist in securing good vigorous chicks as it is such an absolutely safe guide in re-

The above is a true likeness of the first prize White Plymouth Rock Cockerel at McKeesport, Pa., December, 1908. Owned and exhibited by L. J. Moss, Box 1515, Pittsburg, Pa.

cording what temperatures are being applied to the eggs in an incubator.

I wish you every success your ingenuity deserves. Yours sincerely,

(Signed) L. H. Baldwin.

For full information write to H. L. Wagner, 429 King St., Pottstown, Pa.

Fred W. Cobb, 49 Rockland Place, Newton Upper Falls, Mass., breeder of Buff Plymouth Rocks, starts his display advertising in our columns this month. Mr. Cobb won at the late Boston show 2nd cock; 5th hen; 6th pullet; color special on male. This was the largest and best class ever shown at Boston; Schwab, Judge. Look up his ad in this issue and write for further information. Mention American Poultry Journal.

A. L. Russell, Washington, N. J., breeder of White Plymouth Rocks, reports the following winnings on his birds so far this season. At the Nazareth Pennsylvania Square Deal Show he won 1st cock; 1st hen and 2nd cockerel; 1st, 4th and 5th pullet. At the Easton, Pa., Show he won 2nd cock; 5th cockerel; 1st and 2nd pullet on five entries. He is offering eggs from choice prize winning birds at \$1 and \$2 per 15, or \$6 per hundred. He also has a few choice cockerels for sale cheap. Write him today and mention American Poultry Journal.

Valley Falls, N. Y., Sept. 5, 1908.

It was my privilege to spend a week in Elmira during August, during which time I saw the practical working of the Philo System of Keeping Poultry, and was surprised at the results accomplished in a small corner of a city yard. "Seeing is believing" they say, and if I had not seen, it would have been hard to believe that such results could have followed so small an outlay of time, space and money.

(Rev.) W. W. Cox.

Oct. 22, 1908.

P. S. A year's observation, and some experience of my own, confirm me in what I wrote Sept. 5, 1907. The system has been tried so long and by so many, that there can be no doubt as to its worth and adaptability. It is especially valuable to parties having but a small place for chickens; seven feet square is plenty for a flock of seven.

(Rev.) W. W. Cox.

Ransomville, N. Y., Dec. 5, 1908.

Dear Sir,—Last spring we purchased your book, entitled the "Philo System," and used your heatless brooders last spring and summer. The same has been a great help to us in raising the chicks in the health and mortality, the chicks being stronger and healthier than those raised in the brooders with supplied heat. We believe this brooder is the best thing out yet for raising chicks successfully. We put 25,000 chicks through your heatless brooders this last season, and expect to use it more completely this coming season. We have had some of the most noted poultrymen from all over the U. S. here, also a large amount of visitors who come daily to our plant, and, without any exception, they pronounce our stock the finest and healthiest they have seen anywhere this year.

Respectfully yours, W. R. Curtiss & Co.

Skanectates, N. Y., May 5, 1908.

One article of the Philo System entitled "A Trick of the Trade," has been worth three times the amount the book cost. I saved on my last hatch fifty chickens, which are doing nicely.

W. B. Rease.

Send \$1, and a copy of the latest revised edition of the Philo System Book will be sent by return mail.

The latest edition has many pages of additional matter, and by ordering direct you are sure to get the latest and most approved book.

BIG COMBINATION CATALOGUE.

I will send you my catalogue covering any of my forty-three varieties of special offers listed as follows: Squab Breeders, Poultry, Ducks, Geese, Pheasants, Pea Fowl, Guinea, Ferrets and Dogs. First quality stock guaranteed. With only five entries of poultry and pigeons, these won three 1sts, one 2nd and one 3rd prize at the great St. Louis Poultry Show. White and Brown Leghorn eggs, one dollar per fifteen. Pheasant eggs a specialty in season. Send for lists and catalogue R of our new special feature offers for all or any of our high-grade guaranteed "Forty-three Varieties." Missouri Squab Company, St. Louis, Mo.

At the late Madison Square Garden Show, Bird Brothers, of Meyersdale, Pa., exhibited a number of their noted Bronze Turkeys and report the following prizes: 2nd and 4th cock; 4th hen; 4th cockerel; 3rd and 4th pullets. They also exhibited Partridge Wyandottes, on which they won as follows: 1st cock; 2nd, 4th and 5th hen; 5th cockerel; 3rd, 4th and 5th pullets; also three specials for best shaped male, best colored male and best colored female. Their first prize Partridge Wyandotte cock was without doubt the best specimen of this variety ever exhibited at Madison Square Garden. Bird Brothers have been leading winners during the past years at Johnstown, Pittsburgh, Hagerstown and New York. Their Bronze Turkeys are known from one end of the country to the other, and they always guarantee satisfaction to every customer. Write them for further particulars and mention American Poultry Journal.

B. M. Billings, Oberlin, Ohio, reports the following winnings on his R. I. Reds at Lorain, Ohio, January 5 to 8, 1909: 1st cock; 1st hen; 1st, 2nd and 4th cockerels; 1st, 2nd and 3rd pullets; 1st pen on Rose

Comb R. I. Reds. Galt & Cram, judges. At the Oberlin Show, December 15 to 18, 1908, on Rose Comb Reds, 1st cock; 1st hen; 1st, 2nd and 3rd cockerels; 1st and 4th pullets; 1st pen. On Single Comb Reds, 2nd cock; 1st and 2nd hens; 1st, 3rd and 5th cockerels; 1st, 2nd and 5th pullets; 1st pen. At Elyria, Ohio, September 8 to 11, 1908, on Rose Comb Reds, 1st and 2nd cock; 1st and 2nd cockerels; 1st and 2nd pullets. On Single Comb Reds, 1st and 2nd cock; 1st and 2nd hens; 1st and 2nd cockerels; 1st and 2nd pullets; no pen shown.

L. J. Moss, Box 1515, Pittsburg, Pa., reports the following winnings on his White Plymouth Rocks at McKeesport, Pa., December 7 to 12, 1908: 1st, 2nd, 3rd and 4th hens; 1st, 2nd and 3rd pullets; 1st, 4th and 5th cockerels; 1st cock; 4th pen. Two cash specials for best display and for winning highest number of points in the American class. This record certainly indicates that Mr. Moss had the quality in his birds and proves that his last year's matings were along the right line and his matings this year are even better than last. If you are looking for quality, send to Mr. Moss for his circular and mention American Poultry Journal.

N. V. Fogg, Mt. Sterling, Ky., breeder of Single Comb Leghorns, reports that his 1909 mating list is now ready and requests our readers to send for copy of same. Mr. Fogg is a noted breeder of Leghorns and has produced some of the best birds in the country. In writing him do not fail to mention American Poultry Journal.

Pratt Poultry Pens, Evanston Ill., breeder of White Orpingtons, have just issued their mating list for 1909. They have mated up five elegant pens. Pen No. 1 is headed by first prize cockerel at the late Chicago Show. This pen contains six fe-

males, including 1st and 2nd pullets at the late Chicago Show and none scoring under 93½. Eggs from this pen \$20 per 13. Pen No. 2 is headed by 2nd prize cockerel at the late Chicago Show. All these pens contain birds of the typical Orpington shape and will produce birds that will be entirely satisfactory to customers. Write for mating list and mention American Poultry Journal.

Walter Sherman, Newport, R. I., breeder of R. I. Reds; White, Barred and Buff Rocks; Silver, White, Golden, Buff and Columbian Wyandottes; Brown, White and Buff Leghorns; Black Javas; Light Brahmas and Pekin Ducks, has just issued a very handsome 24-page booklet, profusely illustrated with fine half-tones and a three-colored picture, true to life. This catalogue is full of valuable information to the ordinary poultry fancier, and we request that our subscribers send for a copy at once and mention American Poultry Journal.

J. C. Ritter & Son, Olney, Ill., breeder of Buff Wyandottes exclusively, reports the following winnings at the Evansville, Ind., Show January 12 to 16, 1909: 1st, 2nd and 3rd cock; 1st, 2nd, 3rd and 4th hens; 1st, 2nd, 3rd and 4th cockerels; 1st, 2nd, 3rd and 4th pullets; 1st and 2nd pens. Special for best place in American class. Silver cup for best display on Wyandottes and all four club ribbons. Write them for prices on stock and eggs and mention American Poultry Journal.

John H. Jackson, Hudson, Mass., breeder of the World's Famous White and Columbia Wyandottes, reports that his matings for this season are better than ever and he is now prepared to fill all orders for eggs promptly and to the entire satisfaction of every customer. Write him for his large four-page circular and mention American Poultry Journal.

OUR BEST YEAR IN THE SHOW ROOM

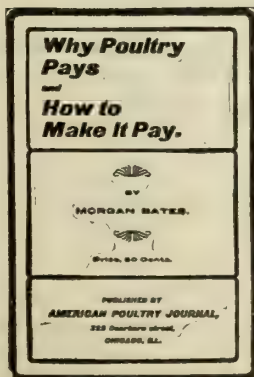

Following our winnings at Sycause, New York, and Hagerstown, Maryland, we won the following prizes at America's two largest shows on our Columbian Wyandottes:

CHICAGO, ILLINOIS—Cock, first and fourth; hen, first, fourth and fifth; pullet, second, fourth and fifth; cockerel, second and fourth; pen, first, third and fourth. Challenge cup for best display, with forty-two points!

MADISON SQUARE GARDEN, NEW YORK—Second cock, fifth hen and third pen.

Really choice breeding stock and a few exhibition birds still left, but no low priced birds. Egg books in WHITE AND COLUMBIAN WYANDOTTES open.

Sunnybrook Farm, Box A. P., West Orange, N. J.

WHY POULTRY PAYS AND HOW TO MAKE IT PAY

A book for the beginner in poultry raising and for those engaged in it who are interested in securing from the business the greatest profit obtainable. This book tells you how to start right, how to succeed with poultry, how to live breed, how to win at the shows, how to breed and prepare fowls for market, how to feed for the production of eggs. Also contains a chapter on Poultry Diseases and simple remedies for same. Gives instructions on incubators and brooders and much other valuable information, and is profusely illustrated with ideal drawings of Standard fowls.

We are selling this book at the popular price of **50 cents**. This book and one year's subscription to American Poultry Journal for only **75 cents**. Send all orders to

BROODING MORE VITAL THAN HATCHING.

"The Brooding Problem Solved" is the subject of a book issued by the Bruner Manufacturing Company, 601 South St. Paul St., Indianapolis, Ind., makers of the Bruner Line of brooding devices, and is a book that should be in the hands of every poultry raiser in the world, whether you raise chicks by the dozen or by the thousand.

It is a well known fact that what the poultry world needs more than any one thing today, is a really good brooding device, and the manner in which this book handles this, the most vital question we have to consider, proves beyond a doubt that this concern can produce a machine worthy of your investigation.

Experienced poultrymen know the importance of care in the selection of their brooding devices, but the novice frequently overlooks this and either buys some cheap "hot box" or depends upon home-made contrivances, with the result that he fails to raise a profitable number of the chicks hatched. Brooding is of equal if not more importance than incubating, as it is the chicks you raise that are turned into money.

The Bruner Line of brooding devices, which are fully described and illustrated in the above mentioned book, are especially strong in that they are adaptable to any and all conditions—indoors, outdoors, in brooder houses or in colony houses. The Mother Hoyer, which is the heart of all their brooders, is indeed a wonderful creation, and is as near the old hen as any machine can be.

These brooders will certainly prove a blessing to the poultry world.

We take pleasure in calling attention to their ad on another page of this issue.

Robert Parmenter, Knoxville, Ill., breeder of Single Comb White Leghorns, reports the following winnings at Chicago, December, 1908: 1st hen and National Single Comb Leghorn special. At State Show, Springfield, Ill., 1st cock; 2nd cockerel; prize for 2nd pullet; 3rd pen. At Bushnell, Ill., 1st, 2nd, 3rd and 4th cockerel; 1st, 2nd and 3rd pullet; 1st hen; 1st pen. At Peoria, Ill., 2nd cock; 3rd cockerel; 3rd pen; 5th pullet. He is now booking orders from choice matings and any one interested in this variety should write him for prices and particulars.

Ellenwood Poultry Farm, R. R. No. 1, Hatboro, Pa., breeders of Rose and Single Comb R. I. Reds, reports the following winnings this season at New York State Fair. On Rose Comb Reds, 1st, 2nd and 5th hens; 1st, 2nd and 3rd cockerels; 1st, 2nd and 4th pullets; 1st, 2nd and 3rd cocks; 1st old pen; 1st young pen. At Allentown Fair, 1st and 2nd cock; 1st and 2nd hen; 5th cockerel; 2nd and 5th pullets; 1st pen. At Hagerstown on Single Combs, 1st hen; 1st and 3rd cockerel; 1st and 3rd pullets; 1st pen; no cock shown.

A. G. Clark, proprietor Ridge View Farm, Willoughby, Ohio, reports the following winnings at the late Kansas City Show: 1st pen; 1st hen; 1st and 2nd pullet; 3rd cock; 3rd and 5th cockerel. His first prize pen was said to be the best pen of Rose Comb Rhode Island Reds ever shown at Kansas City. He also won shape and color specials. Write him for full particulars about his Reds and mention American Poultry Journal.

J. I. Blake, Galesburg, Mich., reports the following winnings at the late Michigan State Poultry Show, Detroit, Mich.: 1st and 2nd cock; 2nd cockerel; 2nd pullet; 2nd pen. Won shape and color specials for cock, cockerel and pullets. Four silver cups, cash specials, water set for best display on Single Comb Reds. 210 R. I. Reds in class. E. T. DeGraff, judge.

Are you troubled with a disordered stomach? If you are you should try a bottle of Bromo-Seltzer. Thousands upon thousands are being relieved every day. Why not you? There is no more reliable remedy on the market. This can be obtained at any drug store and makes a very pleasant and palatable drink. If you try it once you will always keep it on hand for emergencies.

H. H. & E. M. Coburn, Memphis, Mich., have sold their entire stock of Columbian Wyandottes, including their Chicago winners, to Walter Fenton, of Mt. Clemens, Mich. Our readers will please take notice of this and address Mr. Fenton if they are looking for something in this line.

Pays for one year's subscription to American Poultry Journal and a copy of "How to Build Poultry Houses—A 64-page book on poultry house construction.

BIG MONEY IN POULTRY AND SQUABS.

If you are interested in the poultry business you will find it to your advantage to obtain Foy's new book, "Money in Poultry and Squabs," advertised elsewhere in this issue. It is one of the finest and most valuable books of the kind ever published. It is finely illustrated and contains a very large amount of practical information about the poultry business in general and is valuable as a reference book, telling the beginner how to start on a small or large scale and how the largest pure bred poultry business in the world has been built up from a small beginning, tells how to start right and how to make money raising fowls on the farm, how to line breed, how to prevent and cure diseases, how to run an incubator and manage a brooder. This is the most valuable book for the beginner in poultry and squab raising ever published. This book will be mailed for four cents by addressing Frank Foy, Box B, Des Moines, Iowa.

Outspoken Maiden.—You are right, my dear, it isn't always those with the most money to spend who are the most tastefully dressed.

I have two acquaintances in mind this very minute. One is the daughter of a retired farmer, who takes her liberal allowance and literally squanders it on dress. She buys some of the most elaborate gowns regardless of how unbecoming they may be. In some of them she looks like a perfect fright.

The other girl has to count her pennies, yet she always looks dainty and stylish in her simple dresses. She told me that she made them herself, and the material cost very little. She gets the Simpson-Eddystone Prints in many beautiful designs—sometimes the Black and Whites, or the Silver Greys, or the Fast Hazel Brown. She uses a simple trimming, and the effect is surprisingly becoming.

That's the difference in the two girls. I am sure you have the right idea, and I believe you could make just as effective and inexpensive dresses of these materials as the second girl did.

We desire to call the attention of our readers to the advertisement in this issue of Mr. Frank Churchill Sibley, of South Bend, Ind., breeder of Rose Comb

Rhode Island Reds, "exclusively." Mr. Sibley is an enthusiastic breeder of Reds, and has in the last few years built up a flock of these popular birds which have demonstrated their merits in the largest shows, under the hottest of competition, and, as stated in the January issue of the American Poultry Journal, his birds show

large amount of competition and the quality of the "Reds" which were exhibited at this time, which was pronounced by the judges as better than ever before.

The Morgan Poultry Farm, of Beloit, Wis., R. R. 2, won at Southern Wisconsin Poultry and Pet Stock Association, Janes-

Prize winning Light Brahmas. Owned by E. J. Barker, Thorntown, Ind.

quality in all ways. They have the typical Rhode Island Red type, also the color and size and his yards stand, without question, in advance or at the head of all breeders of this class of birds. His winnings at Chicago were the largest made by any one exhibitor during the show and are remarkable, considering the

ville, Wis., January 4-9, 1909, as follows: 1st cock, 2nd cock; 1st, 2nd, 4th cockerel; 2nd, 4th hen; 2nd, 3rd, 4th pullet; 1st pen. Special for highest scoring cockerel. American Buff Leghorn specials for best shaped male, best colored male, best shaped female. Myers, judge S. C. Buff Leghorns.

JUST A WORD TO POULTRY RAISERS.

It is just as Mr. Thompson, of Fairfield, says: "Don't kill the hen that lays the golden egg, by setting her to hatching chickens for you." The biggest profit in the poultry business comes from keeping your hens laying all the time and employing incubators to do the hatching for you.

Now we believe most poultry-raisers are convinced of the advantages of owning an incubator of the right sort. In buying your incubator it is worth while to consider two important things. Consider carefully the plan on which the machine is being sold. Be sure that you are buying your machine on a positive guarantee that it will do the work or it will cost you nothing.

You cannot possibly take any risk when you buy your machine on such a plan. Mr. Thompson, of Fairfield, is selling his machines on just that sort of a plan.

The Fairfield incubator which Mr. Thompson sells is an exceedingly good machine. It has the best heating system in any incubator made. The heating system of the Fairfield insures a perfectly uniform heating throughout the incubator.

The Fairfield heating system is protected by exclusive patents so it will be found only in this machine. His incubator is made well from start to finish. It is made of California redwood lumber in the box, a high grade copper is used in the construction of the heater. The very best kind of a lamp goes with the machine.

We are very glad to call our readers' attention to this splendid incubator and this square dealing way Mr. Thompson has of selling his machines.

It will pay you to write him for his catalogue and special offer and let him ship you his machine on the positive guarantee that if you are not satisfied it will cost you nothing.

Write him today for his catalogue. You will see his advertisement on another page of this paper.

As usual, one of the first catalogues to reach us this season is that of the old reliable Iowa Seed Company, of Des Moines, Iowa. We see that it has been very much enlarged over previous years, now containing 132 pages, crowded with large and varied lists of the best seeds, plants, bulbs, garden tools and nursery stock. The descriptions are well and concisely written, without exaggeration and it is profusely illustrated. Nine leading varieties of corn introduced by the Iowa Seed Company and several plant novelties are shown in natural colors on the two beautiful color-plate pictures and the cover is handsomely lithographed in seven colors. An unusual feature in seed catalogues that will be appreciated by recipients of the book, is a section devoted to cut flowers and floral designs, and to cage birds and gold fish. The Iowa Seed Company is favorably known to most of our readers, advertisements of the firm having appeared in our columns for many seasons past. We regard them as friends rather than business acquaintances and would advise those of our readers who do not receive their catalogue to send for a copy.

William Cook & Sons, originators of all the Orpingtons, of Scotch Plains, N. J., won at the last Madison Square Garden show, 1909, nineteen 1sts and ten 2nds; also numerous cups and medals, more than five times the number of 1sts than any other Orpington breeder. In S. C. White Orpingtons they won 1st and 2nd cockerel, 1st and 2nd pullet, 1st, 3rd and 5th pens, 3rd hen and 5th cock. They refused \$1,000 for their best white cockerel, which they are keeping to sell eggs from. The price of their best eggs, all varieties of Orpingtons, is only \$10 a setting and others from fine stock \$5 a setting. Every order has Mr. P. A. Cook's personal attention and everything they ship is guaranteed to give satisfaction, this being backed by a reputation of thirty-five years' standing.

Elmer V. Shultz, of Webster Grove, Mo., won at St. Louis Poultry and Pet Stock Association, St. Louis, Mo., November 23-29, 1908, as follows: 1st and special on cock; 1st and special on hen; also 3rd and 4th hen; 1st and special on pullet and 2nd, 3rd and 4th pullet. Daniel P. Shove, judge of S. C. Brown Leghorns.

J. H. McDaniel, of Warsaw, Ky., won at Chicago, December 15, 1908, as follows: Golden Wyandotte, 1st cock; 1st pullet. Chas. McClave, judge.

COREY'S GOLDENGLOW STRAIN OF BUFF PLYMOUTH ROCKS

The Champion of New England

As a breeder and exhibitor of Buff Rocks for twelve years, my past and present winnings make the above statement an acknowledged fact. At the great Boston Show, January 12-16, 1909, on eleven entries my Buffs won fourteen ribbons and all association cash specials for best display, best cock and four hens; best cockerel and four pullets; also winning the State Cup for best cock, hen, cockerel and pullet; also the District Cup, comprising all of the New England states, for best cock, hen, cockerel, pullet and pen. This is acknowledged to be the grandest victory ever won at Boston on Buff Rocks.

I have bred and sold winners all over the Union. They have been sold and shipped to Japan for government breeding purposes. I bred and sold the second pen at the World's Fair, St. Louis, and many New York winners, and "best of all, I breed all my winners."

Shall have a few settings from these winners for sale, at \$5.00. A limited number for sale. Would advise placing your orders early. Circular free. Address

M. J. COREY, 900 Summer Avenue, Springfield, Massachusetts

MODERN PROGRESS IN INCUBATOR BUILDING.

After having watched the passing of numerous ingenious contrivances that have come and gone in the incubator world during the last decade it is pleasing to see the ordinary, sensible improvements that have been inaugurated in the Phillips Utility Incubator this season.

These improvements seem so ordinary and commonplace that one wonders that they have not been adopted generally years ago, yet here they are, evidently never thought of before.

Some of the incubators of the early days were made without glass doors or any way of reading the thermometer without opening the machine. The advent of the glass door seems to have been quickly accepted as settling for all time the question of how to read the thermometer without opening the incubator.

It was considered advisable not to take the temperature close to the glass door but place the thermometer back from the front a little. In order to read the thermometer in the position it was found necessary to extend the glass a little above the top of the eggs so that by crouching before the incubator one could look in at the thermometer.

Having the door extend above the egg level allowed a great portion of the warm, moisture-laden air to escape from the incubator each time the door was opened for turning the eggs, thus drying out the eggs rapidly when the operator failed to supply the artificial moisture needed to quickly replace that lost in this way. This fact has been largely responsible for the much-talked of moisture problem.

Now, when one sees the improved Phillips Utility Incubator, with its thick solid door, reaching just high enough to allow the trays of eggs to pass in and out, and its small double glass window above the egg level, giving a clear view of the interior of the egg chamber, all the way to the back, one naturally wonders how this improvement escaped incubator manufacturers so many years.

Passing to the egg trays one recollects that several ingenious methods for turning the eggs have from time to time been introduced. It has long been realized that a slatted bottom tray, properly de-

signed, will hold the eggs in rows so that they may be easily turned by slightly elevating one end of the tray, removing an egg from the lower end of each row, allowing the other eggs to gently roll down and then placing the removed egg in the place left vacant at the upper end of the row. A great objection to the slatted tray has been that the chicks fell into the spaces between the slats and became wedged there. Some operators have overcome this difficulty by placing a sheet of wire screen inside the bottom of the tray just before the chicks hatched but that of course necessitated removing the eggs from the trays and then placing them back again. Phillips has gone one step farther and tacks a screen across the outside of the bottom of the tray, thus leaving the grooves on the inside of the bottom of the tray for holding the eggs in rows and at the same time preventing the chicks from dropping between the slats and becoming wedged there.

Down below the egg tray is the chick tray. While this is not an exclusive Phillips feature the Phillips method of making the bottom of the machine into a sliding tray that is easily removed for washing after each hatch seems about the simplest thing in this line that is in use.

Phillips clearly describes his machines in a neat circular, a copy of which he will mail to any person requesting it. If you want one just write a postal card to George Phillips Incubator Works, Box 3301, Ridgewood, N. Y.

Mr. Frank Churchill Sibley, of the Old Colony Yards, South Bend, Ind., breeder of Rose Comb Rhode Island Reds, is by far the largest prize winner of any one variety of birds exhibited at the Michigan Poultry Show, having won 1st, 2nd, 3rd and 4th on cocks; 1st, 2nd, 3rd and 4th on hens; 1st, 2nd, 3rd and 4th on cockerels and 1st and 5th on pullets, as well as the 1st and 2nd pen in this class of birds. Mr. Sibley has been one of the large prize winners for the last number of years, having shown at Detroit in 1906, 1907, 1908 and this year, and in each instance having carried away the large bulk of prizes in this class of birds. At Indianapolis, in September, 1908, he won 1st, 2nd and 3rd on cocks; 1st and 3rd on hens; 1st and 3rd on cockerels; 1st, 2nd and 3rd on pullets; also 1st and 2nd on

pen and 1st on display. At Chicago, December, 1908, he won 2nd and 5th on cocks; 1st, 4th and 5th on hens; 1st and 3rd on cockerels; 1st, 4th and 5th on pullets; 1st on pen; 1st on best display of Rose Comb Rhode Island Reds, and 1st on display of best of either Rose or Single Comb varieties; the four club ribbons for shape and color, winning in all at Chicago seventeen prizes on fourteen entries, including ten 1st prizes and seven others. Mr. Sibley's birds are acknowledged by all breeders of the Rose Comb class to be equal to, if not superior, to any others.

In addition to the above prizes awarded Mr. Sibley at the Detroit show, he also won the Mayor's silver cup, the Association silver cups, as well as several cut glass premiums. These awards were placed on his flock by Judge DeGraff, the acknowledged authority on Reds, which speaks very highly for the quality of Mr. Sibley's birds.

We wish to call the attention of our readers to the advertisement of Mr. Harry M. Lamon, Watertown, N. Y., which starts with this issue of the American Poultry Journal, of his northern raised White Plymouth Rocks, "the hardy kind." Mr. Lamon is well known to the readers of the American Poultry Journal as a Buff Leghorn and Barred Rock breeder, having produced many of the best birds exhibited at the leading shows all over the country. His record as a producer of winning Buff Leghorns we believe has never been equaled. From 1899 to 1904, after making a phenomenal winning at Madison Square Garden in New York, Mr. Lamon sold his good will in his Buff Leghorns and nearly all his Barred Rocks and since then has been perfecting his strain of northern grown White Plymouth Rocks, "the hardy kind." We know Mr. Lamon personally and believe he will back up all he says. No better stock is to be had. Look up his ad.

Carver & Avey, of Columbia City, Ind., won at Chicago as follows: Partridge Wyandottes, 3rd cock; 1st hen; 3rd cockerel; 2nd pullet. Silver Penciled Wyandottes, 2nd cock; 1st hen; 2nd cockerel 2nd pullet. Columbian Wyandottes, 3rd cock. Chas. McClave, judge.

HOW OFTEN WE HEAR THE REMARK

**"Kellerstrass"
White Orpingtons**

Are the Highest Priced Chickens in the World

Read the following testimonials—we have thousands of them on file in our office—then send for our Catalogue; read it through and you will know why "Kellerstrass BIG EGG LAYERS" bring the highest prices of any chickens in the world

Fifteen Chicks from Fifteen Eggs.

Mr. Ernest Kellerstrass,
Kansas City, Mo.

Dear Sir:—I write this to let you know the wonderful hatch I had from the setting of eggs I bought from you on the 12th of April last. Well, sir, I GOT FIFTEEN

Still Have Twenty-One Left.

Mr. Kellerstrass,
Kansas City, Mo.

Dear Sir:—As I got two settings of eggs from you this spring I thought I would let you know about them. Out of one setting I had ELEVEN and out of the other TWELVE little chicks. It is about two months since they were hatched and I STILL HAVE TWENTY-ONE LEFT. One of the others was killed by accident. I think that was good for shipping so far. I am well pleased with them. I hope I can raise the rest now. Respectfully yours,

FRANK BAYER,
Dodge, Neb., 6-11-08.

Fourteen Out of Fifteen on Time.

Kellerstrass Farm,
Kansas City, Mo.

Gentlemen:—Last evening, "on time," I found FOURTEEN (14) CHICKS FROM

set them Monday, the 30th, and got a hatching of TWELVE LITTLE CHICKENS FROM FOURTEEN EGGS, one of the eggs being cracked; it had been done in the nest, as they showed no signs of damage in any way. The CHICKS ARE VERY SPRY AND NICE, and I am well pleased with the looks of them, and I am sure I will have the "WHITEST" chickens in this part of the country, as there are no Crystal White Orpingtons in this part of the country that I know of. I thank you for your honest dealing, and will want eggs from better mating the next time I order.

Yours truly,
LEWIS B. TRUSSELL,
Crothers, Pa.

Hatched Twenty-four.

Kellerstrass Farm,
Kansas City, Mo.

Gentlemen:—I make the following report: From yard 30, two settings, thirty eggs, all in good condition, received March

CHICKS OUT OF THE FIFTEEN EGGS and have fourteen living today, the 29th, and they are fine.

I have bought lots of eggs from the different people, but I must say that you are THE MOST HONEST IN ALL THE LOT.
HARRY ARMSTRONG,
Mystic, Iowa, 5-29-08.

Got Eleven Chicks.

Mr. Kellerstrass,
Kansas City, Mo.

Dear Sir:—Would say that I received my setting of eggs in good shape and took pains to pick out one of my best hens to set them under. I made her a nest in front yard; she set fine; never broke an egg, but I got ELEVEN CHICKS. The other four eggs were not hatched, or had been spoiled in shipping, for they had not started to hatch, so I think the old hen done her part.

Yours for Orpingtons,

R. C. BETZER,
Huckman, Neb., 5-28-08.

THE FIFTEEN EGGS PURCHASED FROM YOU. The fifteenth egg was not fertile, otherwise would have had fifteen White Orpingtons.

Yours truly,
D. J. HUTCHINSON,
South Pasadena, Cal., June 15th, 1908.

Eleven Fine Strong Chicks.

Mr. Ernest Kellerstrass,
Kansas City, Mo.

Dear Sir:—Feel it my duty to report the result. On May 12th I had a hatch of ELEVEN (11) STRONG CHICKS from your eggs, and they are all doing splendidly so far.

Yours respectfully,
ROBERT O. JONES,
Lannon, Wis., 5-28-08.

Twelve Hatched.

Kellerstrass Farm,
Kansas City, Mo.

Gentlemen:—I received the eggs I ordered from you Saturday, March 28th, and

23d, 1908, set March 24th, under one black hen and one red hen. The black hen broke one egg in nest and HATCHED FOURTEEN CHICKS OUT OF THE FOURTEEN EGGS. The red hen HATCHED TWELVE CHICKS OUT OF HER FIFTEEN EGGS, but another hen killed two and one died in the nest; one egg was infertile and the other had a dead chick in it. So we took off twenty-four nice, fine chicks and have them all yet. They are all we expected, "just splendid," and we are greatly pleased.

Yours truly,
A. ODELL,
Pond Creek, Okla., 6-1-08.

Hatched Twelve Fine Chickens.

Kellerstrass Farm,
Kansas City, Mo.

Gentlemen:—HATCHED TWELVE FINE CHICKENS out of setting of eggs from you and they are beauties. Am going to try to raise all of them if care will do it.

Yours truly,
W. F. GERHART,
Pocahontas, Iowa, 5-29-08.

Twelve Chicks, as Fine as Can Be.

Kellerstrass Farm,
Kansas City, Mo.

Gentlemen:—Received the Orpington eggs in due time and set them under two hens. From the setting of fifteen we got TWELVE LITTLE CHICKS AS FINE AS CAN BE, all in good condition, and we are well pleased with the hatch.

Thanking you for past favors, I remain

Yours truly,
R. D. HALL,
Lyons, Kans., 6-9-08.

Every One of the Fifteen Hatched.

Mr. Ernest Kellerstrass,
Kansas City, Mo.

Dear Sir:—The setting of hens I got from you hatched out this week, Wednesday, and to my delight and surprise EVERY ONE OF THE FIFTEEN HATCHED. THEY ARE A FINE BUNCH. The weather

Will you have any eggs at reduced prices after hatching season is over?

Very truly,
JAS. E. CUMMINS,
Kenwood Park, Iowa, 5-18-08.

Fifteen Hatched.

Kellerstrass Poultry Farm,
Kansas City, Mo.

Gentlemen:—We received the two settings of eggs O. K., and placed them under two hens. One hen hatched out FIFTEEN CHICKS and the other HATCHED ELEVEN. There were only four infertile eggs in the thirty. Respectfully yours,

JAMES MARSH,
Greenwich, Conn., 5-15-08.

Fourteen Hatched; Doing Fine.

Ernest Kellerstrass,
Kansas City, Mo.

Dear Sir:—I would have had FOURTEEN of your Crystal White Orpingtons if the

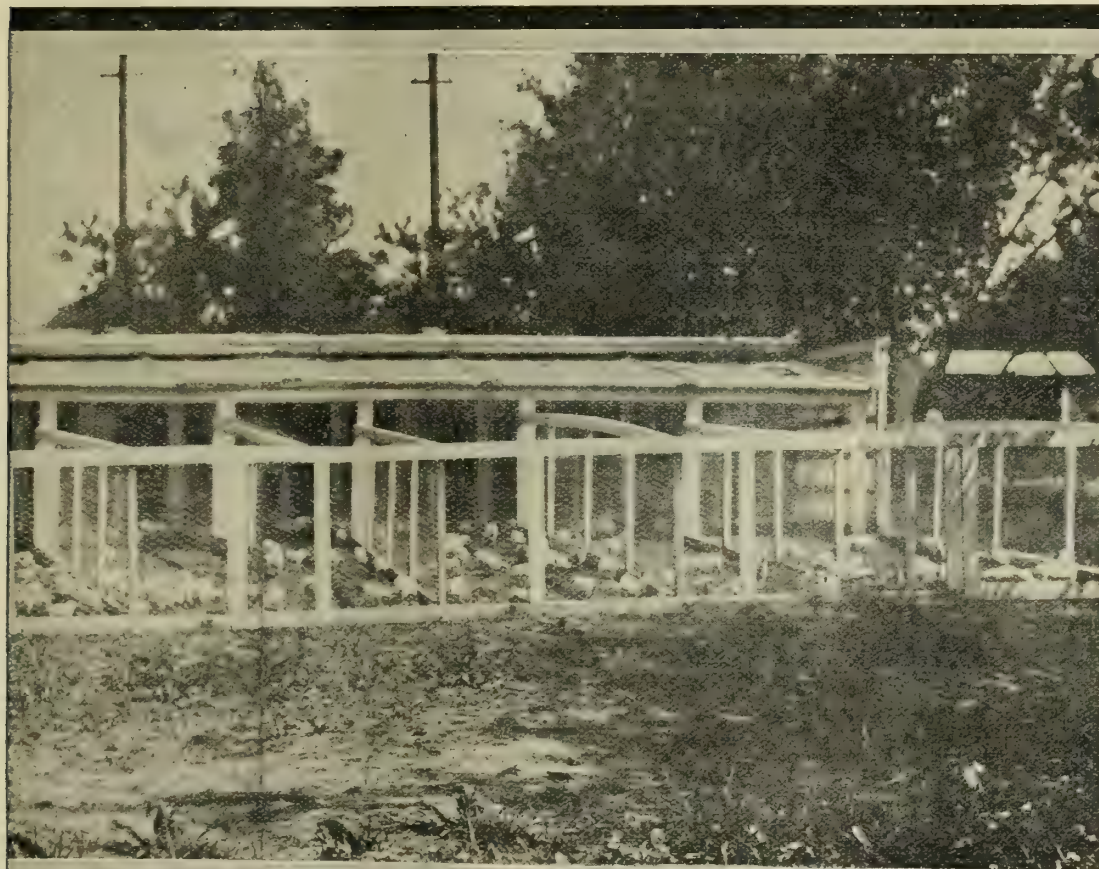

and I have hatched ELEVEN NICE CHICKS, but the bad weather killed five of them. Do they feather out rapidly or not? Can I expect any show birds from what I raise or will it be at all unlikely for me to get any? What points do they have to carry them to 93 or 94 score? If not taxing you too much, give me the points, as I am a new beginner with the Orpingtons. Yours respectfully,

B. G. LEE,
Cochran, Ga., 5-17-08.

Fourteen and Twelve Hatched.

Mr. Ernest Kellerstrass,
Kansas City, Mo.

Dear Sir:—I have been intending to write to you telling you what good luck I had with the two settings of eggs I bought from you, but I have been very busy and sick on the side. I have FOURTEEN CRYSTAL WHITE ORPINGTONS out of the first setting and TWELVE OUT OF THE SECOND. I think that is just fine.

THE KELLERSTRASS FARM KANSAS CITY, MO.

for the past three weeks has been as bad as possibly could be for hens setting, but my sister took the best care of the hen all the time, with good results, and I feel proud of the lot of chicks. Yours truly,

W. E. MAST,
Burlington, Iowa, 6-5-08.

**Shipped 325 Miles—Moved Three Times
—Hatched Fourteen Out of
Fifteen.**

Mr. Ernest Kellerstrass,
Kansas City, Mo.

Dear Sir:—I write to inform you that I got FOURTEEN LIVELY WHITE ORPINGTONS FROM THE FIFTEEN EGGS I ordered from you on April 16th. All are lively and doing finely. They began hatching last Thursday. I consider the hatch remarkable, as they were shipped 325 miles in the first place, and they were moved three different times after incubation began on account of difficulty in getting hens to properly attend them. The eggs seem to have remarkable vitality as well as fertility.

rats had not killed one of them. THEY ARE DOING FINE. I hope I can raise them. How do you sell eggs in August and September?

Yours truly,
MRS. GEO. KIRCHNER,
Donnellson, Iowa, 6-14-08.

Twelve Healthy, Strong, Chicks.

Mr. E. Kellerstrass,
Kansas City, Mo.

Dear Sir:—I have received one setting of eggs and got TWELVE HEALTHY AND STRONG CHICKENS out of the fourteen eggs; one egg was broken when we received them. The little chicks are now about ten days old, and every one is growing and as healthy as I have ever seen any.

Yours truly,
DR. A. W. GRUEBEL,
Concordia, Mo., 5-26-08.

Eleven Nice Chicks.

Ernest Kellerstrass,

My Dear Sir:—Your eggs came all right

The CHICKS ARE JUST AS LIVELY AND STRONG AS ANY I EVER SAW, and no doubt will make me a flock of good, No. 1 birds.

I wish to thank you for your kindness and courtesies, and wish you the continued success of selling fine chickens.

Yours very respectfully,
GUY COLEMAN,
Platte City, Mo., 5-22-08.

Twelve Chicks Hatched.

Ernest Kellerstrass, Esq.,
Kansas City, Mo.

Dear Sir:—I take pleasure in informing you that the last setting of eggs you sent me I set under a hen and she hatched TWELVE CHICKS. Every fertile egg hatched. THEY ARE ONE WEEK OLD TODAY AND ALL STRONG AND HEARTY. THEY ARE A NICE FLOCK FOR ONE HEN AND ARE ADMIRABLE BY EVERY ONE WHO HAS SEEN THEM.

Yours truly,
M. E. JORDAN,
Lyons, Iowa, 7-28-08.

Mica-Crystal

The Grit That Make Hens Lay Contains Mica, Iron, Magnesium and Quartz, each in its purest and best form. It is of such peculiar formation that it will not take a polish as is the case with grit made from white quartz or marble, and unlike limestone grit, or grit of like soluble substance, is not dissolved by the fluid, in the crop, consequently it never loses its sharpness. It sharpens itself by contact, the only grit that does, and therefore excels all others as a grinder. Without grit the feathered tribe cannot be healthy or productive. This is a well demonstrated fact in nature. Grit is to the fowl what teeth are to other members of animal creation. The standard for 15 years. Will send you small sample by mail if desired. Manufactured only by

MICA CRYSTAL CO.

CONCORD, N. H.

\$100.00

ONE HUNDRED DOLLARS IN CASH PRIZES

\$100.00

Given to the following named users of the Golden Rule Incubators for the season of 1908

Mrs. Rosa E. Combs, Greenville, Ohio; 244 fertile eggs, 236 chicks, 3 hatches 96.7 per cent **\$15.00**
 George E. Craig, Shirley, Ind.; 600 eggs, 574 chicks 3 hatches, 95.6 per cent **\$15.00**
 R. I. Payton, Judson, Ind.; 490 eggs, 465 chicks 94.9 per cent **\$15.00**
 Mrs. L. P. Wells, Kevil, Ky.; 379 fertile eggs, 359 chicks, 3 hatches, 94.72 per cent **\$10.00**
 Chas. W. Palmer, Mechanicsburg, Ind.; 530 fertile eggs, 494 chicks, 3 hatches, 93.2 per cent **\$10.00**
 John W. Miller, Middletown, Ind.; 416 fertile eggs, 382 chicks, 3 hatches, 91.8 per cent **\$10.00**
 Charles Zirkle, Middletown, Ind.; 568 fertile eggs, 519 chicks in 3 hatches, 91.4 per cent **\$5.00**
 Luther McCormack, Mechanicsburg, Ind., 464 fertile eggs, 415 chicks in 3 hatches, 89.4 per cent **\$5.00**
 J. J. Miller, Hartford City, Ind.; 458 eggs, 404 chicks in three hatches, 88.6 per cent **\$5.00**

Albert Maddy, Cadiz, Ind.; 510 fertile eggs, 440 chicks in 3 hatches, 87 per cent **\$5.00**
 Mrs. Lois E. Lodge, Middletown, Ind.; 353 fertile eggs, 303 chicks in 3 hatches, 86 per cent **\$5.00**
 Total 5000 fertile eggs and 4591 chicks in 33 hatches by eleven different operators, giving an average of 92 per cent. \$100.00 will be paid for any incubator that will bring out an equal number of chicks from any given number of eggs with the same expenditure of money, time and labor. The Golden Rule is no "dude," so never smokes, therefore no need of an automatic smoke and fire extinguisher. Neither is a hygrometer or moisture gauge necessary, for this is all provided for. These machines have no superior as a hatcher at any price, and with reasonable care will last for 20 years. Price of 200 egg size only \$10.50 delivered at your station freight paid. Other sizes at corresponding rates. Send for catalogue.

GOLDEN RULE INCUBATOR CO.

MIDDLETOWN, IND.

THE CHAMPION BROODER DOWN TO The Ground

Chicks run out directly on the ground, no platform to climb, no legs to break off. It's "the top notcher" in brooders. Used either out-doors or in-doors winter and summer; no need of expensive brooder houses if you use the Champion. Over 100,000 in use. Everybody delighted and "how they do talk" about them: "I will replace my high priced brooders with Champions." "I have used my Champion for six years and have raised hundreds of chicks in it. It's the best ever." "It beats them 'em all hollow, etc." New safety. No-chimney lamp. Absolute safety from explosion and fire. Largest in size, lowest in price. Only \$6.50. Catalog free.

Schwab Bros., Box 452, Irondequoit, N. Y.

TALK ON ARTIFICIAL INCUBATION.

In artificial incubation there has, in the past, been too much of the haphazard and guesswork. Other fields have been explored in a scientific manner and definite rules and methods of procedure adopted.

It is a matter of common knowledge among artisans, chemists, and scientists, that the same conditions will always produce the same results. A baker takes so much flour of known quality; a certain definite and measured amount of other ingredients; a stated amount of kneading; a certain period in measured temperature for rising; and a correct heat for baking. The result is good bread every time.

The chemist and the scientist likewise know that the same good results are always secured by the same correctly measured conditions. Nearly every chemical element and mixture has been placed upon a strict scientific basis as also all manufactured products, the breeding of animals and the products of the soil.

The scientific farmer takes a certain seed and on proper soil, with suitable cultivation and correct amount of heat and water, he produces one hundred bushels of grain from each acre of land. He measures everything except heat. That must be supplied by Nature.

The unscientific farmer can take the same seed, work just as hard and not get fifty bushels per acre.

In artificial incubation guesswork has ruled until recently. Most people have supposed that only a certain well regulated degree of heat was necessary for hatching a fertile egg. No attention was paid to other essentials of heat distribution, moisture and ventilation measurement and regulation, nor to the effect of the incubator during the embryonic stage upon the strength and vigor of the chick at hatching time and, as a consequence, its future growth and maturity.

George H. Lee, of Omaha, Neb., has no doubt conducted more experimental and recorded hatches than any other person in this country or, for that matter, in the world. He places the number at more than one thousand and each succeeding hatch has led to a better and better understanding of what constitutes proper conditions of incubation, not only as regards more uniform hatches but also greater strength and vigor of the newborn chick.

He has observed that certain different conditions during the hatching period will produce equally good percentages of hatch but vastly different results during the first six weeks' growth of the chick. Some chicks produced nearly double the growth of others during the same period and all owing to different conditions during incubation.

There is also to be considered difference in loss through disease and death. Some hatches produced chicks that weighed 30 pounds per 100 chicks at an age of three weeks and with comparatively no loss, while others produced equally good hatches of chicks that, under same brooding, feed, care and attention, did not weigh more than 20 pounds per 100 at three weeks of age and with nearly 50 per cent loss through disease and death.

As a result of the immense number of experiments by Mr. Lee, accurate data has been arranged so that it is known to a certainty just how much heat, moisture and ventilation is needed to produce a perfect chick which will grow and thrive with best increase in weight and least percentage of loss.

It requires not only a correct and well-regulated degree of heat but also, what is more important, a proper distribution of heat so that each egg receives a proper share; also measured and well-regulated moisture or air humidity for rotting the shell and a regulated amount of ventilation or passage of air through the incubator to work in conjunction with heat and moisture for the greatest possible strength of chick and the weakest possible strength of shell at the hatching point.

Mr. Lee has given free to all incubator users the results of his investigations, as embodied in the "Mandy Lee" Incubator and the only sore spot in the whole procedure has been in the commercial aptitude of other incubator manufacturers in claiming, for their credit, inventions which they have had no part in formulating and in which they have no property right in fact, owing to patents issued to Mr. Lee.

Moisture regulation is absurdly simple, while moisture measurement is all-im-

portant. Geo. H. Lee has been first to invent and patent such a system and a correct instrument for measuring at temperatures of 102 to 105 degrees, the exact humidity of an incubator egg-chamber. He has been first to determine the conditions necessary in the egg-chamber of an incubator, without regard to conditions existing in the outer air, for producing the best hatch and the best growth and least loss of chicks succeeding the hatch.

Percentage of hatch does not count for much. The biggest hatches sometimes produce the least weight of chicks at six weeks of age. What is wanted is the best percentage of hatch and the best percentage of growth and maturity and this is only secured by correct conditions during each and every one of the twenty-one days of incubation.

We give credit to the man who has made two blades of grass grow where one grew before and we must give equal credit to the man who makes two pounds of chicken grow where one grew before. It is a simple commercial proposition, but one made possible only by careful observations extending over a period of years; painstaking experiment and inventive genius.

Mr. Lee is one of the very few incubator manufacturers who is an expert incubator operator. A poultry fancier for many years and an enthusiastic experimenter along mechanical, chemical and electrical lines, his first entry in the field of artificial incubation was not from a mercenary standpoint but from a love of experiment and to help certain friends as well as himself in bettering their hatches.

Incubators as existing five years ago, and many of them the same at the present day, were absurdly irregular. Dependent entirely upon outside conditions of temperature, humidity, season, climate and altitude, they brought hatches sometimes of 90 per cent but more often of 40 or 50 per cent.

After a few experiments Mr. Lee adopted the simple expedient of ignoring outside conditions and building an incubator in which every essential of incubation could be regulated inside the egg-chamber or at the eggs. As a scientist he understood that, giving the same conditions, the same results would be produced every time.

Work along this line involved two things: First, finding what was necessary to hatch a strong chick from every fertile egg and, second, to build an incubator and provide appliances whereby such conditions can be reproduced at any and all times. There must be no guesswork or commercial prevarication when working from a scientific standpoint. It will not do to publish ones best hatches and allow the public to regard them as an average or usual result. That which is on a strictly scientific basis can be duplicated every time.

In the "Mandy Lee" Incubator hatches of 90 per cent or better are produced every time without regard to situation, outside temperature, climate, season, weather, or altitude. In addition to this, it produces chicks that will grow and thrive even better than average hen-hatched chicks because there is duplicated every time by actual measurement and regulation, not merely average conditions but ideal or best conditions.

It is urged by some of the old timers

that the "Mandy Lee" is complicated. So is the Waltham watch more complicated than a sun-dial; a modern self-binder more complicated than the old-fashioned scythe, but who would exchange. There are truly more points to watch and to regulate but it is all so simple, when once understood, as to require only ten minutes a day—five minutes night and morning, for attention.

Mr. Lee declares and, we believe consistently, that he can at all times predict the hatch within 5 per cent after the final testing. He is as confident of getting 90 per cent or better as we are of sitting down to breakfast tomorrow morning. Scientific certainty surely beats guesswork and to Mr. Lee should be given the credit for advancing artificial incubation to a safe, sane and certain basis.

MAKE MONEY IN MARCH.

March is the money-making month for poultry. Chicks hatched in March reach the early market when prices are highest for friers and broilers. March chicks get through the fall molt and are in good condition when winter sets in. They are the best winter layers. Therefore, force

GOLDEN RULE INCUBATOR

Above cut shows one of the many successful hatches taken off with this machine. Made by the Golden Rule Incubator Co., Middletown, Indiana.

your hens to lay in March and get your hatches started. Three weeks is sufficient time to put hens into laying condition, even though they have not been laying all winter.

The rules are simple: First, feed the proper food. Second, prepare it properly. The best food for forcing hens to lay, as all poultrymen acknowledge, is fresh cut raw bone. It contains all the elements of the egg and the hen just changes the form from bone to egg. This fresh cut raw bone, properly prepared in a Humphrey bone cutter, produces eggs naturally and without drain upon the hen's strength, and the eggs possess greater fertility, in turn producing stronger chicks.

A piece of bone the size of a man's

fist will feed 20 hens and naturally and easily, force them into laying condition. Humphrey's book of "Poultry Helps" tells you not only how to prepare and feed fresh cut raw bone to get eggs, but is full of timely suggestions for the poultrymen who want more eggs and healthier chicks. A copy of this book is in our reference files and we would like to know that every one of our readers has a copy. Address Humphrey, White St. Factory, Joliet, Ill., and they will send it to you.

It seems to us to be the duty of the publisher of a reputable paper, as far as lies in his power, to protect his readers from unscrupulous dealers and to call their attention to articles of real merit, and we take pleasure in this issue in calling your attention to the Hagood Plow Company, of Alton, Ill., who have for years prided themselves on the quality of their plows, harrows, cultivators, planters and other farm implements, buggies, harness, wagons, stoves and ranges, gas engines, separators, hay presses, etc., etc.

We firmly believe that they spare no pains and expense to give to their customers the greatest value that money can buy. They are the only manufacturers of plows and implements in the world who sell their goods direct to the consumer at wholesale prices, thus saving all middleman's profits. Their goods are all made on honor and each article is sold on a positive guarantee. We are strongly of the opinion that it would be very much to your interest to write at once for their catalogue, so that you can compare their prices with others who make big claims.

Willard J. Thorniley, of Marietta, O., won at Marietta, O., January 6-12, 1909, as follows: 1st, 2nd, 3rd, 4th cock; 1st, 2nd, 3rd and 4th cockerel; 1st, 2nd, 3rd and 4th hen; 1st, 2nd, 3rd and 4th pullet; \$50 gold-lined silver cup for ten highest scoring parti-colored birds, in a class of over 300 birds; silver cup, valued at \$75, for largest entry in the show, and several gold and silver specials. This was the third and largest show ever held in southeastern Ohio. Eighty in Ancona class. Thos. S. Falkner, judge.

Mishler's R. C. B. Minorcas have not only won the leading prizes at the Jamestown Exposition and the Indiana State Fair but have gained the Championship of the West by winning at the great Chicago show, December, 1908, 1st and 4th cocks, 1st and 5th hens; 2nd, 3rd and 4th cockerels, 2nd pullet, 1st and 3rd pens and the silver Challenge Trophy Cup for best display in this, the largest class of R. C. B. Minorcas ever shown in Chicago. Catalogue for 1909 will be ready soon. Send two 2-cent stamps for copy. Full of illustrations. Let me know your wants in stock or eggs. Lloyd C. Mishler, R. R. 1, North Manchester, Ind.

M. Guckel, of Kirkwood, Mo., won at St. Louis Poultry, Pigeon and Pet Stock Association, St. Louis, Mo., Nov. 23-29, 1908, as follows: 2nd, 3rd cock; 1st, 2nd, 4th cockerel; 1st, 2nd, 4th hen; 1st, 2nd, 4th pullet; 1st pen; 2nd, silver loving cup, best display; 2nd cock; 1st, 3rd hen; 1st pen, White Orpingtons; 36 in S. C. Buff Leghorn class; 21 in White Orpington class. Shove, judge.

Forty-Three Varieties

Arnold's Columbian Wyandottes

The above statement is not true and we make no such claim. But listen! When the largest number of Columbian Wyandottes ever seen in one show were exhibited by twenty-two of the leading breeders in America at Madison Square Garden, New York. We won ONE-THIRD MORE POINTS and FIVE TIMES AS MANY SPECIALS as our nearest competitors, winning fourteen special and four silver cups including the CHAMPIONSHIP CUP FOR BEST COLLECTION and when it is true that this season at such shows as Madison Sq. Garden, Chicago and the leading Pacific Coast shows our customers are winning a large share of the blue and red ribbons and that the cockerel that won first and cup special at the largest and most important show in America this season was raised from eggs we sold. Then it seems that the statement at the head of this ad may not be far from the truth. We do claim that there is no breeder in America or the world that can show a better average lot of Columbians than we have in our matings this season. Some breeders have a few good birds to breed from and some have many. There is a difference, and it makes a difference to those who buy eggs and especially to those who buy in hundred lots. Send in orders early. We have a lot of fine birds for sale at right prices. Eggs from exhibition matings at \$5.00 per 15, \$9.00 per 30, \$12.00 per 45 and \$20.00 per 100.

FAMOUS POULTRY MACHINES.

Poultry raisers everywhere will be interested in the two machines shown here. They are the two most popular machines of the famous line of Ideal Incubators and Brooders, manufactured by the J. W. Miller Company, Freeport, Ill.

The above is a cut of our Ideal No. 3 Hot Water Incubator, 240 egg capacity. This is the best sized incubator to buy, no matter whether you are a beginner or a large commercial poultry breeder. It incubates as many eggs as the average poultryman wants to hatch at one time, and serves equally well for those who

constructed that the chicks are safe and comfortable at all times. Ideal brooders are used in large numbers by our largest and most successful breeders.

The Ideal line of incubators and brooders, worked out by J. W. Miller, a practical and life-long poultryman, enjoy a most enviable reputation. It is hard to say whether Mr. Miller is better known for his famous incubators and brooders or for the high grade poultry he has given to the world. But he was a poultryman before he was an incubator manufacturer. Incubators and brooders came as an incident, a necessary incident, of his business. His Ideals (both incubator and

want to bring off smaller hatches. The walls are of three thicknesses of material. The outer wall being of one inch lumber, next to which is placed a heavy sheet of asbestos, then a dead air space and then one-half inch of lumber making the walls three thicknesses of material and one dead air space. The incubator has double glass doors. The heating system is the famous Ideal tubular tank system; both tank and heater are made of heavy copper. The incubator is equipped with all attachments needed for its successful operation, including safety-lamp, regulator, egg tester, egg trays, thermometer, etc.

The Ideal Brooder shown above has the reputation of being a famous chicken raiser. All parts are well warmed. There is no crowding around the lamp and no smothering of weak chicks. It is warmed by hot air, because it is the Miller idea that all brooders should be warmed that way. Its ventilating system is the best, giving a flow of warm fresh air to the chicks at all times. There is no possibility of fumes or smoke from the lamp ever getting to the chicks. Like the incubator, the Ideal brooders are made of the best grades of lumber and are so con-

structed that the chicks are safe and comfortable at all times. They brought success to him and they have done it for thousands of other poultrymen both in this country and abroad.

If you are not using or are not fully conversant with Ideal Incubators and Brooders it will pay you to get acquainted. "Poultry for Profit," the Miller 130-page catalogue, full of illustrations and poultry wisdom, will introduce you. Write for a copy direct to the J. W. Miller Company, Freeport, Ill.

Samuel D. Lapham, Dearborn, Mich., reports the following winnings at the Dearborn, Mich., Show, December 4 to 8, 1908: 1st, 2nd and 4th cock; 1st, 2nd, 3rd and 4th hens; 1st and 2nd cockerels; 1st, 2nd, 3rd and 4th pullets; 1st and 2nd pens. James A. Tucker, judge. 76 Buff Plymouth Rocks in class.

John S. Orr, Augusta, Ky., breeder of Silver Laced Wyandottes exclusively, reports the following winnings at the late Cincinnati Show, 1st cockerel; 1st pen; 4th cock; 5th hen; 5th pullet. He only had six birds entered and won six prizes, besides winning American Poultry Association's Silver Medal for best cockerel.

KEEP YOUR CHICKENS HAPPY.

Don't allow your poultry to become a prey to vermin. That is poor management when such an efficient lice killer as Zenoleum can be had so readily and so cheaply. This famous disinfectant is not poisonous, it does not saturate the house as kerosene does and make it dangerous and likely to burn up at any time, and there is nothing explosive about Zenoleum. Spray the houses, nests and roosts and dip the chicks and fowls themselves. There will be better feeling and more thrift among the grown fowls. There will be more industry and singing among the laying hens, and there will be more eggs than when they stand around fighting lice a good part of the time. It does not cost much. Most every dealer carries Zenoleum in stock and you can get a can for 25 cents. You can get a whole gallon for \$1.50, and that will make one hundred gallons of disinfectant for spraying purposes. Just think how far one hundred gallons of disinfectant will go in the average poultry house. Why it will last you a whole year. Besides Zenoleum is a mighty good remedy for other things besides lice and fleas, for instance, cholera, roup, scaly leg, etc. You could not think of a single investment around the chicken house that would make more money for you than a can of Zenoleum. Zenoleum Powder Lice Killer in a great big sifter top box is only 25 cents. Have you a copy of that little booklet called "Chicken Chat"? You can have one free for the asking if you drop a line to the Zenner Disinfectant Company, 117 Lafayette Ave., Detroit, Mich.

A POULTRYMAN'S NECESSITY.

According to men who know—poultry keepers who are practical and successful—there is nothing of greater value in the feed room than a good, easy-working, always-ready bone cutter.

Cut green bone, freshly cut of course, is as much part of the regular ration as corn. Consequently the necessity of the machine.

Many may claim to be good but there is quite a difference in construction and ease of operation and this is most apparent when one is familiar with the Crown Bone Cutter, made by Wilson Bros., Easton, Pa.

This handy machine works quickly and simply, turning out the bone-shavings in just the shape for quick digestion by the fowls.

One of their catalogues, sent on request, will explain the principle and give you valuable information on egg laying. Write for it.

AN ESTABLISHED REPUTATION.

It is a big satisfaction to find a dealer in any line of business who sells by mail and who can be relied on in every instance to do exactly the fair and honest thing. When a dealer and a customer are separated by the length of several states, misunderstandings sometimes

arise. This is as true in the seed business as in any other. The editor knows of a dealer at Rockford, Ill., H. W. Buckbee is his name, who has a reputation for reliability the country over and who in the thirty-eight years that he has been in the seed business has succeeded in building up a trade that is equaled by few, if any, seedsmen in the country. This big business is the result of sending out only the best quality seeds at right prices. Mr. Buckbee's 1909 catalogue has just come to the editor's desk. It is one of the most attractive we have seen. If you are going to buy seeds this season, write to Mr. Buckbee for one of these catalogues as it will pay you to give him a trial order, and mention American Poultry Journal.

UNQUALIFIED ENDORSEMENT.

Readers who want to improve their present flocks or wish to start in with a very high class breed, should not fail to take advantage of the offer of W. F. Chamberlain, Kirkwood, Mo., to get a start with his famous strains. This advertiser is very widely known as the originator of "Dry Chick Feed" and "Chamberlain's Perfect Chick Feed" is now the standard everywhere. The following letter, from a high authority, is remarkably convincing:

Waterville, N. Y.
W. F. Chamberlain, Kirkwood, Mo.:
Dear Sir—We are having excellent reports from several students using "Chamberlain's Perfect Chick Feed," and do not hesitate to recommend it.
Very truly yours,
Columbia School of Poultry Culture,
A. A. Bingham, Director.

J. F. VanAlstyne, Niverville, N. Y., breeder of Columbian and Silver Wyandottes, made several entries at the late Madison Square Garden Show, but owing to the serious illness of his little girl, was unable to either send his birds or attend the show, which accounts for the coops bearing his numbers in the catalogue, being empty. We are pleased to report, however, that his little girl is rapidly recovering from her late illness and Mr. VanAlstyne will no doubt be seen in the thick of the fight at the next Madison Square Garden Show.

Very few people realize the extra quality of White Wyandottes bred by Geo. Barkdoll, West Unity, Ohio. The writer has personally inspected his birds and knows what he is offering his customers; that fine Wyandotte shape, those quills as white as snow, extra good combs and eyes. Look up his ad in this issue and write him your wants. He will treat you honestly and fairly. Mention American Poultry Journal.

H. C. Sheppard's famous Anconas, of Berea, Ohio, were at the front again in the great Madison Square Garden show. Last year they won all the first and second prizes in the largest Ancona class in the history of the big show. This year they made another splendid record by

winning two firsts, two seconds and two thirds on six entries.

H. N. Hanchett, of Jackson, Mich., won at Jackson Poultry Association, Jackson, December 14-19, 1908, as follows: 1st cock; 1st, 3rd, 4th hens; 1st, 2nd, 3rd, 4th cockerels; 1st, 2nd, 3rd, 4th pullets; 1st, 2nd pens; American Buff Cochins Club Specials for best male and best female; silver cup for best display Cochins, any variety. O. L. McCord, judge. Thirty-five in Buff Cochins class.

Peter S. Hurt, of Thorntown, Ind., the original quality breeder of the famous and now popular Single Comb Buff Leghorns and the man who covers his field air-tight, bumped over into fast company at Boston this season and on four entries came out with flying colors, he having captured 1st cock, 1st cockerel, 1st pullet and 2nd hen and several specials.

Parties looking for something good in Columbian and White Wyandottes and Buff Cochins Bantams, should look up the ad of Chas. H. Whitney in this issue and waste no time but send immediately to him for description of birds. He has the goods to please his customers and guarantees all a square deal or money refunded. Mention American Poultry Journal.

We are just in receipt of neatly gotten up circular issued by the Buff Leghorn specialist, Peter S. Hurt, of Thorntown, Ind., for the benefit of prospective customers for "Quality Buff." It has four pages of forceful matter pertaining to his methods, guarantee and merits of his birds and will be sent free to you if you mention American Poultry Journal. Ask for Circular "S. T."

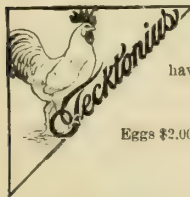

Harry B. Prescott, Dairy Village, N. H., reports the following winnings at the late Boston Show on Buff Orpingtons: 5th cock; 3rd hen; 5th cockerel; 1st pullet; 2nd pen. Black Orpingtons, 2nd cock; 3rd hen; 1st pen. White Orpingtons, 1st pen. Diamond Jubilee Orpingtons, 3rd and 4th hen; 1st cockerel; 1st and 2nd pullets. Richard Oke, judge.

In this issue of the American Poultry Journal Mr. Phillip Hanlon, Jr., of Watertown, N. Y., starts a yearly ad calling attention to his Buff Leghorns. Mr. Hanlon states that his birds are the pure Lamon strain, which is certainly recommended enough. Write them for prices and mention the American Poultry Journal.

J. S. Wason, Grand Rapids, Mich., breeder of Silver Pencilled Wyandottes, won at the late Chicago Show: 1st cock; 1st cockerel; 1st pullet; 2nd hen.

Carver & Avery, Columbia City, Ind., won at the late Chicago Show on Silver Pencilled Wyandottes: 1st hen; 2nd cock; 2nd cockerel; 2nd pullet.

Buy fence at wholesale—15 cents a rod up. Write Kitzelman Bros., Muncie, Ind., today for free catalogue. See their ad in this issue.

SINGLE COMB BUFF LEGHORNS

have proved, by long and thorough test, the healthiest, hardiest, lightest feeders, choicest eating and biggest winter layers. Breeders the country over are coming to recognize the Tecktonius Buffs as

THE BEST GENERAL PURPOSE FOWL ON EARTH

Eggs \$2.00, \$3.00 and \$5.00 per setting. New mating list nearly ready. Handsome illustrated catalogue in colors sent for 4 cents in stamps. It tells how to breed and feed Buff Leghorns successfully and is invaluable to anyone interested in poultry raising. Send for it today.

Remember all stock purchased may be returned at our expense and your money cheerfully refunded if found not as represented. Remember you should purchase where you get the best quality and guarantee for your money. Catalog of winnings, etc. Write just what you want.

BIRD BROS.

Box C, MEYERSDALE, PENNA.

Blanchard's White Leghorns

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain, and while the production of large, pure white, fancy market eggs has been the main object, standard qualities have not been neglected. They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled as foundation stock or for introducing new blood. Stock for sale. Eggs for hatching from my regular matings at \$2 per 15, \$3.75 per 30, \$5 per 45, \$10 per 100; from exhibition matings, \$3 per 15, \$5 per 30. Illustrated circular free.

WINNERS AT MADISON SQUARE GARDEN, N. Y., 1903-1904-1905-1906-1907

A. M. SHAW

SUCCESSOR TO H. J. BLANCHARD

Box 997, GROTON, N. Y.

POULTRY FANCIERS' YARDS.

Mr. Frank Sissons at Worksop, Notts., England.

W. Bush, in Poultry, London, England; Head Poultryman to the Duke of Portland, K. G.

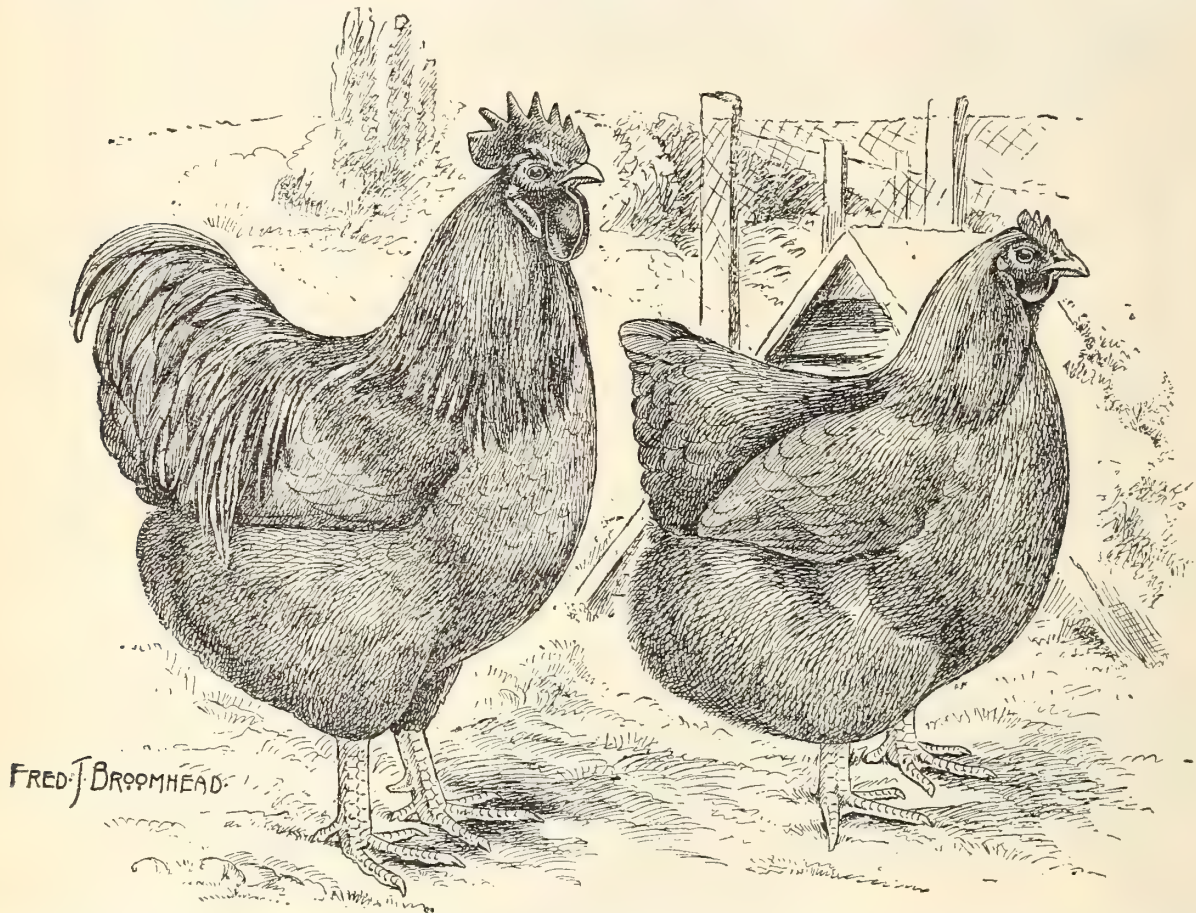

Last spring I had the pleasure of inspecting Mr. Frank Sissons' flock of Buff Orpingtons at his Blyth Road Poultry Farm, Worksop, Notts. I was so interested and so astonished at the quality of his stock on that occasion that I recently gladly availed myself of an invitation to look over this year's birds, knowing how successful the stock was at the shows at which it was exhibited last year, despite the fact that Mr. Sissons, being a busy man (in other spheres altogether different from that of poultry rearing), has only been able to find time to exhibit at comparatively few events. And this is to be regretted, since a better lot of Buff Orpingtons it has never been my

cobby 1907 hens, and mostly of perfect color, were running, many of them well emerged from the moult. Several of them have taken prizes at the various shows, and they would take a deal of beating as stock birds, both in size and quality, weighing, as they do, an average of about 10 pounds each. In No. 3 pen were sixteen pullets of great size and bone, and excellent type, such as would be difficult to pass any Buff Orpington fancier's eye. In another shaded house were about a dozen equally beautiful pullets, while in a well-shaded, but well-ventilated shed were a dozen more, all of similar type to those I saw in pen 3. In pen 1, a large, well-ventilated shed, covered in all round the sides, were twenty pullets further advanced, and nearly on the point of laying. They were a nice level lot, weighing on an average about 8 pounds and something superior to anything I have seen of this year's breeding.

I then inspected eight specially built show pens. In the first were two hens in moult, which between them won many prizes last year, including 1st and special

comparatively a chicken, just over 11½ pounds. He has a perfect head and a nice hackle, is broad shouldered, and set on fine legs, nearly round, and of ivory-like texture. Another pen was occupied by pullets which should, I think, turn out even better than the three to which I have just referred. Although they are several weeks younger, they are of a nice medium color. One I noticed had an especially clean hackle, and two of them have very nice heads, and are very cobby. There was a nice black cockerel in No. 8 cockerel pen. This bird was in moult, but far enough advanced to show what he is likely to be shortly, although I cannot say that I cared much for his type; he is a massive bird, whose excellent sheen, short legs, and fluffy appearance particularly took my eye. In another covered shed, being carefully shaded, were seven pullets, some of which struck me as being ideal buffs, and which should do well at the later shows.

Passing to another paddock, I found some rare cockerels of great bone, short on leg, and, though just coming out of

BUFF ORPINGTONS.

Winners of (between them): First, second and special, Newark; first, Challenge Cup, second and special, Retford; first and special, Northallerton; second, Bentham; second, Crowe; first, Ashover; first, Harthill; second, Kegworth; h. c., Crystal Palace; v. h. c., Dairy (in an exceedingly strong class of seventy-five), and many other prizes. Bred and exhibited by Frank Sissons, Worksop, Notts, England.

lot to see, and I may say that within the last few weeks I have inspected some of the principal breeders' establishments in the country. Of the many prizes this Worksop poultry establishment has to its credit, with a single exception, not one prize has been awarded to any bird which has not been bred and reared on his farm. A few days before my arrival Mr. Sissons had despatched a pen of Buff Orpingtons to South Africa, and quite recently he sent a pen to Canada, while he was preparing to ship a team to the United States.

First of all I inspected the old stock, most of which, of course, are now in moult, which renders it somewhat difficult to judge of their qualities. In a small pen there were five 1907 hens, with a Holmes' cockerel—good, useful, deep-set birds, and the cockerel of nice level color. They have all great bone, and are of true type—clearly the result of careful selection. In No. 4 pen, nineteen really

Northallerton; 1st, special and cup Retford; 2nd Bentham; 2nd and 3rd Crewe; 1st and 2nd Ashover; 1st and 2nd Harthill; 1st, 2nd, special Newark; vhc Dairy; 2nd Kegworth; 2nd Ellel, hc. c., Crystal Palace, and many other prizes. In No. 3 show pen there were three select buff pullets, the largest I have seen this season, of sound color, free from lacing and mealiness, and wonderfully cobby and low-set. One of them only last week took second prize for its owner at March, the only time exhibited; while another got reserve. When developed they will require exceptionally good birds to beat them.

In the next three pens were cockerels being shaded and prepared for show. One particularly took my fancy. He is one of the best cockerels I have seen this season, of capital shape, low on leg, of the deeper-colored type, and for the next season should breed some really good-colored pullets. This bird weighs now, although

the moult, of level deep buff, many of them with every promise of making their mark when exhibited. Running in a loose yard from a specially-constructed show pen (which had sliding shutters), were ten good-sized, shapely pullets of true type, on the production of which the owner has spent so much study, labor and money. In another show-house were a dozen nice pullets, good enough for exhibition at the big shows. A portion of this south paddock is wired off, and on it there were about thirty 1907 hens, some of which are for disposal. In a cockerel pen was one of last year's breeding cockerels, of good medium color, big-boned, clear white legs; and he struck me as the sire of many of the best pullets I saw.

Running wild over a well-covered grass field, and on a nice sunny slope towards the south, were about a hundred pullets, and those I picked up at random were almost perfectly sound in flights, under-

color, and tail; and varied in age from January to April hatching. Most of them, Mr. Sissons told me, were being disposed of. In another shed were being shaded a dozen pullets of rare type and sound color, set on nice round ivory legs, and low down; most of them will be difficult to beat at the coming shows in keen competition. Crossing the road I came to another large yard containing about forty cockerels. A special feature of these was their great size and soundness of color, and they should be capable of producing some of the best Buff Orpingtons in the country. Most of them have obtained their adult plumage, and are looking quite vigorous. In another paddock of about eight acres (though they have an unlimited run over the adjoining fields) were about ninety cockerels rather younger than those just described, but many of them showed great promise. They were chiefly bred from the No. 1 pen I had the pleasure of seeing last year.

In one corner of the farm is a small place which Mr. Sissons calls the "hospital"; but instead of being used as a "hospital" (which seems needless at the Blyth Road Poultry Farm), it is occupied by a number of young cockerels. They were all from No. 1 pen, which Mr. Sissons recently sold, together with a number of chickens from that pen, to one of the biggest breeders and exhibitors in the United Kingdom. The sire of these birds was by a pullet-breeding cockerel Mr. Sissons got from Mr. F. Bloomer, who considered it one of the finest pullet-breeding birds he had ever seen; and the success of its progeny proves the accuracy of Mr. Bloomer's judgment. Altogether I saw about 250 Buff Orpington pullets, and 150 cockerels—a flock which, in my opinion, would take a deal of beating in any yard in England. I also noticed that Mr. Sissons had a few turkeys and Muscovy ducks, though he attaches no importance to anything but Buff Orpingtons!

The Blyth Road Poultry Farm is situated on a high dry sandy subsoil, with a nice southern slope, the site being an ideal one for a poultry farm. It is fitted with the most up-to-date artificial appliances, mostly designed by the owner; but the chief feature is that Nature is specially studied. For example, neither hay nor straw is to be seen, the abundant red sand being everywhere used. The owner insists that the poultryman shall exercise the greatest care, and special attention is paid against overcrowding; keeping the house scrupulously clean; well provided with fresh water, green bone, and ample ventilation, which undoubtedly accounts for the extraordinary bone which is a feature of this flock of Buff Orpingtons. The poultry houses are built on the most hygienic principles. The mess-house is a commodious building, with hot and cold water laid on, oven and boiler, and is well fitted in every way, electric light being the illuminant. In the food house I noticed maize, oats, wheat, barley, bean-meal, pea meal, and biscuit meal; all grain must be of the best quality procurable.

Though, owing to pressure of business (poultry breeding being only a hobby), not much exhibiting has been done this year, those birds shown thus far have done well. Only on Wednesday of last week one buff pullet, bred and exhibited by her owner, took first at Peterborough Show, and another won fourth prize; and 2nd March; 1st Harthill; 1st Epworth, are among the prizes gained during the past few weeks. Well may Mr. P. Proud have said of these birds after visiting these yards two years ago: "In all my travels I have never come across a finer flock of Buff Orpingtons; such shape, size, and bone I had rarely seen." In connection with my suggestion that he should add other breeds, Mr. Sissons replied: "No! I will stick to my buffs—and buffs only; one can do so much better by devoting one's time and study to one breed, rather than a dozen."

Last spring I selected two buff cocks for His Grace the Duke of Portland's yards at Welbeck. The best bird has bred about eighty pullets and thirty cockerels, nearly all of which are of sound color, good type, immense bone, and of great promise. Only this week I have been selecting my birds for mating, many of the pullets weighing up to 10 pounds, and the cockerels to 12 pounds, and are, I consider, a very creditable lot, and may be inspected any time at Welbeck by appointment.

The brief outline I have given of the Workshop Buff Orpingtons, and the houses and pens, will convey to the reader the secret of Mr. Sissons' success in building up such a grand strain; and he is now being rewarded by his many successes at

the shows, and his numerous orders from home and abroad, in such a short time. Anyone desirous of inspecting this flock may do so by appointment. The yards are situated about five minutes' walk from Workshop (Great Central) Railway Station, and visitors will receive there a cordial welcome.

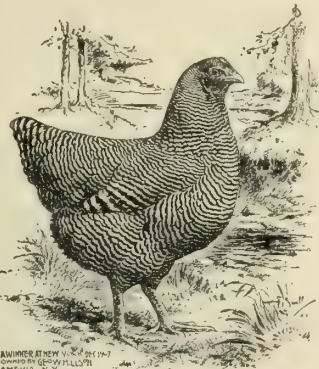

Frank J. Dick, Oberlin, Ohio, breeder of

Barred Plymouth Rocks, reports the following winnings at the Oberlin Show, December 16 to 19, 1908. 1st pullet; 1st, 3rd and 4th hen; 2nd cockerel; 1st pen; 3rd cock.

COLUMBIAN WYANDOTTES. Fine birds, at reasonable prices. Satisfaction guaranteed. It will pay you to write. R. M. Wheeler, Cuba, N. Y. 12-3

"BARTLETTS" ARE COMING!

EQUALLED BY FEW ... EXCELLED BY NONE

AWARDED NEW YORK 1907
CHAMPION BUFF ORPINGTON
AMERICA, N. Y.

FIRST ATTEMPT

Winner at New York 1907-8

At Madison Square Garden

New York, 1907-8

G. W. HILLSON'S Barred Plymouth Rocks WON FOUR SPECIAL PRIZES on PULLET AND EXHIBITION YARD. ALSO WON PULLET again at NEW YORK 1908-9.

"PROOF" that my FEMALE LINE is the equal of the BEST in the world. 100 selected pullet bred cockerels that will enrich any LINE in COLOR and BARRING at right prices. Eggs from best mating. One setting \$5.00; two settings \$9.00; three settings \$12.00; four settings \$15.00. Prompt shipment. Circular free.

Common-Sense Poultry Doctor

Every agricultural college and experiment station, every recognized expert authority, unhesitatingly admits, that this is the greatest book on poultry diseases and their treatment that was ever published. It is completely supplanting the old works and is rapidly becoming adopted as a text book by every institution where poultry keeping is taught.

One Professor Emphatically Remarks:

"At last we have a book on Poultry Diseases and their treatment which not only covers the subject completely in a practical common sense manner, but also provides for the correct identification of diseases by the non-professional which I consider a vitally essential feature." Its 16 chapters, covering 176 pages, embrace the very best tested and proven methods of treating sick and injured fowls. Its author is John H. Robinson, editor of the great eastern monthly, Farm Poultry. Mr. Robinson has drawn from every valuable source of reliable information, which, coupled with his own wide and varied experience, has resulted in what pleased purchasers enthusiastically proclaim as "the greatest ever." The price is 50 cents, all postage prepaid, and it is sold under an absolute guarantee of money back promptly if dissatisfied. This book is something every poultry keeper absolutely needs and it will save him many dollars in breeding and exhibition stock in the course of a year. Send post office or express money order, cash or stamps.

A. G. CLARK, WILLOUGHBY, O.

AN INCUBATOR AND BROODER FIXTURE SUPPLY HOUSE.

Conveniences and Safety Appliances
for All Makes of Machines.

We show on this page an engraving
made from a photograph of the factory
of the Oakes Manufacturing Company, at
Bloomington, Ind.

This in many respects is a model fac-
tory and one in which any person who
appreciates seeing fine machinery and an
up-to-date factory equipment will find
much of interest.

The building is made of rock faced
building tile, and has about seven thou-
sand feet of floor space, all devoted to the
manufacture of incubator and brooder
supplies. It is heated by hot water from

Oakes Company. Among the special ma-
chines are several used in making and
putting together the parts of the Oakes
corrugated wafer thermostats and the
Oakes hydro-safety lamps. A consider-
able part of the wall space in the ma-
chine room is covered with shelving filled
with dies of endless variety—all carefully
numbered and catalogued so that any one
of them can be found without loss of
time.

The equipment for punching and stamp-
ing consists of about twenty foot presses
of various sizes and five power presses,
the largest of which handles stamping
dies up to eighteen inches in diameter.
Numerous drills of various sizes, three
lathes, a miller, and a screw machine are
used on the brass work for regulator
parts, castings, etc.

Among the interesting special machines

a central heating station, and equipped
with electric light and electric power.

The front part of the first floor is occu-
pied by the offices—one on either side of
the hall. Back of the offices is the "cut-
ting room," with wide doors for receiving
material—mainly sheet brass, copper, tin
and galvanized iron. This sheet metal is
cut up in the cutting room on square
shears or rotary shears, and some of it
passes through slitting shears and comes
out in long narrow strips which go to the
presses in the machine room and are cut
into discs or blanks of other shapes with
dies. In one corner of the cutting room
is a freight elevator to facilitate moving
the material from one floor to another.

The rear half of the first floor is the
machine room, and here are to be seen
many special machines of which there are
no duplicates in existence, as they were
designed and made especially for produc-
ing some of the articles made by the

is an automatic gang drill which, after
the work is placed in it, will drill any
number of holes, not exceeding thirty-
four, and locate each one accurately with-
out being touched by the operator. Also
a riveting machine which strikes about
750 blows per minute with a rotating
hammer. The special feature of this
riveter is that the length of the stroke
and consequently the force of the blows
is regulated by the pressure on the foot
lever without any change of speed. Both
of these machines were designed by the
master mechanic of the Oakes Company
especially for their work.

The basement has tow rooms, one used
for storage, and in the other one part of
the sheet metal work is carried on. Here
are all sorts of tinner's hand and foot
power tools for folding, forming, burring,
beading, seaming, etc., and this class of
work is done in the basement while the
tin shop proper is on the second floor.

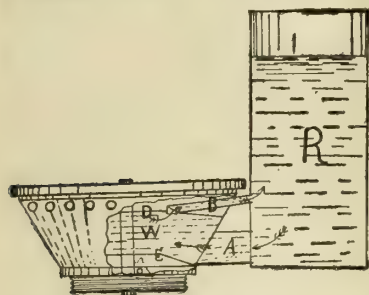

One side of the tin shop is lined with soldering furnaces, and on the other side is a row of foot power machines for punching, cornering, notching, eyeletting, etc. Through the center of the room is a wide heavy bench carrying stakes, mandrels, tube formers and folders, and one end of the room is occupied by an apparatus for testing tanks and oil founts with compressed air.

At the rear end of the second floor is the packing room, forty feet square, lined with bins and shelves filled with the finished articles ready for shipment—lamps, burners, oil founts, chimneys, thermostats, regulator parts, tanks, heaters, etc., all in shape so the required article for each order can be conveniently selected.

A simple and effective system of handling the orders is used. After the mail is gone over at the office the orders are handed to the shipping clerk, who makes out a separate shipping order for each one with a copying pencil, on numbered blanks printed for the purpose with copying ink. These shipping orders go to the packing room and are taken up in rotation, and as each article is selected it is checked off on the proper column of the shipping order. When all the articles for one shipment have been selected they are turned over to the packer along with the shipping order, and each article is again checked up as it is packed. When the package is made up it is numbered to correspond with the order. The shipping order is then returned to the office, and the tags are made out and numbered to correspond with the order, so there can be no confusion in putting them on the packages. The shipping order is then made into an invoice by inserting the prices of cash received, etc., and two copies are made of it, one of which is mailed to the customer. By carefully following this system mistakes in shipping are reduced to a minimum.

The third floor of the building is divided into two rooms, one is a stock room for finishing parts, and the other is fitted up for filling, sealing and testing wafer thermostats. The equipment of this room includes an automatic machine which measures out the exact amount of liquid required and forces it into the wafer; also special apparatus for sealing and testing them. Each wafer is tested in temperatures from 100 degrees to 130 degrees and guaranteed to give good results at all points between those extremes. The wafer room is not open to visitors, as the company considers a secret process safer than a patented one.

The business now conducted by the Oakes Manufacturing Company was established by Mr. L. R. Oakes in 1892.

Only one article was then manufactured—the Oakes hydro-safety lamp, originally patented in 1889. This lamp has twice been improved and patented since that date, and is still one of the leading articles made by the Oakes Company. The safety feature of this lamp is in the burner, and in fact there can be no safety lamp without a safety burner, as the burner is the source of the heat, and consequently the source of the danger.

The safety feature of this burner is a water jacket connected with a reservoir by two tubes, and the water jacket is applied directly to the wick tube so that the heat is controlled at the point where it is generated, and it is impossible for the burner to become overheated.

The construction of the hydro-safety burner is shown in the accompanying diagram. The water jacket W is formed by the sides of the burner and the top disk D and the bottom disk E, and is connected with the reservoir R by the tubes A and B. The water enters the water jacket through the lower tube A, and when warmed by the wick tube rises and returns to the reservoir through the

tube B, thus keeping up a constant circulation and preventing the wick tube from becoming heated above the temperature of the water in the reservoir, which in turn is cooled by evaporation, thus effectually preventing the burner from becoming overheated, and consequently removing all danger of explosion or fire.

The hydro-safety lamp has been on the market sixteen years and the fact that its sales have constantly increased through all that time is the best evidence of its practical success. It might not be out of place in this connection to warn prospective purchasers against imitations of the Oakes hydro-safety lamps, which have been put out by some unscrupulous manufacturers and dealers. The genuine hydro-safety lamp is made by the Oakes Manufacturing Company only, and the

important features of both burner and oil fount are covered by three broad patents.

A complete line of incubator and brooder supplies, fixtures and repairs—all the metal parts for making new incubators and brooders, or repairing old ones—is manufactured by the Oakes Company.

This season they are putting out a new article in the way of a fireproof brooder heater, with metal lamp box attached; and also a new style of incubator heater for machines of the diffusive hot air system.

Their catalogue for 1909 was issued January 15. Send them your address now, with a request for catalogue No. 17, and it will come to you by return mail. Address the Oakes Manufacturing Company, Bloomington, Ind.

EGGS for HATCHING

From our Great Laying Strains of BARED PLYMOUTH ROCKS, WHITE WYANDOTTES, WHITE PLYMOUTH ROCKS, R. C. R. I. REDS. Hardy, vigorous, northern grown stock that is as healthy, happy and busy with the mercury at 30 below zero as when catching June bugs in the orchard. All B. P. Rock pens headed by Maine Experiment Station cockerels. Get some of the blood of this famous laying strain and note results. Securely packed, \$2.00 per 15, \$6.00 per 100.

Special Prices for Charcoal

Do you use Charcoal in lots of 500 pounds or more? If so, we can save you money by buying it of us. To prove it, let us quote you prices on our Indian Brand Charcoal. The purest and finest Charcoal made. We guarantee it to be so, or your money back, 100 pound lots if desired. Write us your needs today.

THOMAS BROTHERS COMPANY - 1227 Beach Street - PHILADELPHIA

TWO HATCHES FREE

YOU can buy this machine from your home town dealer, on our special Sixty days' free trial, and on our absolutely binding Five Years' Guarantee. This is the most liberal offer ever made on a strictly high-grade machine. Just remember

The Gem Incubator

is not an experiment. It has been used by thousands for years. It is of high-grade material, double walled, heavy metal parts, and substantially built in every part and detail. It owns several valuable features found in no other incubator—particularly the Removable Chick Tray and Nursery.

Then, the Gem is most easily operated and the most practical for either expert operator or beginner. The improved system of ventilation in the Gem requires no artificial moisture and the Improved Gem Regulator is the most advanced

and absolutely reliable device invented for controlling the temperature. With all of these conveniences, it requires but five to ten minutes of attention in 24 hours.

Here is some real evidence in the words of users:

Dear Sirs: The Gem is O.K. 107 chicks from 108 fertile eggs. Mrs. H. D. Peabody.

Chicks were all strong and healthy, and I raised all of them. W. H. Hesler says that 90 per cent of eggs were hatched. Every chick a healthy one.

If your home dealer does not have the Gem in stock we will send it to you direct from the factory on 60 days' free trial.

GEM INCUBATOR COMPANY, Box B, Trotwood, Ohio

Lapham's Buff Ply. Rocks

The Gold Medal Strain

WIN EVERY FIRST at Michigan State Fair Sept., 1908: 1, 2 cocks; 1, 3 hens; 1, 2, 3 cockerels; 1, 2, 3 pullets; 1, 2 pens.

At Dearborn, Mich., Dec. 14, 1908: 1, 2, 4 cocks; 1, 2 cockerels; 1, 2, 3, 4 hens; 1, 2, 3, 4 pullets; 1, 2 pens, in strong competition.

They are winners the world over. Why? Because they are bred from THE GREATEST LINE IN THE WORLD. I have over 1,000 Show Birds and breeders yet to offer, and remember, I GUARANTEE TO PLEASE or money refunded. I now have MY 1909 EGG CIRCULAR ready for mailing. Write today. It is the finest ever gotten out. Send for copy, FREE. I can please you, as I have hundreds of others.

Dearborn Poultry Yards

S. D. LAPHAM, Proprietor : Box A : Dearborn, Michigan

This Great Work Free!

The Poultry Annual just published is the finest, best and most up-to-date work on poultry ever issued. Its big pages tell all about the keeping of poultry and where to buy the different breeds, incubators, brooders, bone mills, feeds, roofing and all other supplies. It is invaluable.

For the Little or Big Poultry Keeper

The merits of various breeds are fully described; the most approved methods of feeding to secure winter eggs and of raising young chicks; the handling of breeding fowls, ducks, geese and turkeys; managing incubators and brooders; in fact, the whole art and science of poultry keeping fully explained by scientists and practical poultrymen and women.

Some Special Features

Skim Milk for Poultry, by Prof. Horace Atwood, of the West Virginia Experiment Station.

The Best Side of Poultry Keeping, by George S. Barnes, of Michigan, member executive committee American Poultry Association.

Poultry Keeping on the Pacific Coast, by Harry H. Collier, of Washington.

Modern Method of Housing Poultry, by Prof. James Dryden, of Oregon Agricultural College.

A New Variety of Plymouth Rocks, the Golden Barred, described by William F. Forttall, of Pennsylvania.

A Coöperative Poultry Club, by Dr. W. E. Franke, of Illinois.

Feeding Poultry for Market, by Prof. W. R. Graham, of the Ontario Agricultural College.

Mrs. Farmer and Her Hen, by M. M. (Trusty) Johnson, of Nebraska.

How a Woman Paid off the Mortgage with Hens, by Mrs. G. C. Johnson, of Iowa.

The Duck's Place on the Farm, by Judge Charles McClave, of Ohio.

A Woman's Method with Poultry, by Mrs. George E. Monroe, of New York.

What the Colleges and Experiment Stations are Doing in Behalf of Poultry Culture, by Prof. James E. Rice, of the New York College of Agriculture.

The Partridge Wyandotte, by E. O. Thiem, of Iowa.

Fancy Poultry for Farmers, by Floyd Q. White, of New York.

Preventing Deadly Blackhead of Turkeys, by George Enty, of Pennsylvania.

How Ducks Pay for a Farm, by Russell L. Hutchinson, of Massachusetts.

How a Nutmeg Poultryman Kept 3,000 Hens, by Poultry Editor.

HOW TO GET IT

Send us 25 cents in *silver or stamps* and we will send you this great work on poultry by mail, postpaid. We will further include to all whose orders reach us within ten days a subscription to our semi-monthly FARM AND HOME until October, 1909 (16 numbers in all).

FARM AND HOME, as its name implies, is indispensable to all interested in rural, suburban or family life, and is the most useful paper of its kind. It reaches over two million readers, a telling testimonial of its practical value and intrinsic worth.

Order now, as this offer will not appear again.

Address, mentioning this paper,

FARM & HOME, Chicago, Ill.

THE TOLEDO POULTRY SHOW.

By C. W. Zimmer.

To say that I was surprised when arriving at the Toledo show is putting it very mildly. The first thing that one hears about is the Randolph Baby Incubator. They are giving away this Baby Incubator to the hospital that receives the largest number of votes. It is operated by the Randolph electric damper and physicians of the city say that it is impossible for the temperature to change more than a fiftieth part of a degree. The same regulator is used by the Randolph Incubator Company on their line of machines for hatching eggs. In fact it is one of the wonders of the age. The electric damper is operated by the thermometer in the egg tray and in this way the temperature is automatically regulated so the eggs can never become overheated. The electric damper is connected to the heater on the outside of the machine, which is opened and closed as quick as a telegraph instrument and is not affected by the atmospheric conditions of the outside. The Randolph patent slatted egg tray is used in their machine. The egg tray is constructed of slats placed one and one-eighth inches apart, slanting downward from the end to the center. To turn the eggs all the operator has to do is to remove one egg from the lower end of each row in the center and place it at the opposite end of the row. This allows the rest of the eggs to turn half over. When the chicks hatch they drop down between the slats to the nursery below without disturbing any other egg while hatching. This machine is also equipped with a moisture appliance, which is accomplished by the absorption of so many ounces of water in proportion to the number of cubic inches of air space in the egg chamber and by evaporating it uniformly to maintain a uniform saturation of the air in the egg chamber, making the humidity the same as under the hen. This is accomplished without any hygrometer. The ventilation is so constructed that it is taking place at all times without creating a draught, leaving the machine always in a sanitary condition. The Randolph Incubator Company of Toledo, Ohio, can prove this to your satisfaction if you will write them for circulars of their line of incubators.

Geo. Barkdoll, West Unity, Ohio, reports he won on his White Wyandottes at Toledo, 1909, 1st, 5th cock; 1st pullet; special for best chicken and special for best pullet, making five premiums on five entries. At the show at Eaton, Ohio, he won 1st, 2nd, 3rd cock; 1st, 2nd, 3rd hen; 2nd, 3rd pullet; 2nd, 3rd cockerel; special for ten best birds in the show and special for highest scoring pen in the show. These winnings speak well for Mr. Barkdoll's Wyandottes and his winners are in his breeding yards. You will find his ad in the American Poultry Journal.

Homer Slagle, Poland, Ohio, Route 3, breeds some fine Reds in both combs. We handled some females showing extra strong under color and at the Youngstown show in a hot class of Reds he won two silver cups, diploma for best bird in the show and all firsts in Single Combs and all firsts in Rose Combs, except first cock. These and his other winnings tell the quality to be found in Mr. Slagle's flock of Reds. We suggest that our readers send for his egg circular. See his ad in this issue.

Wm. Tyler, R. R. 2, Bowling Green, O., breeder of Buff Rocks, made a clean sweep at the late Toledo show by winning five first prizes, two seconds, one third, one fourth and one fifth. Also special for best display in American class; the District Buff Rock Club cup, special ribbon for best shape male, special ribbon for best shape female, special ribbon for best colored female. Mr. Tyler has won the Buff Rock State Cup for the last two years. He has six pens mated for eggs. You will find his ad in the American Poultry Journal.

While in Akron we examined the S. C. Reds owned by Wm. A. Oller, 588 W. Exchange St., and found them to be good specimens in both color and shape. His flock is above the average and we can further assure our readers he will do just as he agrees. We refer our readers to his ad in the American Poultry Journal.

The National S. C. Red Club had an enthusiastic meeting at which eighty new members were added to the club. The club is in a growing condition and doing good work in boosting the Single Comb R. I. Reds. Judge C. W. Zimmer, Ft. Wayne, Ind., was elected president and Joe Valiere, Cedar Rapids, Ia., secretary.

THE EVOLUTION OF POULTRY KEEPING.

(Written by Myron H. Bent, Antwerp, N. Y.)

The pendulum swings to and fro in poultry-keeping as well as in the history of nations. Nations rise and fall, come and go, flourish and die, but the great world goes on, working out its destiny. New breeds of fowls suddenly appear on the horizon, travel a meteoric course and disappear, sometimes leaving in their wake blasted hopes and ambitions. New "systems" and "methods" of poultry-keeping also "make the welkin ring," and they, too, comet-like, are gone as quickly as they come. In their wake, however, are sometimes gathered a few fragments of truth. And so, too, the great poultry industry, greater than the annual wheat harvest, moves on. The pendulum swings to and fro, from one extreme to the other, and somewhere between the two is always found that priceless jewel, the truth. Thus, likewise, the only branch of agriculture which is truly national works out its destiny, has its evolution.

Poultry-keeping is truly the only department of agriculture or animal husbandry that is national in its scope, that is found in every clime, in every latitude, every longitude of Uncle Sam's vast and wondrous domain. Wheat growing is confined to a handful of trans-Mississippi states; cotton is limited to southern climes; dairying is practiced most extensively only in the states of the east and middle west; cattle raising prospers only on the plains and ranches of the great west; tobacco growing and fruit raising largely flourish in the tropical climates of the South and the Pacific slope—but the great American hen flourishes everywhere. The joyous music of her cackle is heard on the rock-bound coast of Maine and in the land of the Golden Gate; in the rugged regions of Lake Superior and in the balmy atmosphere of the Gulf states. Wherever man dwells, the hen abides. Agriculture is said to be the basis of all civilization, but it would be more aptly put if it were stated that the hen was the basis of all civilization, for it would be difficult for man to exist without her. She is everywhere omnipresent, and those who doubt or scoff at her prominence had better sit up and take notice. She will demand and receive even more and more prominence, for the poultry industry is making greater strides than all others. Poultry products are in greater demand than ever before, prices rule uniformly high and stable. The hen is here to stay, and we trust to lay, whether on the city lot, in the farm yard, the fanciers' home or the great egg farms of the commercial poultrymen, where they swarm in thousands.

But it is not the purpose of this article to measure the length, breadth and thickness of the poultry industry, to dwell upon its magnitude, but to discuss some of the old and new "methods" and "systems" of poultry-keeping, some that were in vogue ten and twenty years ago and some of those but recently heralded by the wise men of the fraternity.

A quarter of a century ago the hen received but scant notice. It is true that a few fanciers had begun to make importations in an effort to awaken interest and improve the breeds, to whom much credit is due, but in the main the hen was a product of the barn-yard, and

a by-product at that; in fact, extremely "by." There was little method or system in the breeding and care of poultry. Any old place was good enough to keep fowls and any old thing handy was good enough to feed them, indeed, if fed at all. By many, we regret to say, this method is still followed, but their numbers are fast diminishing. Nevertheless, through this early strenuous period the hen has emerged triumphant, and prices are paid for choice specimens that fairly stagger the layman, prices that relatively far exceed all other members of the animal kingdom. One thousand dollars for a Rose Comb Black Minorca cockerel amply verifies this statement.

After some interest in poultry culture had been kindled, methods of propagation and care were promulgated, systems were adopted. One of the first requisites was warm buildings; in fact, they were vigorously advocated almost until yesterday. The poultry journals and the poultry columns of the agricultural press fairly teemed with this doctrine. It was the one indispensable thing, sine qua non, of all poultry keeping—walls papered, double papered, clap-boarded or coped, ceiled inside and outside; walls filled with straw, earth and sawdust; double windows and doors, warm roofs and floors, and in fact some

buildings were almost air tight. The writer's own building was built a good deal on this plan, but has a good system of ventilation. Great expense was practiced in all building operations, artificial heating apparatus being frequently used.

This was one extreme. These extremely warm buildings were almost always damp, unless artificially heated, and dampness is the bete noire of all poultrymen. The heated buildings made the fowls tender and was enervating. Thousands upon thousands of dollars were thus worse than wasted. These extremely warm buildings have had their day in court.

But presto! behold, what have we now? Open or curtain-front buildings and scratching sheds, where water would freeze solid in ten minutes in the severe climate of northern New York, where we had sixty days of zero weather or worse, mostly worse, in a recent winter. A good professor who dwells among the hills of Connecticut states that some of his fowls roosted in trees all winter and ate snow, laid well and were healthy. We would like to see some of this good professor's fowls after they had roosted high a few nights in some of our trees in this latitude. We are inclined to think their combs would be frosted close to their tails, and haven't we heard

The Potter System

of selecting laying and non-laying hens is used by thousands of poultry keepers in every section of the country and many of them tell us that it is worth \$100.00 to them. When you know the Potter System you can have \$2.00 profit, not \$1.00 loss on every hen you keep and know HOW TO SELECT YOUR LAYING HENS, HOW NOT TO KILL YOUR LAYING HENS, HOW TO BREED ONLY LAYING HENS, HOW TO TELL THE DRONES AND BARREN HENS, HOW TO SELECT THE BEST LAYING PULLETS, HOW TO KEEP FEWER AND MAKE MORE MONEY. The Potter System teaches you all this and much more valuable information on more profitable poultry raising.

Testimonials:

WORTH \$100.00—Dear Sirs: I have your booklet, "Don't Kill the Laying Hen" and your booklet on "Poultry Feeding" and can recommend them to anyone to send their orders to you. They are worth \$100.00 to any man or woman raising poultry. Yours truly, W. F. TANSUE, Easton, Pa.

EXACTLY AS REPRESENTED—Dear Sirs: We received your booklet some time ago and found it exactly as represented. We would not take \$100.00 for the information we received from it. We killed hens after examining them until we were thoroughly satisfied. We recommend your system. Yours for success, J. F. BROWN & SON, Houston, Mo.

Complete—Convenient—Sanitary

That's what Potter Poultry House Fixtures are, and that's why thousands of poultry keepers all over the country use them, and are getting more paying results from their chickens. If you want to save time and labor in your poultry work, take more pleasure in it and have healthier hens, then decide to use our up-to-date fixtures.

Our large 100-page catalog tells all about Potter Fixtures, V. E. Roosts, "Simplex" Trap Nests, W. P. Attachments, Poultry Foods and Supplies of all kinds. Send three cents in postage for our large catalog.

The Potter Perfection Hopper is the best dry feed hopper made and at the right price.

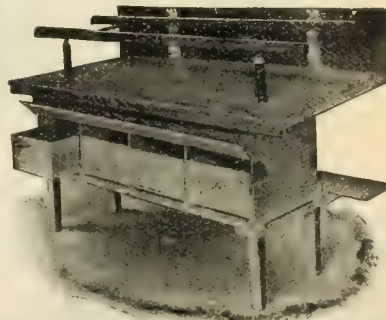

You won't kill hens in full laying condition like this one if you know the Potter System.

Made in three sizes, feeds both sides, has movable partitions for one or five feed compartments. It is the most sensible and satisfactory hopper, and will save many times its cost in right feeding. Plans for sale, too. Circular on hopper feeding will be sent with catalog.

DON'T DELAY, but write today for our large catalog and other circulars. **POTTER POULTRY PRODUCTS ARE FOR PARTICULAR POULTRY PEOPLE.** Are you particular? Then we have something that is bound to interest you and save you money.

that a hen with a frosted comb was put out of business?

These methods are the other extreme. It seems to us like going back to primitive conditions, or worse. These advocates of the extreme in open buildings say a good deal about going back to "natural conditions," but they forget that the present-day hen is not the product of natural conditions, in fact extremely unnatural. She has been born again, as it were. The primitive hen laid but one or two small litters a year. Now behold the 300-egg hen, that is claimed at least. She is certainly not the product of "natural conditions," and we believe she is not the product of these extreme types of open buildings for cold climates. To be sure, these open front buildings have, or should have, warm roosting apartments, with tight curtains buckled down in front, after the plan of the Maine station. This is what saves the fowls, and we have used it in our warm building for years. Prof. Gowell says this plan works well in Maine, and we respect his opinion. When

anything or any system works well, it all depends. It depends in this case on the breed that is kept. Conditions and circumstances vary greatly. Rose comb fowls and the American and Asiatic breeds will no doubt thrive fairly well under this heroic treatment even in cold climates, but how about the single comb Leghorns and Minorcas, with their heavy combs? We think they would lose some of their head-gear in these parts under that system. However, they might do well in mild climates. And so it all depends on the breed and the climate, whether these open-front houses will work well or not. It is claimed, and is of course true, that exercise in the day time will generally keep the fowl warm, but suppose he is hopper fed and is thus able to loaf around most of the time? It thus seems clear to us that no type of building can be laid down for all breeds in all climes, and when poultry writers are advocating these things they should take into consideration the great fact that conditions and circumstances vary,

and what will work good in one case will work disaster in another.

It occurs to our untutored mind that the truth of these two extremes in buildings lies in a middle course, especially for severe climates. Fresh air is all important, but too much will sometimes kill. We believe that a combination between an open front and a closed building is best for this climate, one that can be opened on a mild, pleasant day and closed on cold and stormy ones. This will give fresh air and no doubt reduce the moisture on the walls and ceiling. This frosting and moisture do not trouble us as much as they did. When the litter gets damp we renew it and this helps in keeping it dry. Our warm roosting chamber has curtains in front the whole length of the building, and the temperature there on the coldest night never goes to the freezing point. Our Minorcas are thus never frost-bitten. A neighbor of the writer keeps several hundred White Leghorns and he has read so much about the open front system that he has caught the microbe and erected a hundred-foot building on this plan. We thus expect to see the thing tried out under our personal observation. Its cheapness is one thing that commends it, which is an important consideration in this day of high-priced lumber.

Nothing better illustrates the rapid changes that are made in poultry-keeping than the changes in methods of feeding. Probably more is now being written on the feeding problem than all other matters touching on and appertaining to poultry. As above stated, twenty-five years ago there was little method in feeding and mostly madness in that. Chicks when hatched were thought to be hungry and were gorged with sloppy food. Now they are not fed, or should not be, under forty-eight hours, some say seventy-two, another extreme. Whole grain, generally corn, was about all old fowls received, never any animal or green food, and seldom ground feed. The day of dry skim milk, cut green bone and beef scraps had not yet dawned. Fowls were seldom watered, but helped themselves to snow. When we entered the arena about ten years ago a system in feeding had evolved, and there was one fact above all others impressed upon us by the poultry press, and that was the importance, the paramount importance, of exercise, the prime necessity of keeping the hen busy, "everlastingly at it." Make her scratch for every kernel—scratch, scratch, scratch, that was the slogan. The litter must be deep and clock-work devices were made for throwing out a few kernels at intervals throughout the day, keeping the hen busy the livelong day. This was one extreme.

But, lo! what hear we now? Nothing but dry feeding, hopper feeding, that is the battle cry. Before it was work, now it is meals at all hours, one grand continual feast for fowl. The pendulum has swung to the other extreme again. Between the two lies the truth, as usual. That there is some wisdom in this system of dry hopper feeding, we agree. But it isn't the whole thing. Other systems are as good or better, as we have found from our experience, at least. It may be a good way, for some, but not the only way.

That hopper feeding is a wasteful method goes without saying, but the economy in labor, especially on large plants, is some compensation. In the first place, it is difficult to construct

Shaylor's Barred Rocks

WIN AT BOSTON in a large and one of the *strongest classes ever shown*, nearly all the leading breeders competing. *I win fifth cock, second pullet, second pen, Special for best surface-colored male and other valuable prizes.* For years my stock has won at Boston, Madison Square Garden, New York, and other leading shows. Their quality is of the very best in both *Type and Color*, and I can supply you with either choice exhibition or breeding birds.

EGGS for hatching in season from my best matings at \$5 setting, \$8 for two settings, or \$10 for three settings. Satisfaction assured. Write me your wants today.

YOU CAN'T LOSE IF YOU WILL TRY BEST BROODER

Our Bank Guaranty leaves the return of your money entirely in your own hands, if Best Brooders don't prevent all crowding, are not cheaper and easier to operate, require less time and labor, besides giving you better results in every way. ABSOLUTELY FIREPROOF.

If you want to overcome all your brooder troubles JUST TRY BEST BROODERS. Remember you get your money back without red tape if they don't make good.

Write for circular at once and be ready when your chicks are.

Best Brooder Co., 914 Monroe St., Toledo, O.

hoppers by which the feed will not be wasted. In the next place, fowls will gorge themselves on whole grain and then loaf around, become fat and broody, and especially is this true of the heavier breeds. Egg production will be increased for a time because of the greater consumption of food, but there is a reaction, and the early good effects are more than offset by the ultimate bad effects. We tried whole grain in hoppers until threatened with bankruptcy by the feed bill. The wisdom of hopper feeding is at best an open question, and is so acknowledged by high authorities, as we have found by correspondence with some of them the past season. We confidently believe that the hopper system exclusively would eventually turn the sprightly, active Leghorn into a sluggish, idling fowl, and why not? Can we not by constant breeding with certain environment change the habits and nature of any breed? Could we not cause the broody Rock or Wyandotte to become practically as non-sitting as the Leghorn by line breeding and never allowing them to sit? That this could be done few will question. If so, why cannot the nature of the Leghorn be changed by the hopper system? We firmly believe they would become a class of idlers and drones, losing the foraging instinct, one of its best traits, that they would toil not, and that neither would they spin. And if this would occur with the Leghorn or Minorca, which are now willing to work for a living, what would happen to the heavier breeds?

We have it on good authority that the world was made in six days, and there was evidently no time left in which to construct hoppers. The jungle fowl had none, and this was the natural condition. We believe it best for fowl, as well as man, to work a reasonable amount for a living. A child born in ease and affluence will generally amount to but little. To this rule our president is, of course, a notable exception. Why should the fowl be supposed to possess sense and judgment superior to that of man? A chick born in affluence with corn, wheat and animal food before it in abundance is supposed by the hopper system to balance its ration better than man can do it for it. Under natural conditions there was little danger of a fowl eating too much of one kind of food, but if there is no limit to corn and highly-concentrated animal foods we think they will eat altogether too much of these for their own good. At least we have found it so.

But in all this bushel of chaff relative to hopper feeding we have found a kernel of truth. It is this: Ground feed in hoppers, such as corn meal, bran and middlings, in equal parts by weight, we have found a good thing. Fowls do not like dry ground feed well enough to gorge themselves as on whole grain, and as a reserve store it has its uses in hoppers. If a fowl does not get enough by scratching and foraging, or if kept away from the feed trough by domineering hens, she can fill up at the hopper and go to roost with a full crop, contented. It also saves some labor, and the busy man is not so closely tied to his fowls. And in this connection we will state that we employ the moistened mash, properly seasoned, just the same, two or three times a week at least, and in this mash we place the animal food, but this of course could be put in the ground feed in the hoppers if desired. We find the hens eager for the wet mash no mat-

ter how much or what kinds of other food they have, and anything they are so eager for we believe to a reasonable extent good for them. It is a change and they like it. We feed the greatest variety of whole grain to be had in litter—corn (little in summer), wheat, oats, barley and buckwheat. Fowls, old and young, have free range most of the time, and we can say that we have had more eggs and better health under this system than ever before. Right now, in the moulting period, we are getting better than a 33 per cent egg yield and have had eggs in abundance all summer.

Feeding whole grain and no mash, wet or dry, will not produce the best results in laying, as the Maryland Station has conclusively proven. Three pens were tried, one whole grain exclusively, one whole grain and ground feed and one entirely fed on ground feed. The whole grain pen fell far below the others, and the ground feed pen led, although but little ahead of the pen fed half and half. Hatchability of eggs was equally as good with ground feed. Fowls cannot grind and assimilate enough whole grain to produce the best results. We feed

wet mash at night, believing it best for fowls to go to roost with their crops full of food easily digested, whole grain in litter in morning, keeping them moderately busy throughout the day, and always one or more kinds of succulent green food in winter.

Therefore, to sum it all up, let "variety" be the watchword. As variety is the "spice of life," so it is likewise the price of success in feeding. Variety of green food, variety of whole grain in litter, variety of ground feed in hoppers, with a slightly moistened mash two or three times a week, keeping the fowl's appetite always whetted for something new. By this system, when all other conditions are normal, we believe the greatest good to the greatest number of fowls will result in the greatest number of eggs. But above all, avoid extremes and hobbies, and use horse sense as well as hen sense in caring for fowls. And so systems and methods come and go, like the seasons. They scatter some truth, and the great poultry industry goes marching on, working out its destiny and filling its great mission, and its evolution continues.

Light Brahmas Barred Rocks

RIVER HOME POULTRY YARDS

For several months we have been telling you in this journal that *River Home Light Brahmas* and *River Home Barred Rocks* are in the very first rank and that they are great prize winners. We are now going to prove our statements to be absolutely true.

At the last *Great Chicago Show, December, 1908*, on eleven Light Brahmas entered by us, we won twelve prizes in strong competition. We took 1, 2, 4 cock; 1, 2 hen; 4, 5 cockerel; 2, 4, 5 pullet; 1 pen and 1 display.

At the last *Detroit Show, January, 1909*, on eight Light Brahmas entered by us, we won 1, 2, 3 cock; 1, 3, 4, 5 hen; 1 pullet and 1 pen, being 9 prizes; and on Barred Rocks 2 cock. What further proof do you want? Show birds and hundreds of utility birds for sale at reasonable prices.

Write us your wants and we will quote prices. We sell only eggs which we would be willing to hatch ourselves. *Our eggs are fertile* and will hatch. \$5.00 per 15, or \$15 per 100. Not less than 25 per cent in cash must accompany egg orders, balance to be paid when eggs are shipped.

KANSAS CITY CONVENTION HALL SHOW.

The great Convention Hall show of Kansas City has been pulled off again and great praise is due the management for their efforts in planning and carrying out this show.

This association is favorably situated as far as the show hall is concerned. There is plenty of room and the light is fair during the day, and there is all the electric light that is needed at night. To a person who is accustomed to the level country of our prairie farms, having the show in the top gallery seems a little strange, but to the people of Kansas City, who are used to climbing hills, it is apparently no inconvenience.

Taken as a whole, the show was a success, although the attendance was not as great as usual.

The sweepstake prizes were won by the following:

Silver Cup Trophies: \$150 Silver trophy, offered by the Kansas City Weekly Star for best bird in show, all varieties competing, won by Julius Bachman, Kansas City, Mo., on Silver Laced Wyandotte pullets.

Fifty Dollar Silver Trophy: Offered by Schmelzer Arms Company for the best and largest display by one exhibitor of one variety, won by Fred E. Baldwin, Kansas City, Mo., on Partridge Cochins.

Twenty-five Dollars in Gold: Offered by the Kansas City Produce Exchange for the best Barred Plymouth Rock cockerel, hen and pullet shown by one exhibitor, won by Ambrose Lancaster, Liberty, Mo.

American Poultry Association's Grand Gold Medal: For the best cockerel in the American, Asiatic, Mediterranean and English breeds, won by W. A. Doolittle, of Sabetha, Kan., on Partridge Wyandotte cockerel.

Rhode Island Red Silver Cup: For best display S. C. Rhode Island Reds, won by Frank Oviatt, Eldon, Mo.

Rhode Island Red Silver Cup: For best display Rose Comb Rhode Island Reds, won by Virgil Blakemore, of Fayette, Mo.

Our big friend, Theo. Hewes, broke his resolution and officiated as judge in several varieties, and his decisions indicate that he has not forgotten the fine points of a chicken.

Henry Steinmesch won first cockerel in the Silver Laced Wyandotte class and his string of Wyandottes was said to be the strongest put on the boards since the great world's fair.

E. L. Delventhal won first and second cock, second and fourth hen, first and third cockerel and first, third, fourth and fifth pullet in the Buff Rock classes; also first pen. The Buff Rocks were out in full force and this win points out the quality of Mr. Delventhal's stock.

Wible Bros., of Chanute, Kan., showed only two pens of their superb White Plymouth Rocks and managed to capture the first and second honors, beating other birds of splendid quality.

The Rhode Island Red classes at this show were well filled with some fine specimens. F. L. Oviatt, of Eldon, Mo., one of our advertisers, won his share of the honors. We found on his coops third and fifth cock, first hen, second cockerel and fourth pen.

The Partridge Cochins were well filled and there were some fine specimens in the string. Fred Baldwin seems to be getting back into this fancy and we are glad to welcome him in the fancy again.

George H. Lee, who has made friends

of all poultrymen and a name for himself by his incubators and poultry remedies, has taken up the Single Comb White Leghorn and showed some fine specimens. We found on his pens tickets as follows: Third and fourth hen; fourth and fifth cockerel, second and fourth pullet, and second pen. Such a winning is very creditable and speaks volumes for the stock on Mandy Lee Poultry Farm.

Mr. Churchill showed a pen of White Laced Red Cornish which attracted some attention, and we understand that this pen became the property of the Orchard Grove Poultry Yards during the show. The Cornish fowls seem to be coming to the front. The breeders of this va-

riety insist that the name Game must be dropped, as the fowl has been bred so long under domestication that it has lost all of its fighting qualities. This variety is certainly a great meat fowl.

There was one decision that we did not like, namely, the awards on the Cornish Indian cockerels. We think the second bird should have been first, as he had much more meat on him than the other bird and was equal in color.

During the show a stockholders' meeting was held and all of the old directors, with one exception, were re-elected, and this exception was filled by putting Mr. Baldwin on the board. All of the officers were re-elected.

ORPINGTONS BLACK WHITE BUFF

We bred and sold birds that won 5 firsts and 4 seconds at Madison Square, Boston, Jamestown, Chicago, 1907-8. We won 19 prizes 1908 Cincinnati show. We have just imported best pen of Whites and Buffs England affords, Catalog free. Breeding yards Carey, O. Business address Sta. L, Cincinnati. Brown & Coleman, Importing Agents for Frank Sissons, Worksop, England. NOTE—We attribute our marvelous success in show room in part to our Condition Tablet. Sample for five cents.

Buff, White and Black Orpingtons

FRANK SISSONS, Breeder, exhibitor and winner of Firsts, Cups and hundreds of prizes at the biggest shows in Europe. Amongst others within the last month: Two Firsts, Birmingham, December, 1908; 1st, special and cup, Retford, 2nd Crystal Palace; 1st and special, Northallerton; V. H. C. Dairy; 1st Burton-on-Trent; 1st Newark; 1st Peterborough; 1st Chesterfield, 1st Rotherham. Finest flock of Buff Orpingtons in existence. Every winner bred by exhibitor. Exported to all parts of the world. Grand Cockerels and Pullets carefully shipped. State particulars and requirements and satisfaction is guaranteed. Money may be deposited with Editor American P. J. or with Editor "Poultry" Fleet St., London, Eng.

BARROW'S WHITE LEGHORNS

Are birds of superior quality. 1st, because they are bred for the largest possible number of large, pure, white market eggs. 2d, because they are Standard bred and are winning at the leading large shows including Madison Square Garden. 3d, because they are large size and please our customers. Stock for sale, both old and young, for utility or exhibition purposes.

The Maples Poultry Farm, Geo. A. Barrows, Prop., Box 500, Groton, N. Y.

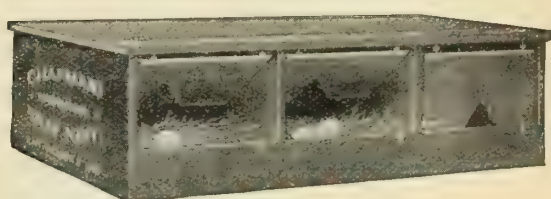

EGGS ONE CENT A DOZEN

EDGAR WARREN,

Eggs may be laid down by methods described in my book, "Preserving Eggs—the Why and How," at a cost not exceeding one cent a dozen. The book is the outcome of the author's experiments and of correspondence with leading authorities in the United States, Canada and Europe. Formulas absolutely reliable. No risk, no trouble, no stale taste. Why not lay down the family supply when eggs are cheap and save one-half the cost next winter? Why sell your eggs at a nominal price when in six months you can get an advance of 100 per cent? Price 50 cents. Circular free.

ATKINSON, N. H.

Chapman's Improved Trap-Nest

Is proclaimed by all poultrymen who have seen it to be the most practical and best made nest on the market today. Hundreds of letters and orders are coming in from all over the United States and without a word of dissatisfaction from a single customer. The reason is, because this nest can be depended upon to absolutely trap the hens.

The CHAPMAN NEST is made upon honor and constructed on mechanical principles that are bound to make it the leading Trap Nest of the world. A trial order will prove it, and we guarantee to refund the money if it does not trap the birds.

Write for Catalogue. - 3 NEST SIZE \$3, 6 NEST SIZE \$6.

FELLOW BREEDERS OF WHITE ORPINGTON FOWLS.

The American White Orpington Club is an organization devoted to the best interests and advancement of White Orpington fowls, both single and rose comb. You are interested in this breed, and we would be pleased to have you become a member of our club, which would allow you full privileges to compete for all special club ribbons and special prizes that are donated each season to different shows throughout the country, and the winning of which we feel sure will prove a good advertisement for your stock. These special prizes are offered on the best American-bred White Orpington cocks, cockerels, hens, pullets and pens. The initiation fee is \$1, which also includes the first year's dues, and the yearly dues thereafter is \$1, payable October 1 for the following year.

We also have a neat club emblem, as illustrated above, for members only, at 35 cents each, which we think would add materially as a stationery emblem.

You know that there has been a great demand and increase in popularity in our breed within the past year, their value fast becoming more recognized as one of the most practical utility breeds in existence, as well as one of the best known laying fowls.

We beg to enclose you an application blank, and trust that we may have same signed and returned to us with the initiation fee, when the club certificate of membership will be promptly forwarded.

We issue a club book on the White Orpingtons that tells of the many merits of our breed, as well as their origin and introduction, and contains a list of all members.

Won't you join? Respectfully yours,
The American White Orpington Club,

By **F. S. Bullington, Secretary.**
Box 328, Richmond, Va.

COLUMBIAN WYANDOTTE CLUB.

The annual meeting of the National Columbian Wyandotte Club was held in room 15, Madison Square Garden, Thursday afternoon, December 31, 1908, and was a largely attended and very lively meeting. Matters of interest to the members were thoroughly discussed and decided, and a great and growing interest in the breed and club was shown. A committee consisting of Messrs. Cleveland, Arnold, Eastman, Sites and Orr was chosen to revise the constitution and by-laws and report at the next annual meeting. The club is to issue a new club catalogue as soon as possible, and any Columbian Wyandotte breeders who are not members already should join at once, in time to have their names appear in the list of members. An almost entirely new set of officers were elected and the club starts the new year in good financial condition with the following officers: President, Thomas F. Rigg, Iowa Falls, Ia.; vice-president, S. Theo. Campbell, Mansfield, O.; secretary-treasurer, Geo. F. Eastman, Granby, Mass. Executive committee: The president, Thos. F. Rigg, Iowa Falls, Ia.; the secretary-treasurer, Geo. F. Eastman, Granby, Mass.; Chas. D. Cleveland, West Orange, N. J.; Chas. M. Murphy, So. Manchester, Conn.; J. H. McDanell, Warsaw, Ky.

The greatest combination ever offered the poultry people—three of the leading poultry papers for one year for only 75 cents. Read our Big 3 offer on page 691.

SPECIAL NOTICE TO CORNISH FANCIERS.

After two years of careful labor the new Standard of Perfection for Dark and White Cornish has been completed and will be sent to all members of the Pacific and American Cornish Clubs and the A. P. A. revision committee within a few weeks. Only 300 copies will be printed. If you want a copy and the privilege of voting for its acceptance or rejection you must be a club member in good standing by April 1, 1909. After its adoption it becomes the property of the A. P. A. and cannot be obtained except in the revised edition of the American Standard of Perfection. Club membership \$1.

H. C. Hayes,
Secretary-Treasurer.

Eureka, Ill.

NATIONAL POULTRY ASSOCIATION.

This association was formed at Weedsport, N. Y., on January 16 to promote the practical work of poultry breeding. The association will confine itself wholly to the practical branches of the industry. Bulletins of much intrinsic value will be issued as occasion demands and mailed free to members. Questions of vital interest will be carefully considered. Membership fee is low and dues are nominal. The president is C. F. Townsend, the well-known writer. Vice-presidents will be appointed in each state. Apply to F. S. Stickle, secretary, Weedsport, N. Y.

BLACK ORPINGTON CLUB.

The National Black Orpington Club will offer club cups in every state that has 100 members. These cups will go to the show where the secretary of said show sends in the largest number of membership applications.

Any show secretary sending in fifteen applications is entitled to a cup for his show.

The state having the largest number of members will be awarded the national championship cup. The dues are but \$1 per year.

Milton W. Brown,
Secretary-Treasurer National S. C. Black Orpington Club, Cheviot, O.

TREATING THE FOWLS WHILE MOLTING.

We sow a piece of ground to oats in the spring, about an acre for fifty hens, and after the 1st of July the old hens are fed no more, only the oats they gather for themselves. In about two weeks they will gather all of the oats up pretty clean. Each hen is then dipped in a solution of chloro-naphtholeum, a teaspoonful of the solution to a half gallon of water. This kills all lice and disease germs in the plumage. They are then put in lots of about thirty in a place in a well-cleaned and whitewashed henhouse for each lot. They are fed very short rations, barely enough to keep them comfortable. As they are in good flesh from eating the oats, this starving has no bad effect. They are kept here two weeks and then turned out on free range, with all the sunflowers they can possibly consume. We give them a free run of the sunflower field, each day breaking over as many heads as they will pick out clean. While the hens were in the lot they were furnished fresh water twice each

day, with a piece of sulphate of iron the size of a pea in each gallon of water. It is surprising how nicely the hens take on a new coat of glossy feathers, the best layers lay on undisturbed all through molting. I have used this method for three years, as we breed high-class White Wyandottes. I suppose this method would do equally the same with any other breed.

The oats give them good flesh, the sudden changing of food, which, by the way, I forgot to mention, that we fed the hens while in the lot a mixed food of wheat, millet seeds, oyster shell and grit, the same we feed the half-grown chicks, a quart to each thirty hens, and the green stuff they picked up in the lot, a 30x50 foot lot for each flock, set in grass. Our hens are always soon over the molt and laying before other hens have commenced that have not been treated by our method. Our free usage of sunflowers has always proven a good thing for our chicks also, but after the hens are well over molting the sunflowers are only fed twice a week. They are the very cheapest chicken feed the poultryman can grow and are shade and protection for the fowls also. If, when the hens are molting, one appears very slow about taking on her new coat, she is killed and made ready to cook. For we want only the very best and strongest in our flocks. The same may be said in regard to any of the flock throughout the year. If one appears disordered or shows a symptom of any disease she is immediately killed and burned to ashes. We have only had to kill three fowls in the last two years and they had probably

been hurt by a dog. Three of the young chicks out of 250 had to be killed on account of sore eyes. If one is persistent disease will not gain a foothold in the flocks. Prevention is ever better than cure.

O. A. Runyon.

CLASSIFIED ADS

UNDER this heading ads will be inserted for six cents per word each month for less than three months, and **four cents per word each insertion for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under **classified headings.** No ads accepted at less than an average of fifty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. **AMERICAN POULTRY JOURNAL** is furnished every classified advertiser for one year, where the advertiser remits \$1.00 or more. When placing your ads remember that advertisers of Classified Ads get better returns from **AMERICAN POULTRY JOURNAL** than from any other poultry journal—none excepted. On writing any of these advertisers mention **A. P. J.**

ALL COPY FOR CLASSIFIED ADS MUST REACH US BY THE 19th OF THE MONTH PRECEDING DATE OF ISSUE

FOSTER'S EGG MACHINE. The breed that pays is the breed that lays, and that breed is the Single Comb Black Orpingtons. So why waste your time and money with a small breed when there is a large one that excels the smaller ones for both laying and market purposes? Col. Foster has by careful selection produced a strain of chickens that has no equal in the show room or in the yard as breeders or layers. Send your name and address, plainly written, and Mr. Foster will send you free a beautiful chromo, together with the history of this wonderful new breed. D. N. Foster, R. F. D. No. 7, Fort Wayne, Ind. 12-3

Cut Your Operating Expenses in Half.

TANDEM THERMOSTAT

My new Tandem Thermostat and Acme Trip Burner with combined damper and flame regulation will do it.

Fits any Incubator or Brooder. Over 50,000 in use. My Acme Trip Burner is provided with an automatic flame controller which is connected with the regulator. My Tandem Thermostat is so powerful it operates both flame controller and damper, as easily and more accurately than any other thermostat will operate damper alone. The result is a saving of half the oil, half the cost of operation.

ACME TRIP BURNER

Acme Burners Fit any Lamp

Tandem Thermostat Fits any Regulator

I furnish all attachments for connecting to both damper and flame controller. I make complete regulators to fit any incubator, also complete lamps. My Acme Automatic is the finest lamp on earth. Has large oil reservoir, seldom needs filling, automatic valve keeps oil always same height on wick, insuring uniform flame, even heat. Acme wicks are double thickness, need no trimming, no smoke, no soot, no overheating the burner, no danger from fire.

I manufacture regulators, lamps, burners, tanks, heaters, etc., to fit any incubator on the market, everything to remodel or repair your old incubator and make it better than new. For only 25 cents to cover cost I will send you my big book of plans by which you can build your own incubators and brooders and save half the purchase price. Any one can do it. More than 25,000 have already built their own machines from these plans. Not a single failure. My new

AUTOMATIC GAS VALVE

This Automatic Gas Valve will appeal to those having gas on the premises because gas is more economical and convenient than oil.

Lampless Brooder

will cost you less than \$4.00 to build. No lamp, no tank, no expense to operate. Greatest Brooder on earth. Write today and let me know what you are in need of. H. M. Sheer, 400 Hampshire St., Quincy, Ill.

Our New Poultry Book

ORIGIN AND HISTORY OF ALL BREEDS OF POULTRY

Illustrated With 198 Colored Pictures of Chickens, Ducks, etc.

This is without doubt the finest and most complete work on poultry ever produced. It gives the origin and history of all the recognized varieties of poultry up to the present time. Also tells how to mate the different breeds for best results. Price of this book is \$1, but we offer you the following combination:

Origin and History of all Breeds, etc. } All For
American Poultry Journal one year } \$1.50
Farm-Poultry one year : : : :

This is the greatest value for the money ever offered to poultry readers. The book alone will give you information that you cannot obtain from any other source, and we have made the price so low that it is within the reach of every one. Send all orders to

**The Problem
Is How To
Raise
'em**

**Darling's
Chick Feed
Avoids Little
Chick
Ailments**

Right Chick Feeding

You can't afford to go wrong on the feeding. It's the feed that's at the bottom of nearly all the little chick troubles. Give chicks food that they can digest and get the benefit of, and they will have a good blood circulation. That will keep them warm and *they'll be lively little fellows* instead of the moping, sleepy kind. Darling's Chick Feed is the right kind of mixture. It's all nutritious and all digestible. It is scientifically compounded. We put in only the ingredients that are adapted to the weak stomachs of little chicks. Selected grains, made right size—no waste.

DARLING'S CHICK FEED

is a low priced feed because it makes strong, fast growing chicks and avoids indigestion, sour crop, bowel trouble and diarrhoea.

In 100-lb. Sacks, Price \$2.50

A GREAT OFFER

Two Leading Publications a Whole Year and a Beautiful Colored Picture all for the Price of One

WE have perfected arrangements whereby we can send the best and most practical farm and family paper published, FARM AND HOME, in connection with our own publication, on the remarkable terms as given below.

Semi-Monthly
National

FARM AND HOME

24 Numbers
Over 600 Pages

We are unable to give but a brief description of Farm and Home, which is unequalled for variety and excellence. It is pure, bright and practical all the way through, teeming with all the latest and most reliable information that experience and science can supply. For village, suburban and rural residents it will be found well-nigh indispensable, meeting the requirements of the entire family. No better proof of its popularity can be offered than its enormous circulation, which extends into every state and territory, each number reaching over two million readers. Sample copy sent free on request.

"Washing Day"

FREE THIS COLORED PICTURE FREE

An extremely attractive picture, appealing forcibly to every lover of child life—and who does not enjoy watching such a scene of complete innocence and happiness as the artist has so carefully depicted in the painting? From an artistic standpoint as well, this picture makes a most favorable impression, with its dainty and beautiful colorings, its accuracy of detail and lifelike arrangement.

The above illustration, although greatly reduced in size, gives a fair idea of its appearance. This picture is made in the very popular panel shape, so desirable for narrow wall spaces and measures 12x20 inches in size. It is mounted on heavy lithographic paper with narrow white margin all around for framing, if desired.

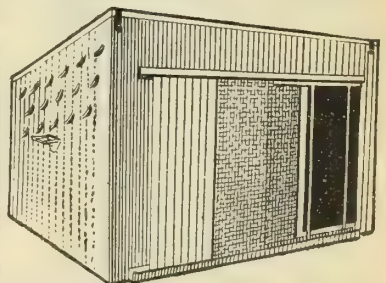

OUR OFFER

American Poultry Journal, One Year 50c } Both For 60c
Farm and Home, One Year 50c } Only

As a special inducement for prompt replies to all who accept the above offer within thirty days, we will also send the picture above described without further charge. Address all orders to

American Poultry Journal Pub. Co., 113 So. Clinton St., Chicago, Ill.

RAT-PROOF COOP

Protect Your Chicks From Rats, Mink, Weasel, Skunk, Lice and Mites
The Sanitary Metal Brood Coop

is just the thing you've been looking for. It's a boon to poultrymen for it means safety, clean quarters and health to the brood. It's made entirely of galvanized iron, not a splinter of wood in it. You know you can keep it vermin-proof. Purge it in the fire if you want to.

No Dampness, No Roup

Chicks and mother always perfectly dry. Exclusive pattern made and sold only by us. Adds 100 per cent to profits and keeps down cost and expense of poultry raising. Made in knock-down form. Can be taken apart and stored in little space when brooding season is over.

Write for free circular, fully describing this and full line of other sanitary appliances.

DES MOINES INCUBATOR CO.

Every Egg a Chick

The **Triumph Incubator**, owing to its many patent features, is the leader and will hatch every fertile egg. It has a unique system of hot water heating, which, with the automatic regulator, keeps the temperature at a uniform degree. Is very simple, easy to operate and takes little oil. Supplies its own moisture and is self-ventilating. Has heavy copper tanks and boiler, thick insulated double walls, chick nursery and high egg chamber enabling it to hatch goose, duck, turkey and chicken eggs successfully. Built by incubator experts. Thousands in use. 16 years' experience.

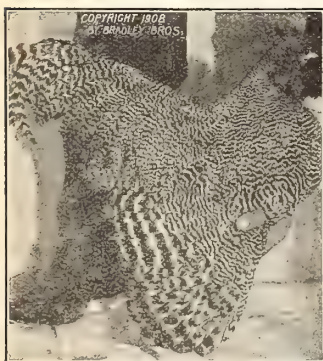

Triumph Incubators and Brooders

are sold direct from my factory at **Lowest Wholesale Prices** without a middleman's profit. Sent out on 60 days' trial and strongest guarantee. Large, finely illustrated Poultry Book and Catalogue free. It contains a mine of valuable poultry information and you should have it.

R. F. NEUBERT, Dept. 23, Mankato, Minn.

GRAND SUMMARY---WORLD'S 20 YEAR 1st PRIZE RECORD

World's Champion of 1906,
Our \$2,000 Male.

Winner of First Prize and Sweepstakes Special at New York's Greatest Barred Plymouth Rock Show, nearly 500 in line. Is descended from the sire of First Chicago Cockerel, 1902; also from the sire of First Chicago Male, 1906. These and other Chicago 1st Prize Winners were bred by us and hatched by customers FROM EGGS WE SOLD.

For the past two years I have won the female championship on females; all "Lee Belles," different birds each time competing against birds from all the biggest American and Canadian yards. In regard to publishing this letter, you can use any or all of it, anywhere, any time, for any purpose you see fit, because I like to give credit where credit is due, and its contents are all facts.

F. A. JAMES, Ottawa, Canada

Won by Bradley Bros., Lee, Mass. BARRED PLY. ROCKS

AT MADISON SQUARE GARDEN

THE LAST 20 YEARS

BIRDS WE BRED AND RAISED HAVE WON

{ 1st PRIZES, TOTAL—MORE by over 11 per cent }
{ 1st PRIZES on COCKERELS—MORE by 50 per cent }
{ 1st PRIZES on MALES—MORE by 42 per cent }
than any other exhibitor has won on ANY STOCK

OUR "LEE BELLES"

Again Demonstrated Their Superiority by Winning First Prize in Each of the two Largest Shows of '06-'07 Season, also the Championship Prize in what was considered the Strongest Female Competition of the Year, and since have made other Phenomenal 1st Prize Records.

800 Breeding and SHOW BIRDS, both old and young, bred from these same lines of New York and Boston First Prize Winners **FOR SALE**. We also make a specialty of furnishing carefully Mated Trios and Pens for breeding Exhibition Cockerels or Exhibition Pullets.

EGGS for Hatching from Best Pens Only, \$7 per 13, \$20 per 39---the same as have furnished First Prize Winners for others and CAN DO IT FOR YOU.

I have in my yards a Bradley Bros.' cock bird that took first prize in the Wisconsin State Poultry Show, 1908. Was offered \$100 for him—a genuine offer, not "wind." Am going to have nothing in my yards but Bradley Bros.' blood. Have tried many others, having purchased two \$50 males and several at \$25.00. Also several high priced females, but none of them please me as well as yours.

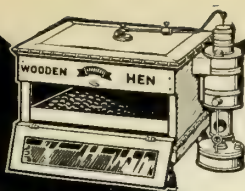

FRED BADGER, Oshkosh, Wisconsin

Back and Tail of Nephew of "World's Champion of 1906." Through his dam he is grandson of First Prize New York Cockerel, 1904.

BRADLEY BROS., - Box 909, - LEE, MASS.

FREE: Illustrated Printed Matter Telling of Winnings at Kansas City, Chicago, New York, etc.

Stahl Incubators were among the first to be put on the market; to-day they stand as they did then—the best—approved by thousands of particular fanciers the world over.

This isn't luck—it's merit—perfect incubator value, produced by the right kind of material and workmanship, backed up by an unbroken line of splendid results. The

Hatch Chickens By Steam

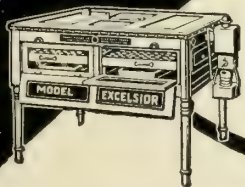

Excelsior and Wooden Hen INCUBATORS

have a standard hatching record of a chick from every fertile egg; they maintain this splendid showing because all features of their construction—heat, moisture, ventilation, and similar details—are carefully looked after and perfectly worked out.

The **Excelsior** or **Wooden Hen** will hatch a brood before your hens stop laying. You can market your early broilers and mature pullets into quick layers at a time when both will yield an extra big profit.

Buy a "Stahl" and eliminate trouble and worry. Catalogue illustrates complete line of Incubators, Brooders, Poultry Supplies, etc. Free on request.

"RINGLETS" STAND ALONE, VICTORS OF THE FIELD . . .

At America's Imperial Show, Madison Square Garden, New York, Winter of 1907-1908 . . .

E. B. THOMPSON'S BARRED P. ROCKS

As usual win the leading prizes and achieve the highest honors that can come to any breed. First prize on cockerel, first prize on cock, the Great National Silver Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. Double the number first prizes of any competitor. Special for best shaped male, special for best headed male, special on hen, special on pullet, the Sweepstakes Special in Gold for best Plymouth Rock on exhibition of either sex and any variety. The Imperial prize of the show, special for champion male.

For more than twenty years at New York my "Ringlet" victories have been complete. Exhibited by me personally they have won a grand total of 127 prizes, 69 of these being firsts and specials, being more first and special prizes than won by any competitor in the history of the show. These include the \$100 Champion Challenge Trophy, won three times; the \$100 Association Cup, won three times; the \$100 Sweepstakes Cup offered by the President for best Plymouth Rock cock, cockerel, hen and pullet, any variety.

The "Ringlet" world's record at New York four years in succession is a page of history. The "Ringlet" record of first on exhibition pen three years in succession is the undisputed Champion. My Clean Sweep of FIRST, SECOND, THIRD, FOURTH AND FIFTH PRIZES on pullets has never been approached in Madison Square Garden, and stands alone and unequalled.

One thousand grand breeding cockerels for sale; elegant hens and pullets in any number. Show birds fit to win in any competition. AMERICAN POULTRY JOURNAL

Our Young Stock In Fine Condition

And there is no doubt about it that there are many prize winners in the flock, and it is a case of first come, first served for exhibition birds for the fall and winter shows. We have only a few of our breeders that are for sale. Communicate at once.

PINE TOP POULTRY FARM, HARTWOOD, SULLIVAN CO., N. Y.
John H. Hallock, Prop., Breeder and Exhibitor of Barred P. Rocks & S. C. W. Leghorns

POTTERIZE YOUR FLOCK!

by using science and system in picking out the layers from the non-layers and drones. Keep only the most prolific layers for your breeders. Two hundred eggs a year from each hen is easy if you keep only laying hens in your flock and breed from them alone. **The Potter System** is used by over 25,000 poultry keepers and is recognized as the greatest discovery of the century in the line of selecting laying and non-laying hens and egg production. Keep only layers and cut down the expense of feeding loafers and drones. When you Potterize your flock you use the Potter System on it and can keep fewer hens, get more eggs and make more money by using it.

DON'T KILL THE LAYING HEN

is the title of our book on the Potter System. It is without a doubt the greatest book ever published on the subject of laying hens and egg production. Our new 100-page book is just out and it contains knowledge not found in any book ever published. The table of contents given below will give you some idea of the many subjects covered and the valuable knowledge it contains:

How the egg grows; how nature controls the laying organs; the secret of the Potter System; how to pick out the non-laying hen; how to determine the first stage of egg development; to know how far the hen is toward the laying point; how to pick out the hen that is laying; to know the hens that are the most prolific layers; to know how and when to cull the non and poor layers out of the flock; to know the ones to sell and the ones to keep; why early spring is the best and most practical time to cull the poor and non-layers out of the flock; how to tell the hen that has laid out a batch of eggs and other information regarding setting hens; the best way to break up the broody state; how eggs can be produced in winter and some of nature's laws regarding egg development explained; how the laying organs are affected; when the hens are infested with vermin; how to avoid wintering hens that are likely to be poor winter layers; how over feeding before egg development starts may reduce the egg production; the laying hen should be educated, when, how and where; how to separate the poor layers from the good without handling, or how they will separate themselves; how to buy hens in the fore part of winter that would make good winter layers, and sell them again at a good profit in the spring; how roup and similar diseases affect the laying organs of hens, also how the laying organs become disabled by other causes; ten ways to suspect hens that are not laying; three ways to prove their laying condition.

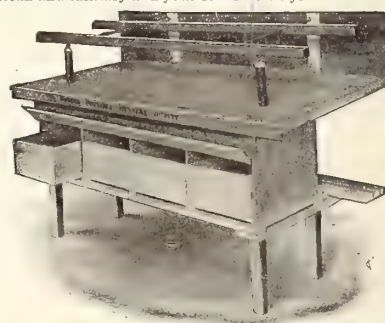

You should not delay in learning the wonderful Potter System which is helping so many poultry raisers to make more money on their fowls. Our new book will prove a new revelation to you in the line of keeping only laying hens.

Potter Poultry Products are for particular poultry people and if you are particular you will write today for our large new catalog and circulars on the Potter System. Three cents to cover postage will bring them to you by return mail.

T. F. POTTER & CO., Box A, Downers Grove, Illinois

Potterize Your Hen House Too

by using Potter Poultry House Fixtures, then you will have a complete, convenient and sanitary equipment in your hen house. Potter Fixtures have been on the market for over eight years and are used and recommended by thousands of poultry raisers. They save you time, labor and worry and keep the quarters clean and sanitary and your fowls healthy.

Our new 100-page catalog, just issued, tells all about Potter Fixtures, Perfection Feed Hoppers, Trap Nests, Incubators and Brooders, Potter's V. B. Poultry Foods and all kinds of supplies. Send for our large catalog showing the very best goods to be had and at the right prices.

Get "LEE'S" Book FIRST

Don't be misled by statements of manufacturers who talk loud and long about their "testimonials" but never tell how they are obtained, and are very careful to give only a meager description of the "inside" of their machine.

Certainty of Results vs. Guesswork accurately explains the difference between the Mandy Lee and all other incubators. In our machine you **know** what your hatch will be after the first test-out; in others, the result is **always** in doubt, and with reasonable certainty of a large number dead in the shell on the 21st day.

We **guess** at nothing. We make favorable hatching conditions **at the eggs** during **each** of the **21** days of incubation, regardless of conditions outside the machine.

"Mandy Lee"

Incubators and Brooders

are best from every standpoint. They develop more of the weaker germs—those that in other incubators would die from the 10th to 19th day; they hatch larger percentages of strong, healthy chicks during the **entire season**. The brooders—both fireless and lamp-heated—raise practically every chicken entrusted to their care.

We offer you a Certainty; others a Possibility.

Which do YOU prefer.

Send for catalog, and booklet "Incubator Hygrometry," describing the Mandy Lee Hygrometer, the only reliable hygrometer (or moisture gauge) adapted for use in all incubators. **FREE!**

Lee Fireless Brooders

are an absolute success outdoors in any situation warmer than 18 deg. above zero—always preferable to lamp-heated brooders for indoor use. Perfect ventilation; no dirty, smoky lamps; no danger from fires. Better and stronger chicks. Send for catalog and descriptive circulars.

Just Three Things

are required to make 90 per cent to 100 per cent hatches every time and in any season, climate, or altitude: 1st, **correct heat**; 2d, **correct moisture**; 3d, **correct ventilation**. In other incubators it's mostly guesswork; in the Mandy Lee it's a scientific certainty. In other incubators hatching conditions are right if you guess right; in the Mandy Lee they are right if you follow simple instructions.

Correct Heat means 103 degrees at the upper surface of each and every egg, gradually increasing to 105 degrees during the last week. Measured accurately with a Mandy Lee Thermometer, distributed by our patent perforated-tube system, and easily regulated within a variation of one half degree. Most other incubators vary from 2 to 5 degrees.

Correct Moisture means 65 per cent at commencement of incubation, gradually decreasing to 50 per cent during 3d week. Measured accurately with a Mandy Lee Hygrometer, the only instrument suited to incubator work, and regulated within a variation of 2 or 3 per cent. Most other incubators vary from 20 to 30 per cent and with no measurement or regulation.

Correct Ventilation means a gradual change of air in the egg-chamber once every half hour. Automatically regulated by simple adjustment of damper on heater. Some other incubators give a change of air every 5 minutes, causing a rapid draft; others change the air only once in 24 hours with result that the air becomes foul or stagnant.

Wild Berry for Comparison

No Introduction Necessary

Everybody Knows Duston and His White Wyandottes

The veriest amateur and the veteran breeder all know Duston. As Homer Davenport once said at New York: "Isn't it wonderful how a man can be known in every portion of the world from advertising his White Wyandottes as you have, Duston?" Not only am I known by my own advertising, but thousands and thousands have advertised me from their winnings made with birds sold direct and *hatched from my eggs*. Hardly a mail comes to me today but some customer writes as did the following: " * * * Mich. Last month I won first Cockerel at Saginaw, and A. P. A. Diploma for highest scoring Wyandotte ckl. The ckl. was hatched from eggs I bought of you last year, etc.—A. J. K." I could give hundreds of these testimonials. Now "everybody" knows Duston's stock sold direct has won Boston, New York, Philadelphia, Indianapolis, Nashville, Kansas City, the Pacific Coast Shows. In fact, for years all over the world where competition is the strongest, besides my own winnings at New York for three years past, to say nothing of my previous winnings at Boston and New York.

What do you think of 1-4-5 ckls. at Madison Square? What do you think of 1-3 pullets? of 2nd hen (considered by many unequaled as a Wyandotte)? What do you think of 2nd pen in a class of 25, all competing and *only set back from first on account of undeveloped condition of cock's tail?* and 4th cock? and 1st display?—this for the second time in three years!

What about shape special on male? What about color special on male? Don't these things mark the breeder of quality and quantity of it? The specials this year at New York were not as many as usual. It doesn't take big specials to bring out, at the Garden, the hottest class in the land! Birds not mentioned here winning first honors a week later at the biggest Eastern show. Doesn't this keep

Duston at the Head

the position long conceded to him? If you want quality write me. Stock of all grades always for sale. Eggs from beautiful matings, all mated by me to produce winners. \$5.00 a set; 2 sets \$8.00; 3 sets \$10.00; 5 sets \$15.00, and \$20.00 a hundred. Send 10c for illustrated catalogue. The breeder who has made possible the "World's Best Flocks."

METAL MOTHERS

OUR NEW DISCOVERIES MAKE

POULTRY KEEPING EASY AND PROFITS SURE

OUR MACHINES were used exclusively in the original Philo System plant where over \$1500 FROM 60 HENS IN TEN MONTHS has been cleared from the sale of eggs, baby chicks and fowls raised on a city lot 40 feet square. One of the largest hatching plants in America saved over \$700 this year by using our System of brooding. We sell the best brooder ever made for only \$2.50.

One party hatched and raised \$500 worth of poultry last year with four Metal Mothers, and hundreds of others are delighted with our machines and our new way of raising poultry. Our combined machine hatches and broods perfectly at the same time with only one lamp and one-fifth the oil used in other machines. Once filling the lamp completes the hatch. It runs as steady as a clock in any room from cellar to garret, and our Long Burning Safety Lamp runs on for weeks without attention. It is the only machine that airs the eggs in the natural way and applies the heat to the chickens like the mother hen.

THE BROODER-HATCHER

The Cycle Hatcher Co., Elmira, N. Y.

Dear Sirs:—As per your letter I will send you an order for six machines in a few weeks. Am hatching with the one I now have. Got 47 chicks from 50 eggs. Have abandoned all my 200-egg machines. Am practicing in my store with a view to starting my 40-acre poultry plant near town here. Think I can sell a lot of these machines next year.

H. W. White, 311 Ada St., Yankton, S. D.

The Cycle Hatcher Co., Elmira, N. Y.

Gentlemen:—The hatcher we bought of you last May is all right. We took off two hatches with it; one of 43 chicks and one of 46 chicks. All good ones.

Yours respectfully, G. W. Simpson, Austin, Pa.

The Cycle Hatcher Co., Elmira, N. Y.

Sirs:—You people may be interested to know what an experiment with one of your Metal Mothers has done for us. On the 17th of Oct. we put 40 eggs in your machine, 38 of them being fertile, and when hatching time came we were surprised to find 38 chicks from our 38 eggs. This we think an excellent record, for the machine had been placed out in the open weather, the only protection being an old tin covered box. Yours respectfully, J. P. & L. L. Hollinger, R. I. Red Farm, Wither, Pa.

OUR 1909 PATTERN METAL MOTHERS are the perfected results of the latest discoveries in artificial incubation. They will hatch hens, ducks, turkey and goose eggs equally well and at the same time. Regulation of moisture and heat entirely automatic. One Metal Mother complete \$7.50; two, \$14; four, \$24. One Hatcher complete \$5; two, \$9; four, \$17; six, \$24. Catalogue free.

Cycle Hatcher Co. - 214 Wm. St., Elmira, N. Y.

MATING LIST FOR 1909

Address, Owen Farms

Vineyard Haven, Mass

1883—BRED IN THE BERKSHIRES—1909

Twenty-five years' experience breeding. Barred Rocks and Silver Laced Wyandottes. Winners in the leading shows of the East. Farm raised, free range. A few choice cockerels and pullets, both cockerel and pullet bred, for sale. Reasonable prices. Eggs, one setting \$5.00, two settings \$8.00, three settings \$10.00.

WESLEY B. BARTON, Box 400, DALTON, MASS.

White and Buff Wyandottes

EGG-LAYING AND PRIZE-WINNING STRAINS

At the Vermont State Fair this season we won four first, three second and two third prizes. The poultry exhibit at this fair was said to be the largest ever seen in New England—over four thousand birds competing. This number does not include pigeons. The competition in the Wyandotte classes was very strong. It was worth while to win there. At the different county fairs we did, of course, even better.

While we breed for quality our birds must first make good as layers before they are admitted to our breeding pens. We use trap nests and keep a complete set of records. Every bird is raised on free range and has every opportunity to make the strong, healthful growth that the Green Mountain country favors in all kinds of live stock.

Eggs for Hatching—White Wyandottes: Utility Stock, \$1.50 for 15 and \$6.00 per 100. From best pens, \$3.00 for 15 and \$10.00 per 100. Buff Wyandottes, \$3.00 for 15 and \$10.00 per 100. Send for circular.

OTTERBURN POULTRY FARM, W. R. Frazier, Manager, Lock Box B11, Pittsford, Rutland County, Vermont

RIVER HOME POULTRY YARDS

LIGHT BRAHMAS BARRED ROCKS

For several months we have been telling you in this journal that River Home Light Brahmas and River Home Barred Rocks are in the very first rank and that they are great prize winners. Last month we cited our recent Chicago and Detroit winnings as proof of our statements, but since that time great poultry shows have been held at Boston, Toledo and Indianapolis and of course we were there. We have a large list of prior prize winnings, but will now tell you only about the prizes we have taken in the last ten weeks.

At the Last Chicago Show December, 1908—On eleven Light Brahmas entered by us, we won twelve prizes in strong competition. We took first, second and fourth cocks; first and second hen; fourth and fifth cockerels; second, fourth and fifth pullets, first pen and first display.

At the Last Detroit Show January, 1909—On eight Light Brahmas entered by us, we won first, second and third cocks; first, third, fourth and fifth hens; first pullet and first pen, being nine prizes; also on Barred Rocks, second cock.

At the Last Boston Show January, 1909—On two male Light Brahmas entered by us, we won fourth cock. These birds were shipped 700 miles and were unattended by us.

At the Last Toledo Show January, 1909—On Light Brahmas we won first, second, third, fourth and fifth cocks; first, second, third, fourth and fifth hens; first, second, third, fourth and fifth cockerels; first, second, third, fourth and fifth pullets; first pen and on Barred Rocks third and fourth cocks and fourth cockerel.

At the Last Indianapolis Show February, 1909—On Light Brahmas we won first, third and fifth cocks; first, second and fourth hens; third cockerel; fourth and fifth pullets. These prizes were won in strong competition.

WHAT FURTHER PROOF DO YOU WANT?—Show birds and hundreds of utility birds for sale at reasonable prices. Eggs \$5.00 for 15, \$15.00 per 100. Our eggs are fertile and you can depend on them.

River Home Poultry Yards, T. H. Tracy, Owner, F. J. Stamm, Mgr., Box B, Perrysburg, Ohio

Don't It Seem Reasonable to You

White Plymouth Rock pens headed by brothers, sons and grandsons and containing sisters, daughters and granddaughters of first and second place, New York and Boston winners, that are raised up in this cold, healthy Adirondack climate, have got the vigor and stamina that spells success in the poultry business. We claim

Lamon's Northern Raised White Plymouth Rocks

are the hardest fowls in existence. Pullets averaged 211 eggs last year. An order of an exhibition bred to lay cockerel or a setting of eggs will convince you that the hardy kind are absolutely the best. **EGGS**—Only \$5.00 per 15; \$9.00 per 26. Send for circular and testimonials today.

HARRY M. LAMON

Watertown, N. Y.

Your Chicks Are Eating But Not Digesting

It's not a good sign when your little chicks stand around and mope. The trouble is not very serious but it may become serious. They are not digesting their food. Consequently they are not getting any benefit from what they eat. There is nothing to make them grow strong and when chicks do not gain strength day after day, they grow weaker rapidly. It's a case of stomach trouble. You must remember that their stomachs are weak. They must have food that is adapted to their condition. But weakness is not all—it's only the beginning. Chicks that do not digest their food soon chill. The blood grows stagnant and they become lifeless and a prey to one or more of the common little chick ailments, such as roup, gapes, chronic indigestion, bowel trouble, etc. That's the condition and those are the diseases that cause little chicks to die by thousands every year.

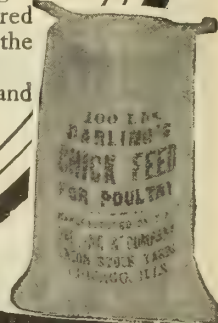

DARLING'S CHICK FEED

Food
Undigested
Leads to a
Long Train of
Little
Chick
Ailments

Darling's Chick Feed is not only eaten but it is digested. Chicks start to grow right from the first because they get the benefit from it. Chicks require nutrition. Darling's Chick Feed has it. It has the right food elements for little chicks and it is prepared right. What it does for chicks—the growth, the health, the strength, the freedom from all little chick ailments—these are the measure of its value. Darling's Chick Feed is free from weed seeds, from mill sweepings and trash. It is all digestible, all nutritious. There is no waste.

In 100-Lb. Sacks, Price \$2.50

Try Darling's Chick Feed and watch your chicks grow big and strong. Order from nearest office to save freight.

Our Standard Poultry Food Line

Most poultrymen are familiar with the Darling line of standard poultry foods. Each food is specially prepared to accomplish a particular purpose, nothing at random, nothing that has not been proven. Feed Darling Foods and you feed systematically.

ASK INSURANCE AGENTS

QUALITY AND SAFETY

THE CASE REVIEWED: During the Summer of 1908, the National Board of Fire Underwriters adopted "Rules and Requirements" for the construction of Incubators and Brooders. The membership of the National Board of Fire Underwriters consists solely of fire insurance companies and includes the principal companies doing business in the United States and Canada. Copies of the National Board's "Rules and Requirements," in booklet form, can be obtained free on request from the Underwriters Laboratories, Inc., 382 Ohio Street, Chicago, Ill.

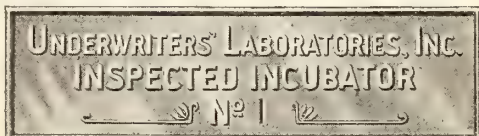

October 15 and November 1, 1908, respectively, the oil-heated Incubators and full line of 1909 style Brooders manufactured by Cyphers Incubator Company were approved by the Underwriters Laboratories, Inc., and the "label service" was granted this company. The Underwriters Laboratories, Inc., are maintained by the National Board companies and other subscribers for the express purpose of testing and approving (or disapproving) articles in common use that have a bearing on the fire hazard.

Since November 1, 1908, each and every Incubator and Brooder manufactured by Cyphers Incubator Company has been built in strict accordance with the "Rules and Requirements" of the National Board of Fire Underwriters and has been inspected in our factory at Buffalo, N. Y., by a representative of the Underwriters Laboratories, Inc., and has had affixed to it, before being crated for shipment, the "Inspected Incubator" or "Inspected Brooder" label of the Laboratories, issued in serial numbers, this work being done under direction of the National Board of Fire Underwriters.

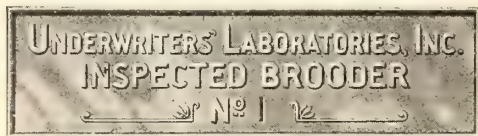

General View of Standard Cyphers Incubator, 1909-Pattern. Equipped with Fire-Proof Heater, Fire-Proof Lamp and Fire-Proof Lamp Enclosure

REDUCED INSURANCE RATES: The fixing of insurance rates is done by district, state and local rating organizations. These rating boards are active members of the National Fire Protection Association, and with the National Board of Fire Underwriters are deeply concerned in the same laudable object—a reduction in the loss of property by fire. The insurance labels, when affixed to devices by the Underwriters Laboratories, are equivalent to the official signature of expert mechanical engineers and give public notice to fire insurance companies and fire insurance agents that the articles which bear the labels are the safest to use. That is what the labels stand for! That is what they mean! That is why they are used!

Form of Brass Label to be found (in Serial Numbers) on every 1909 Standard Cyphers Incubator, all Sizes

Form of Brass Label to be found (in Serial Numbers) on every 1909 Brooder of Cyphers Company's Manufacture

RECOGNITION OF INSURANCE LABELS

It stands to reason that the fire insurance authorities will recognize the work of their own experts and reward the use of their own labels.

The one sure and convincing way for readers of this advertisement to find out just what the labels stand for and the recognition that is given them by insurance companies is to ask your local insurance agent. Please do so without delay.

ASK YOUR INSURANCE AGENT if he knows about the National Board of Fire Underwriters, an organization now in its forty-third year.

ASK YOUR INSURANCE AGENT if he knows about "The Labels" of the Underwriters Laboratories, Inc.

ASK YOUR INSURANCE AGENT if he knows about the rating organization that fixes the rates in force in the territory where you live.

ASK YOUR INSURANCE AGENT for his personal advice about using "Approved and Labeled" Incubators and Brooders in or near property ON WHICH YOU CARRY INSURANCE, as compared with those that HAVE NOT BEEN approved and DO NOT BEAR THE LABELS.

BOON TO POULTRY RAISERS: On investigating this important matter (important to you as a property owner) you will learn that Cyphers Incubator Company, by its foresight and energy, has secured a great boon to poultrymen, to farmers and to all others who wish to use incubators and brooders in or near insured property on which they carry insurance; that Cyphers Incubator Company has been instrumental in enabling poultry raisers to buy incubators and brooders that can be used in many States of the Union without any extra charge for insurance; that Cyphers Company has made it possible to obtain insurance in populous territory, on buildings and contents in or near which incubators and brooders are used, where before it was impossible to do so; that in still other states Cyphers Company has effected highly satisfactory reductions in insurance rates for permission to use incubators and brooders of the approved and labeled kind. Write today for our big free Catalogue.

ABOUT THESE LABELS

"NO CHARGE" STATES:

in or near insured property, PROVIDED they are built in accordance with the National Board's Rules, bear the OFFICIAL INSPECTION LABELS of the Underwriters Laboratories, Inc., and are properly installed:—

OHIO
KANSAS
NEBRASKA
OKLAHOMA
WYOMING

ILLINOIS
TENNESSEE
MINNESOTA
NORTH DAKOTA
SOUTH DAKOTA

MICHIGAN
ARKANSAS
COLORADO
TEXAS
W. VIRGINIA

MISSOURI
KENTUCKY
MISSISSIPPI
NEW MEXICO
ARIZONA
NEVADA

CALIFORNIA
OREGON
WASHINGTON
MONTANA
IDAHO
BRITISH COLUMBIA

Reduced Rate States:

In the following States big reductions in insurance rates are now obtainable, PROVIDED, the Incubators and Brooders to be used are built in conformity with the "Rules and Requirements" of the National Board of Fire Underwriters:—

NEW YORK STATE: In this State formerly the use of any Incubator or Brooder was prohibited in or near insured property; now for three out of four types of Cyphers Incubators and Brooders no charge is made; for the other type only ten cents per year is charged on each one hundred dollars of the amount of the policy carried, for permission to use three largest sized Standard Cyphers Incubators of approved construction. **NEW ENGLAND STATES:** In this territory the rate that was in force previous to January 1, 1908, for a permit to use Incubators and Brooders in or near insured property has been reduced 90 per cent., PROVIDED, the machines to be used bear the labels of the Underwriters Laboratories, Inc. **PENNSYLVANIA, NEW JERSEY, MARYLAND, DELAWARE AND DISTRICT OF COLUMBIA:** The rate in force in this territory previous to January 1, 1908, has been reduced 90 per cent., PROVIDED, the Incubators and Brooders to be used are "listed as approved by the National Board of Fire Underwriters."

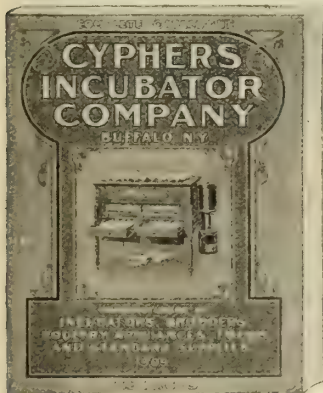

GET THE LABELS:

MAKE NO MISTAKE about the value TO YOU of these insurance labels! They stand for something!

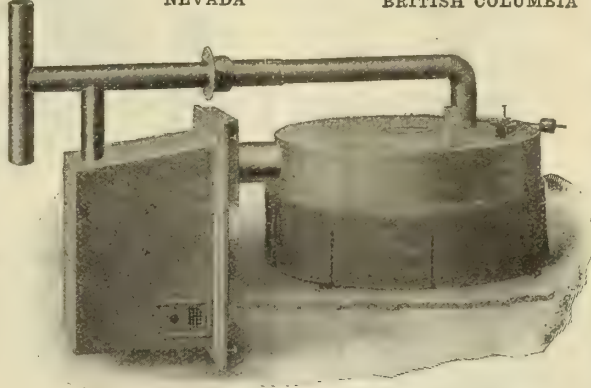

They mean greater safety and the lowest obtainable fire insurance rates to every user, to every policy holder. You need not accept our statement; put the question squarely to your local insurance agent. Ask him! He knows and will gladly tell you. Show him this advertisement!! Your doing so will be a favor to us and profitable to you. If you are now paying an extra rate of insurance on your home, or the contents thereof, on account of using a non-approved incubator, you can save money and avoid needless risk by using an approved and labeled machine.

REMODELING OUTFITS:

Old customers of ours will be glad to learn that we have completed arrangements with the Underwriters Laboratories, Inc., whereby we can furnish brand new, fire-proofed heaters, together with Safety Lamp Enclosures, for remodeling any size Standard Cyphers Incubator built and sold since this company has been in business, and that these remodeling outfits bear the Inspection Labels, thus entitling the owners of remodeled Standard Cyphers Incubators to all the benefits of the insurance labels. For prices of Remodeling Outfits see page 36 of Main Catalogue, or write for special Remodeling Circular.

FREE, POSTPAID, ON REQUEST

CYPHERS COMPANY ADAPTABLE HOVER

FIRE-PROOFED, INSURABLE, SELF-REGULATING AND SELF-VENTILATING

Hover itself is fire-proofed and bears the Underwriters Laboratories "Inspected Brooder" label as a separate article, therefore can be used with safety in any place that is suitable for chicks. Is unequalled for adaptation to home-made Brooders built of piano boxes, packing cases, etc.; to any type of non-insurable Brooder that is 22 inches high at end or rear and not less than 30 inches square; also for use in roosting coops, portable houses, etc., or in ordinary brooding houses with or without auxiliary heat. This standard machine-made, fire-proofed, self-regulating and self-ventilating Adaptable Hover is used for heating and brooding the chicks in all styles and sizes of Cyphers Company Brooders for 1909. Only line of approved and labeled brooders in existence at the present time. Price surprisingly low. Complete illustrated description in big 212-page Main Catalogue.

QUALITY AND SAFETY COMBINED:

Standard Cyphers Incubators, for many years, have been acknowledged to be the World's Best Hatchers. On account of the fact that they can always be relied upon for big hatches and because the chicks are strong and live, Cyphers Incubators are chosen and used in preference to all others by persons who are in the business for a living and cannot afford to lose a hatch, as well as by the foremost experts in poultry raising. To make money, to save money, you need the Cyphers. It has been "Standard" for years and is now used by a larger number of prominent, successful poultrymen than all other makes of incubators combined. It has always been safe to use—NOW IT IS EVERYWHERE INSURABLE.

GREAT FREE BOOK:

The Best Free Book on the poultry business is the Cyphers Company 212-page Annual Catalogue for 1909 (pages 7½x10½ inches), with illustrated chapters on Feeding Chickens, Laying Records, Incubating, Brooding and "What the Poultry Business Is." It contains full information about the new rules of the Fire Insurance Companies; photographs of superior, standard-bred farm fowls and prize winners at America's big shows; photographs of the highest priced birds ever sold and letters from their owners; about seventy pictures of the world's biggest poultry and duck plants and experiment stations; over fifty photographs of leading breeders whom you have read about, but perhaps have never seen; also flocks of choice fowls raised by women fanciers. It contains illustrations of more than seventy different articles manufactured by Cyphers Company's more than 500 employees on its five acres of floor space—the largest Incubator, Brooder and Poultry Supply Plant in existence. Tells all about our Electric Hatchers and Brooders and the Mammoth Incubators, holding 8,000 to 40,000 eggs each. Write today for this Big Free Book. Mention this paper and address nearest office.

Your Name and Address That's All

OUR 1909 EDITION is the most practical text book on Strawberry growing ever written. It's worth its weight in gold because it teaches the Kellogg method of growing the world's record crops of big red berries. Every detail of the work is illustrated by photo-engravings. You read it by pictures. They show you just how to do everything from beginning to end. Strawberry growers who follow the Kellogg way are getting more fancy berries from one acre than the other fellow gets from two. The book makes you acquainted with some of these top-notch growers; shows pictures of their strawberry fields and gives their yields. This Book for your address. We'll trade even.
R. M. KELLOGG COMPANY, Box 325, Three Rivers, Mich.

RHODE ISLAND REDS

Practical fowls! The man who breeds for business will find them prolific egg-producers in all seasons—hence money-getters. Unsurpassed for table use, weighing from 5 to 8½ pounds; plump tender, commence laying early; are splendid sitters. This remarkably hardy strain requires comparatively slight care and attention. Can be had with Rose or Single Comb. Send for my free, illustrated Catalogue; tells all about the Reds—their remarkable origin, their exceptional possibilities in point of profit. You will be interested.

Other Good Birds

My Barred Rocks are of the Sisson strain. None finer. Some of these birds scored the highest that a Barred Rock ever did—97 points. Am also prepared to supply White, Buff and Black Rocks, White and Columbian Wyandottes, White and Buff Leghorns, Black Javas, Light Brahmas, Pekin Ducks.

Don't Miss My New Book on Reds

Absolutely the finest work of its kind. Your's for 20 cents in silver. Would be cheap at fifty. Amount credited on purchase of "Eggs to Hatch." Handsomely illustrated; tells all you need to know about complete care of chickens. Edition limited, don't delay.

WHITE ROCKS : OWEN

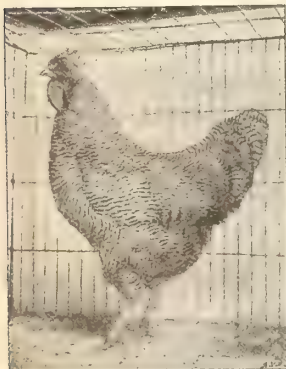

1st N. Y., 1904 and 1906. Old Champion.

1st New York, 1907.

1st New York, 1907.

1st N. Y., 1904. Ben Hur III.

What We Have to Sell Now

WHITE ROCKS

This is the time for you to strengthen your breeding pens, and undoubtedly an opportune time for you to do it. We have now some grand good cock birds and hens in White Rocks that we are not using in our breeding pens, which we can sell to you at right prices, and which have quality that will please you and do you good service.

If there ever was a time when we could say properly DO IT NOW it is in regard to these birds, which we WANT to sell, and you WANT to breed. Our blood means Type and Color, and great increase of your chances in the Fall Shows.

COCKERELS and PULLETS we have in plenty, and can fill your requirements at right prices. Time is a great object now. You may safely send us the sum of money which you wish to pay for what you want. We will send THE BEST WE CAN for it, and it will be subject to your satisfaction. If it is not, we will return you your money the day the birds arrive back. Tell us just what kind of White Plymouth Rock you want. If we do not KNOW that we have it, we will not send a bird, but will return your money.

WHITE ROCK EGGS FOR HATCHING

Send for our 1909 Mating List. We do not state the price here, because we do not sell "Just Eggs." We sell THE EGGS from certain well described males and females, and the prices vary according to the quality of the birds. Our Mating List gives the prices in full.

WHITE WYANDOTTES

Of Cock birds and Hens we have only a very few to offer; but these few are choice, and you ought to inquire about them at once if you are wanting them, as the prices will be right for the birds.

COCKERELS, however, we have in plenty, white as snow, grand in type, good heads, and as sure to breed winners as it is sure that they are this moment fit to win anywhere. VIGOROUS? Well, that is one reason why we WISH to sell them. Each one imagines that he is the Champion heavy weight of America. Seriously, too much cannot be said for these Cockerels. Do not hesitate to send \$10, \$15 or \$25 for the best bird we can send for the money. We will take ALL the chances. You need take none. We will guarantee to satisfy you.

AND PULLETS—A few only we can spare; but they are choice—perfect ideals of what a Wyandotte female should be. This will tell you something: Not a single Pullet at less than \$7.50.

ENTHUSIASTIC? Yes we are, and so is everyone to whom we have sent our White Wyandottes this year.

WHITE WYANDOTTE EGGS FOR HATCHING

Send for our 1909 MATING LIST.

BUFF ORPINGTONS

Here we have everything that you want: Cocks, Hens, Cockerels and Pullets, and plenty of them, and of all degrees of quality and price. If you want breeding helpers, we will be PROMPT and answer your correspondence at once, and make shipments without delay, so that you can get the full value of your purchase.

Bufs require a lot of breeding to get good type, good color, strong under color, and to be free from disqualifications. It has taken years to attain our present perfection. We can surely save you years of time, trouble and expense in getting results in this variety. If we were talking to you, we should repeat and say, "Really we can."

Get this year some Owen Farm's blood in your Bufs. We were asked last Fall to go two hundred miles to inspect a flock of eighty Buff Orpingtons. We picked out seventeen birds for the next year's breeding. The owner said, "How did you do it? All of those you have picked out are pure Owen Farms' blood. The others are another strain. How did you know?" We said, "A small portion of the head was enough. Do you notice the beak? It is of far better shape, and white and of good color. The other birds all have slightly crooked bills, which are almost red in color." Let us start you or help you if you have started wrong.

BUFF ORPINGTON EGGS FOR HATCHING

See our 1909 MATING LIST for the twenty-four best mated Buff Orpington Pens in this country. Prices according to quality.

BARRED ROCKS

The grand Gardner & Dunning flock added to our own birds put us in a position to supply you with anything you may need in Barred Rocks. As an all round flock there is no better in the World.

There are two things that place our flock on a plane of its own. These two things you need in your own flock. They are, first, perfect health and vigor, and, second, perfect shape and size. These two things are absolutely necessary in all flocks, and absolutely lacking in most of them.

We have narrow clean barring to the skin on all our birds of both cockerel and pullet lines. We can help the shape in any flock, and the color in all but one or two.

We have several grand cocks from both lines that are fit to head your best pens. In hens we can spare forty grand good selected birds that will throw winning chicks, as we can mate them. Two hundred of the finest cockerels and pullets ever sold are yours, if you want them.

All have fiery red eyes, excellent combs, narrow snappy barring, all the vigor in the World, and the type that has made this strain pre-eminent wherever shown.

Wm. Barry Owen, Prop.
Maurice F. Delano, Mgr.

: Always Address Owen Farms, Vineyard Haven, Mass.

FARMS: BAR'D ROCKS

About Barred Plymouth Rocks

Owen Farm has been quietly breeding Barred Rocks for five years, and we have been improving steadily all the time. When our Mr. Delano joined us he brought with him both a wonderful experience in breeding this sterling variety, and some grand breeding birds. At the World's Fair in St. Louis, in hot competition, he had won the 2nd Collection. During all of these years, however, we would not show our birds, because until we could be a leader or among the leaders in this variety we did not wish to make a move.

Year after year we lived in "Barred Rock Alley" at the Madison Square Show, studying and watching the progress made: Who had the BEST FLOCK? Who was showing and breeding the best males and females? Who had the best SHAPE? Who clearly indicated by their breeding and birds shown, in combination with this grand shape, even barring, narrow with perfectly tipped feathers, and with color that was bright and snappy, that they were entitled to the FIRST HONORS?

Our answer was, "Gardner & Dunning, of Auburn, New York." The last three years that they have exhibited they have won the *SHAPE SPECIAL* each time. In the last ten years there have been at Madison Square fifty Firsts (five each year) and fifty Seconds. Gardner & Dunning have won of these Firsts and Seconds TWENTY-THREE. Think of it! Twenty-three per cent of all Firsts and Seconds—honor enough, was it not?

On February 6th, 1909, Owen Farms purchased this whole business of Gardner & Dunning—their entire flock of six hundred birds, which we firmly believe to be the best flock of Barred Plymouth Rocks in this country. We also purchased their good will and business.

We cordially ask all of their friends and patrons to give us their orders and support.

To all fanciers of Barred Plymouth Rocks we respectfully announce that we have prepared a special Mating List of Barred Rocks, which is "yours for the asking." In it you will find set out what our flock really represents.

We can furnish you with old and young stock or eggs, and in the same reliable manner employed by us in dealing with our customers in our other varieties. We solicit your inquiries.

Lastly, we wish to tell you that when we took over this grand flock and business, Mr. Newton Cosh, than whom there is no more able breeder and judge of Barred Rocks in this country or Canada, joined Owen Farms as Assistant Manager, and will especially devote himself to this magnificent flock, which, during the last year, he has mated and cared for, and for the grand success of which at Madison Square Garden he has been responsible.

We invite you again to inquire all about our Barred Rocks.

This Year

Note the marvelous winnings this year: New York State Fair, Cock, first, second and third; Hen, first, second and third; Cockerel, first, second and third; Pullet, first, second, third and fourth; Pen (old) first and third; Pen (young) second and third; and at Madison Square, New York, Cock, third and fifth; Hen, second; Cockerel, eighth; Pullet, first; Pen, fifth and seventh. NOTICE in all FIFTEEN birds among the New York winners.

YOU NEED THIS POULTRY BOOK

One of the ten famous Biggie Books—a priceless treasury of useful facts for poultry raisers, crammed with money-making information. You can have it by sending \$1.00, for which you will also receive a five years' subscription to the Farm Journal—America's most helpful farm paper. Write and ask us how we give the other nine books in the Biggie Farm Library entirely free.

FARM JOURNAL

1308 Race Street, Philadelphia, Pa.

SCARFF'S RASPBERRIES

Splendid growers: big luscious fellows: hardy stock, healthy. Money makers. Conquer your land to earn higher profits. Book on "Transplanting free with each order." "Scarff's Bearing strains" of small fruits make \$300 per acre. One small fruit plant given with free Catalog G (if you ask for it). W. N. Scarff, New Carlisle, Ohio

I WANT YOU

to get my new, handsome winter of 1908 showing

HUNDREDS OF LATEST STYLES

with illustrated lessons on Cutting and Dress-making, FREE, and I will sell you all the patterns you want for five cts. each. They are the same patterns you have always paid 10c & 15c for at the stores, made by the same people, and correct in every detail.

I publish the FARMER'S CALL, a weekly paper for every member of the family. An especially interesting feature each week are the children's letters; and the Woman's Department is unusually strong and instructive. Among the special features for women folks is its fashions in which I show the 5c patterns. Let me help you to save money.

MY SPECIAL OFFER

Send me 25c and I will send you the Farmer's Call every week for one year (about 1000 pages) and will send my big Fashion Book to you free. I also agree to sell you any pattern you want thereafter for 5c. I can send you 5 cts. because I buy them by the thousand and don't make any profit. I don't want any profit. I want your subscription to the FARMER'S CALL. You will save many times the cost of my offer in a year. WRITE TO-DAY.

You can use this coupon—cut it out now and mail to me with 25c—1c and 2c stamps taken, but a quarter almost always goes safe:

JOHN M. STAHL—Enclosed 25c for Farmer's Call for one year, your book of patterns, postpaid, and privilege of buying patterns at 5c each.

Name.....

P. O.....

State.....

Very Special Offer

Send me 50c and I will send you the Farmer's Call for one year, the Illinois Farmer for two years, the Fashion Book prepaid, with privilege of buying patterns at 5c each. Use above coupon, but enclose 50c and write I, F. in the corner. Cut out the coupon right now, fill out, and send to

JOHN M. STAHL, J. P. Sta., Chicago, Ill.

Flower Offers

Without Cost to You

Five Beautiful Roses (Order as No. 101)

Many of these roses when in bloom sell for \$4.00 to \$6.00 per dozen at a florist's. You get all these five varieties—Climbing Meteor, bright red, yellow Rambler, bright pink, pure white.

Four Elegant Ferns (Order as No. 104)

This collection consists of the leading varieties—Boston, Emerald, Fountain, Asparagus. These varieties frequently sell for 50 cents each.

Five Fragrant Carnations (Order as No. 109)

The carnation was President McKinley's favorite flower. This collection contains five different colors—one rich scarlet, one deep pink, one light pink, one white, one white striped with scarlet.

Six Magnificent Chrysanthemums (Order as No. 102)

We will send in this collection six of the large, showery Japanese varieties, as follows—one pure white, one deep yellow, one light yellow, one light pink, one deep pink, one beautiful red.

OUR OFFERS

No. 1—Send us only 35 cents and we will send you FARM AND FIRESIDE for the rest of 1909—20 numbers—and any one collection of flowers above, prepaid.

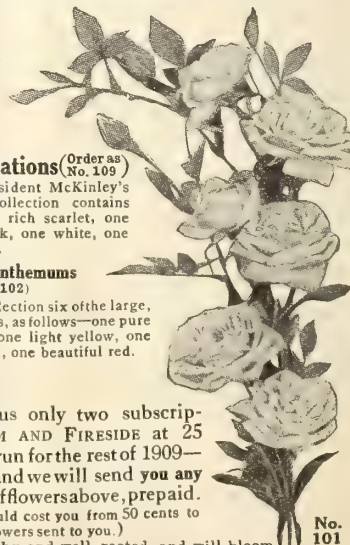

These collections if purchased from a flower dealer at retail would cost you from 50 cents to \$1.00 each. (Be sure to state which month you will want your flowers sent to you.)

Our Guarantee—

These plants will be large, healthy and well rooted, and will bloom this season of 1909. They are exactly as described or money refunded.

Farm and Fireside comes twice a month, and stops when your time is up. It is for the farmer and his whole family. There is no other farm paper quite as interesting, helpful or valuable. FARM AND FIRESIDE prints and circulates each month more copies than any other farm paper. That shows how well it is liked!

Send your order promptly to FARM AND FIRESIDE, Dept. D, Springfield, Ohio

No. 101

WHITE ORPINGTONS

HAVE ADVANCED

There was no single variety which made a finer display than this splendid collection of Snow White Fowls, admirably staged and exhibited to full advantage. The highest priced birds sold were Orpingtons.

Table Showing Approximately the Total Number of Fowls of Principal Breeds at the Crystal Palace Show, for the Past Three Years:

Petersen's Houdans

Reign Supreme at the Nation's Greatest Shows

My record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited. I won 1st cock, 1st and 2d pullet.
BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.
BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.
BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets; \$100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

BOSTON, 1906. Judged the Houdan Exhibit.
ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdans. Also highest honors at **Madison Square Garden, Philadelphia, Pan-American, Hagerstown, Toronto.** No matter where you want to exhibit, no matter what the competition, I can furnish the winners. We do not exhibit at state fairs and smaller shows, nor enter into competition with our customers. Write for particulars.

The Only Incubator Company that Doubled Its Business in 1908.

The Incubator YOU Want is the One that Hatches the Most "Livable" Chicks

It makes no particular difference to you on what principles a machine hatches—**BUT**

It does make a big difference *to you* how many "livable" chicks you get from each hatch.

Those who have had experience with incubators know too well that the common trouble and serious disadvantage of all incubators is the great number of chicks that die in the shell and soon after being hatched.

What you and every other buyer of an incubator wants is a machine that hatches *chicks that live*.

When we tell you *we have that incubator the one you want*—one that, without any "fuss" or bother, *hatches chicks that live* and the most of them. We don't base our claim on *theory* or guesswork, but instead, on actual, practical results *already* obtained by those who are operating

**Read
The
Proof Below**

12,000 ^{Big} Strong Chicks

Were hatched by me in Prairie State Incubators during April, May and June, this year. The hatches averaged better than 90 per cent. and went as high as 98 per cent. These chicks were shipped as far as 2,000 miles with only seven reported dead in the whole 12,000. How is that for vigor?

LEON L. HOUGH.

Canisteo, N. Y.

Prairie State Incubators

For instance, read Mr. Leon L. Hough's letter. Think of it! When but 7 newly hatched chicks died out of 12,000—and most of them were shipped 2,000 miles—it goes without saying that they are **strong, vigorously hatched chicks—chicks that live** because hatched right.

Now read the other letters.

Don't you think they prove conclusively that the Prairie State is the incubator you want?

They certainly **prove** it is the machine that hatches **chicks that live** and the most of them.

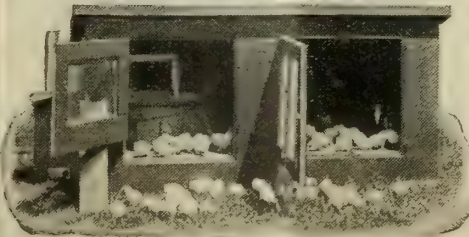

Then why take chances on others?

Prairie State Brooders

and Colony Houses have been made along the same practical lines as the Prairie State Incubator. They have been improved each year and are now without doubt the most satisfactory brooders on the market. The reason for this is that they furnish the little chicks varying temperatures best suited to the individual. Those that want more heat can get it—those that want less can find it and plenty of room for exercise.

Our new catalogue is just off the press, and you will find it one of the most practical and helpful books on artificial incubation. It also fully describes the principles on which Prairie State machines are made clearly and concisely. When you have read how we overcome the heavy loss both from "dead-in-the-shell" and "white diarrhoea" we believe you will not be satisfied to buy any other machine. Write for copy today.

Prairie State Incubator Co.,
468 Main St., Homer City, Pa.

Prairie State Incubator Co., Homer City, Pa.

Gentlemen:—Last winter I purchased one of your 400-egg incubators and have run it alongside of two other makes. With the same care and eggs from same pens I find that it not only hatches more chicks but they are **larger and much more vigorous**. I have about 3000 small chicks on hand now and think that I can go through the lot and pick out every Prairie State hatched chick. I will give you the results of my last hatch. Placed in the machine 365 eggs, tested out 55, hatched 279 strong, healthy chicks. At eight days old, everyone is living. That is certainly good enough proof that your machines hatch chicks that live and lots of them. Yours truly,
W. J. TILLEY, Mgr.

MORE LIVING ACTUAL PROOF

Wells Beach, Me., June 16, 1908.
Prairie State Incubator Co.,
Homer City, Pa.

Gentlemen:—The two Prairie State Incubators bought from you last winter I used side by side with two other standard makes. The results were without exception in favor of the Prairie State. But what impressed me most, was not so much the larger percentage of chicks always hatched in your incubators, as the much greater weight, size and vigor of the chicks. Had I not known the facts it would have been difficult to convince me that the chicks hatched in the different machines were not from different stock. Those hatched in your incubator being plump and heavy as if they had been well fed, while those from the other incubators were light and, in comparison, seemed dried up. The cause of this I consider due to your solution of the persistent question, as it was even more noticeable as the season advanced, evidently when there was less moisture in the outside air. I want to congratulate you on the splendid incubator you have turned out. Very truly yours,
L. J. MALONE.

Pine Bluff, Ark., Sept. 14, 1908.
Blanke & Hauk Supply Co.,
St. Louis, Mo.

Gentlemen:—The Prairie State Incubator that I purchased of you in the spring does fine work. I have never had any experience with one before, yet I took off 3 hatches all over 80 percent of the fertile eggs. It not only hatches big percent, but it hatches big, strong, lively chicks, the kind that live and grow right from the start. I will need another before long. Respectfully yours,
(Signed) A. P. RYLAND,
"The Chicken Man."

Edgewood Poultry Farm,
Packerville, Conn., June 15, '08.
Prairie State Incubator Co., Homer City, Pa.

Gentlemen:—Last winter I purchased one of your 400-egg incubators and have run it alongside of two other makes. With the same care and eggs from same pens I find that it not only hatches more chicks but they are **larger and much more vigorous**. I have about 3000 small chicks on hand now and think that I can go through the lot and pick out every Prairie State hatched chick. I will give you the results of my last hatch. Placed in the machine 365 eggs, tested out 55, hatched 279 strong, healthy chicks. At eight days old, everyone is living. W. J. TILLEY, Mgr.

Oakham, Mass., June 23, 1908.
Prairie State Incubator Co.,
Homer City, Pa.

Dear Sirs:—I like the Prairie State machine I bought very much. Of the 3 hatches I averaged 85 percent or better, and no cripples or weak chicks. The chicks were **larger and stronger** than those hatched in another machine without sand trays. Lost none by sickness. Sold about 300 in all this spring, and as far as I have heard the parties are well pleased with their chicks. I find I can run the machine on 1/2 the oil it takes to run any other hot air machine. I never had such big strong, hardy chicks as I got this year from the Prairie State. I am perfectly satisfied with the work it does. Yours truly,
MRS. M. W. EDSON.

Le Roy, N. Y., Aug. 13, 1908.
Prairie State Incubator Co.,
Homer City, Pa.

Gentlemen:—Two years ago I purchased one of your 400-egg incubators, also a Universal Hover. In the two years' experience I find no other make of machine to compare with it for hatching good strong chicks. I appreciate this fact all the more because I can bring the chicks through the fatal period without loss, whereas my neighbors (who have other makes of incubators) cannot do so without entailing a great loss. I installed your Hover in a piano box, which makes a very satisfactory Brooder. Your Incubators and Brooders are the real thing, and anybody contemplating to buy will not make a mistake if they purchase a Prairie State incubator and brooder from you. Yours truly,
WM. E. DESPARD.

Orchard Hill Farm,
Brookfield, Wis., July 18, 1908.
Hankle Seed Store.

327 Chestnut St., Milwaukee, Wis.
Dear Sirs:—The Prairie State Sand Tray Incubators I purchased of you are the finest hatching incubators I ever run. I found the chicks hatched in them lived better, were stronger, more vigorous and full feathered than those I hatched in the—. The Sand Tray solves the moisture problem. I got larger hatches and less dead chicks in the shell. I have traded off my other incubators and installed the Prairie State. By using them I get more and better chicks. With best wishes I remain, Very truly yours,
A. E. WILLIAMS.

Bred in Line for 17 Years!

Can any other White Rock breeder say as much? Then when buying eggs for hatching, why not place your order where you know you will secure quality and blood lines no other breeder can offer you?

U. R. Fishel's White Plymouth Rocks

are conceded everywhere to be the most beautiful and profitable of all fowls. As prize winners there are none to compare with them, while as egg producers, well, the other fellow that gets his birds to lay three eggs a day, has us beat. We are offering

EGGS FOR HATCHING

this season that have more quality than ever before. Our matings are the best we ever owned, but our prices are the same. \$8.00 per 15, \$15.00 per 30 and \$25.00 per 60. Sale stock eggs \$10.00 per 100.

Send two dimes for 56-page catalog, the most instructive poultry catalog ever issued.

U. R. FISHEL
Box A - Hope, Indiana

What Others Say

That Have Bought Eggs from U. R. Fishel

MARYLAND, Sept. 2, '08.

DEAR SIR: I bought ten eggs from you last March, one being broken when received. I hatched eight out of the nine remaining eggs and raised them all. I had them on exhibition at our local show and won first prize on the pen in strong competition. Yours respectfully,
J. E. WALKER.

ONTARIO, May 19, '08.

DEAR SIR: I got ten extra strong chickens out of the fourteen eggs, the hen having broke one. I consider this a fine hatch, considering the eggs were shipped a long distance. Yours respectfully,

GORDON WILSON.

PENNSYLVANIA, March 17, '08.

DEAR SIR: Please let me know what you would sell eggs for for hatching from your very best birds. I had decided to keep more Barred Plymouth Rocks than White Rocks until the three pullets that I raised from the setting of eggs they began to lay, and up until last Saturday these three pullets laid eight more eggs than eight Barred Plymouth Rock hens. This has convinced me that White Plymouth Rocks are the fowls to keep. Respectfully,
KENNETH WIGHTMAN.

OKLAHOMA, May 18, '08.

DEAR SIR: Received eggs in good shape. Hatched fourteen out of the fifteen eggs. They are doing fine. Are all hearty and strong.
A. E. ALWOOD.

NEW HAMPSHIRE, Jan. 20, '08.

DEAR SIR: From the stock eggs bought of you last season I have thirty-two nice chickens. I sold twelve cockerels for \$1 and have eighteen nice pullets left. They were hatched the last days of April and began laying the 10th of November and have laid every day since.
JOHN CURRIER.

MISSISSIPPI, April 13, '08.

DEAR SIR: It is with pleasure that I write to tell you of the hatch from the eggs you sent me. The day after I set the hens she broke one of the eggs, leaving fourteen. Am glad to be able to tell you that all the eggs hatched and I now have fourteen chickens. Yours respectfully,
HENRY S. CLARK.

TEXAS, April 15, '08.

DEAR SIR: It is with pleasure that I again write and tell you the results with my eggs which I purchased from you. I purchased fifty eggs and out of the lot I secured four dozen chickens, which is to my mind quite a good hatch considering that the eggs were shipped over one thousand miles.
C. M. GALEY.

INDIANA, Oct. 20, '08.

DEAR SIR: In an egg laying contest being held here a Fishel pullet made a record of two hundred and eleven eggs in nine months. Yours respectfully,
B. L. TATE.

IOWA, April 10, '08.

DEAR SIR: I thought perhaps you would like to know how my eggs hatched. I got fourteen chickens out of the fifteen eggs you sent me.
F. H. HOLLOWAY.

IDAHO, April 22, '08.

DEAR SIR: It is a pleasure to report a hatch of eleven chickens out of thirteen eggs left of the fifteen sent me.
H. E. KING.

MINNESOTA, Jan. 15, '09.

DEAR SIR: I must write you and tell you of the wonderful pullet I got from the eggs I got from you last spring. I raised six pullets and one cockerel and all score from 93½ to 96 points. I just won at our home show the silver cup for highest Plymouth Rock pullet in the show in strong competition, also special for pen. I want another setting of eggs from you in the spring. Yours respectfully,
MRS. JENS OLAFSON.

PENNSYLVANIA, Dec. 21, '08.

DEAR SIR: From the \$8 setting of eggs I hatched thirteen chickens and raised every one of them. I picked out one pen and showed them here at the show, which was one of the largest shows ever held in this part of the country. I was in a class of near one hundred birds. There were five pens and I took second pen. I lost first on the cockerel's comb being a little large. The boys said around the show I had the best pullets they ever saw. Respectfully,
JOHN W. PETERSON.

SOUTH CAROLINA, April 9, '08.

DEAR SIR: From the setting of eggs bought from you some few weeks ago the hen broke two, leaving me thirteen eggs. I have eleven chickens; one chicken dead in the shell. This I consider a very good hatch and speaks well of the fertility of your breeding pens—twelve fertile eggs out of possible thirteen.
H. W. REENSTJERNA.

WEST VIRGINIA, Jan. 25, '09.

DEAR SIR: With chickens hatched from your eggs I won first pen, first and third pullet. I surely got good results from your eggs. Yours very truly,
V. E. SMITH.

MICHIGAN, Feb. 11, '08.

DEAR SIR: I bought one setting of eggs from you in June, hatched thirteen chickens and raised eleven. At the Hasting's Poultry Show I won second pullet, scoring 95¾. Tied cockerel for first, but lost on draw, score 94¾.
J. E. BROWN.

KENTUCKY, Jan. 29, '09.

DEAR SIR: If you remember I purchased a setting of your best White Rock eggs last spring, and I think I mentioned that I wanted to raise some for show, which I did. Exhibited and won first cockerel, 93¾; first pullet, score 94; second pullet, 93¾; four pullets, 91¾. Respectfully,
MRS. MAE LYNN.

You can do even better than this if you buy eggs of us this season as our matings are the BEST we ever owned

U. R. Fishel, Box A, Hope, Ind.

Lee-Smith's Single Comb Rhode Island Reds

Strain vigorous, healthy and great layers.

Grow Grapes for Profit

Poultrymen, there's money in grapes. It's not much trouble to grow them. Plant them alongside the chicken houses and yard fences. The vines make excellent shade for the poultry yard, and the richness of the land will assure a large yield. We offer

10 Strong, hardy Grapevines, \$1.00
Two-year-old

Sent postpaid. Best varieties—red, white, black.
Or we will send

5 Three-Year-Old Vines for \$1.00

These will bear the year after planting. Order now; vines will be sent proper time to plant.

With every order we send our valuable book how to plant, cultivate and prune. Grapes are easily grown and should be in every garden.

THE OLD HEN CAN HATCH AS WELL AS THE PHILLIPS UTILITY INCUBATOR

She can hatch perfectly, but how often does she do it? Doesn't she unusually have unfavorable conditions to contend with and consequently fail 20 to 40 per cent, short of the perfect hatch she is capable of? The Phillips Utility Incubator is proof against the difficulties the poor old hen has almost always to contend with, consequently its hatches are uniformly excellent. Don't take my word for it without proof. Buy one of the machines with a thirty day unconditional return privilege and if it does not uphold every claim I make for it, send it back and I will return your money right off the reel without any back talk. **My Five Years' Guarantee** of a hatching efficiency of 85 per cent or better protects you fully after the thirty days expire. 56-egg \$6.00, 120-egg \$10.00, and 240-egg \$16.50. I also manufacture the famous **Defiance Incubators**, the best cheap hatcher made. Strong guarantee, liberal trial offer. 50-egg \$3.48, 100-egg \$4.95 and 200-egg \$7.90. More agents wanted. Catalogue free. **GEO. PHILLIPS INCUBATOR WORKS, Geo. Phillips, Prop., Box 3301, Ridgewood, N. J.**

Tom Watson's Periodicals are Read by All Intelligent People

The Weekly Jeffersonian

Price \$1.00 per year

Watson's Jeffersonian Magazine

Price \$1.50 per year

BOTH TOGETHER, \$2.00 PER YEAR

While these have the same purpose, they are wholly different in make-up. They make a specialty of explaining and advocating true Jeffersonian principles, but they contain choice stories, serials and general literature to interest every member of the family circle.

At this time, when a Presidential campaign is opening, and all citizens are keenly interested in governmental questions, no one should be without the Jeffersonian. Address

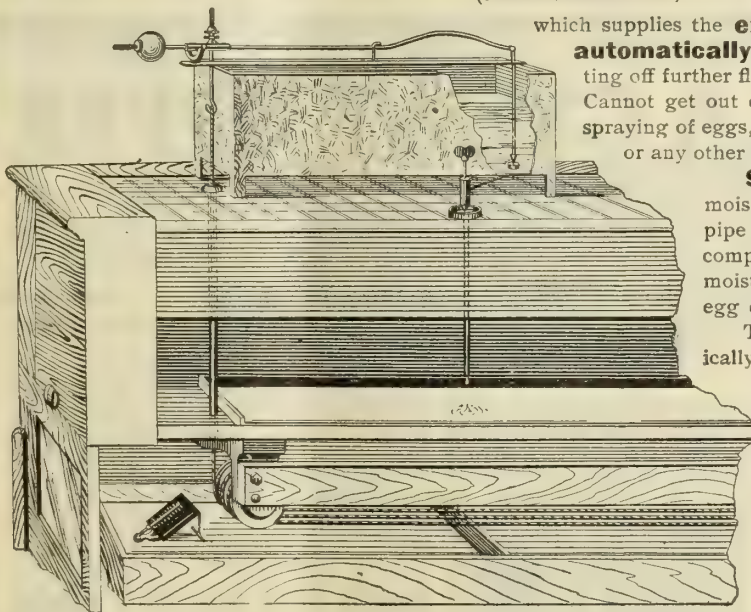

THOS. E. WATSON

THOMSON, GEORGIA

Supplied Moisture is recognized by incubator operators as beneficial in some localities, and necessary under certain definite conditions. The problem is to supply moisture only when needed, to supply the correct amount, and to keep the moisture (humidity) under absolute control. Too much moisture or too dry atmosphere means spoiled hatches. The range of proper moisture is within narrow limits. You can secure these results perfectly now for the first time, and only by using

MODEL MOISTURE REGULATOR (Automatic)

which supplies the **exact** amount needed to a drop. Works **automatically**, adding moisture when needed; and shutting off further flow the instant proper humidity is attained. Cannot get out of order or fail to work. Does away with spraying of eggs, using damp cloths, moistened sand boxes, or any other **uncertain** method.

See the illustration. The humidifier, or moisture pan being located directly under the pipe that brings heated air into the distributing compartment above the hatching chamber, moistens evenly the fresh air as it enters the egg chamber.

The chief feature of the Regulator is a chemically treated cord connected with and operating a pivoted arm and valve attached to a water vessel placed on the top of the incubator. When the air in the hatching chamber becomes too dry the cord expands, opening a valve which supplies additional moisture. When correct humidity is attained, as shown by the specially constructed hygrometer supplied with every Regulator, the moisture makes the cord contract, or shrink, shutting off further flow. The humidity is read the same

as on a thermometer scale. In general, the working of this Moisture Regulator is upon the same principles as our famous Model Thermostat. This new device and others put the Model years ahead of all other incubators.

Other Patented Features for the Model Incubators are:—

Model patented Flame Extinguisher (new this year) a practical device which absolutely prevents continued smoking or any over-heating of the burner and oil. This Flame Extinguisher is a part of the regular equipment of our 1909 Model Incubator.

MODEL INCUBATORS

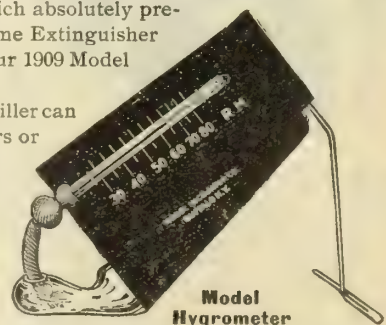

Durable in construction they will work well for years. Perfect in workmanship, simple and automatic—these are the results of my aim to build the most efficient hatcher ever made.

MODEL BROODERS

Early hatches must be raised in Brooders. The Model embodies distinct departments in the heating and ventilating system, and thousands who bought Model Brooders last season reported that they raised more birds in them than they were ever able to raise before. This record of accomplishment is the best test. Send for literature and proofs.

Model patented Automatic Lamp Filler can be attached to one or several incubators or brooders and will keep the oil fountain filled to uniform height. A great time and labor saver.

Send for Model Incubator booklet describing these and other Chas. A. Cyphers successful inventions, including a full line of Model Incubators and Brooders. You cannot afford not to know about these record making machines.

A GREAT OFFER

Two Leading Publications a Whole Year and a Beautiful Colored Picture all for the Price of One

WE have perfected arrangements whereby we can send the best and most practical farm and family paper published, **FARM AND HOME**, in connection with our own publication, on the remarkable terms as given below.

Semi-Monthly
National

FARM AND HOME

24 Numbers
Over 600 Pages

We are unable to give but a brief description of Farm and Home, which is unequalled for variety and excellence. It is pure, bright and practical all the way through, teeming with all the latest and most reliable information that experience and science can supply. For village, suburban and rural residents it will be found well-nigh indispensable, meeting the requirements of the entire family. No better proof of its popularity can be offered than its enormous circulation, which extends into every state and territory, each number reaching over two million readers. Sample copy sent free on request.

"Washing Day"

FREE THIS COLORED PICTURE FREE

An extremely attractive picture, appealing forcibly to every lover of child life—and who does not enjoy watching such a scene of complete innocence and happiness as the artist has so carefully depicted in the painting? From an artistic standpoint as well, this picture makes a most favorable impression, with its dainty and beautiful colorings, its accuracy of detail and lifelike arrangement.

The above illustration, although greatly reduced in size, gives a fair idea of its appearance. This picture is made in the very popular panel shape, so desirable for narrow wall spaces and measures 12 x 20 inches in size. It is mounted on heavy lithographic paper with narrow white margin all around for framing, if desired.

OUR OFFER

American Poultry Journal, One Year 50c } Both For 60c
Farm and Home, One Year 50c } Only

As a special inducement for prompt replies to all who accept the above offer within thirty days, we will also send the picture above described without further charge. Address all orders to

American Poultry Journal Pub. Co., 113 So. Clinton St., Chicago, Ill.

TRADE **Tycos** MARK Thermometers

Poultrymen do not give enough attention to the thermometer in their incubators.

High-priced machines with all sorts of patented thermostats and other devices may insure an even temperature throughout a hatch, but it may not be the correct temperature.

An even but, **wrong** temperature, that is, too much heat in the egg-chamber or too little, will not secure successful hatches.

You cannot get the correct temperature unless you have a thermometer that tells the truth.

A lying thermometer in an incubator will kill your chicks.

Still, some men never give a serious thought to the trust-worthiness of the thermometers.

103 degrees is hatching temperature. You may heat your incubator up to 105 degrees for a short time, but 105 degrees throughout the hatch means dead chicks. Neither can you go lower than 100 degrees for any length of time and get live chicks.

* * *

Now, suppose your thermometer is a lying thermometer.

What if it says 103 degrees when it is really 105 or 106 degrees.

You set the regulator so that it will keep the egg-chamber at the wrong—the chicken-killing—temperature, and you watch that thermometer closely for three weeks, never letting the temperature vary more than a degree.

You think you have done your part of the work well, and you have, but the thermometer has been lying to you. Instead of the temperature being 103 degrees it was 106 or 107 degrees.

You have actually roasted your chickens alive.

* * *

It is easy for a thermometer to lie.

Look at the thermometer on your

front porch, or in your incubator.

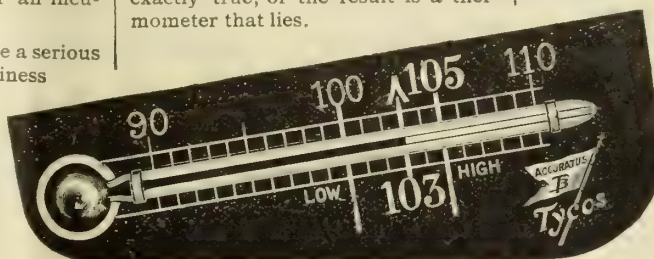

See that tiny column of mercury, not larger than a thread.

Yet small as it looks to you, you see it several times larger than it actually is.

The round glass tube is a very strong magnifying glass, and magnifies that column of mercury ten to fifteen times.

If you broke the glass tube of the thermometer, you would find the hole about the size of a human hair.

Yet this fine tube has to be made exactly true, or the result is a thermometer that lies.

They Tell You Correctly What The Temperature Is In Your Incubator, And You Will Not Kill The Eggs With Too Much Heat Or Too Little.

This is not the only way that thermometers lie.

The metal scale on which you read the temperature may lie.

There is only one way to make a truthful thermometer.

Each tube must be tested separately at several temperatures to determine its true scale and then a metal scale made and divided into degrees to agree exactly with the "test points" of its tube.

"Tycos" Thermometers are made in this accurate way by the Taylor Instrument Companies of Rochester, N. Y.

This company does not make lying thermometers at all. If a tube is broken after the metal scale is divided, the scale is thrown away with it.

Therefore, every "Tycos" thermometer tells the truth about temperature.

* * *

No man has ever been skillful enough to make two thermometer tubes exactly alike in every particular.

Therefore, a correct scale for one thermometer would be wrong for all the others.

Cheap thermometers have scales all stamped alike.

Do you wonder that your hatch failed if you used a thermometer made in this inaccurate way?

You can get a thermometer that tells the truth just as easily as one that lies, because we put the name "Tycos" on all our thermometers.

This trade mark signifies the genuine Taylor Instrument Companies thermometer. This trade mark

means that you have a dependable instrument—one seasoned, tested and absolutely truthful.

You did not know, did you, that a thermometer to tell the truth has to be seasoned? It does.

We have 200,000 "Tycos" incubator thermometer tubes carried in vaults undergoing a seasoning process.

Let us send you our little booklet, entitled "Thermometer Facts Worth Knowing."

Quite likely the information it gives you will enable you to get a successful hatch next time.

Let us suggest that if you are planning to buy an incubator you tell the manufacturer you want a "Tycos" thermometer with your machine.

The manufacturer of any good incubator ought to be glad to have you ask for a "Tycos," because he knows it is the thermometer that will give you the greatest success with his machine. Ask for a "Tycos." Insist upon it.

Taylor Instrument Companies Rochester, N. Y.

Greatest Combination Offer of Modern Times

By special arrangement with the publishers of Modern Priscilla, Pictorial Review and Ladies' World, we are enabled to offer these three high-class magazines with American Poultry Journal for one year for only \$1.35, and in addition give one Dress Pattern.

American Poultry Journal,	50c	\$2.65
Ladies' World - - -	50c	
Modern Priscilla - - -	50c	
Pictorial Review - - -	\$1.00	FOR
One Dress Pattern - - -	15c	\$1.35

If you purchased these magazines from your news dealer for one year the cost to you would be \$4.35. You will therefore be making a saving of \$3.00 if you send us your subscription now.

American Poultry Journal is the oldest poultry publication in America, and contains more valuable information for poultry raisers than any other poultry paper published in the world. In addition to this there will be five more of those handsome full-page colored plates of poultry inserted during the coming season, any one of which is worth more than the price of a year's subscription.

One of the special features of American Poultry Journal this season is the continued story of the Walling Family and their experience in the poultry business. Much valuable information for the amateur is given in this story. There will also be many new features added from time to time, which will always keep American Poultry Journal at the top.

Modern Priscilla is one of the best Embroidery Magazines published. It is the recognized leading Fancy Work Magazine of America. It is the undisputed authority on all kinds of embroidery, knitting, crocheting, lace, costumes, lingerie, and home decorations. It is filled from cover to cover each month with designs, instructions, descriptive articles, and valuable information. Aside from the strictly fancy work departments, there are departments devoted to China, oil and water color painting, stenciling, pyrography, leather work, basketry, and the like. It has many helps for housekeepers, and is a real good magazine for the home.

Pictorial Review readers appreciate the value of the up-to-date minute fashion service of that magazine. It has four foreign offices, managed by fashion experts, in Paris, London, Berlin, and Vienna. It keeps its readers in touch with what is newest and most smart in seasonable style. Pictorial Review is not solely a fashion magazine.

Its fiction is clever and interesting, its articles broad, and of national interest. Some of the regular departments and practical lessons in home dressmaking, millinery, crocheting, housekeeping, and household finance, sanitation, home decorating and furnishing, money-making suggestions for women, the care of children, a page for elderly people, wit, humor, and puzzles, echoes from the stage (illustrated), etc.

Ladies' World is recognized as one of the foremost Ladies' Household Magazines. It is bright, entertaining, wholesome, practical, carefully edited and thoroughly up-to-date. For 20 years it has been steadily improving in quality, and is unquestionably the cheapest high-grade domestic magazine published for women in this country. It is profusely and artistically illustrated and the handsome colored covers are changed with every issue. It contains from 36 to 44 large pages, size of Ladies' Home Journal. It gives more for the money than any publication in its class. It is a practical magazine for progressive women.

Remember, the price of this Combination is only \$1.35. Fill out your order today and send it to

THORNILEY'S MOTTLED ANCONAS

Bred for heavy winter egg production and standard requirements. I breed the one kind. My birds are constant layers and are money makers. I exhibited nearly one quarter of the Anconas exhibited under the A. P. A. rules last year and can give you show winners at living prices. My stock is of the very best blood lines in the world. Write for prices on stock and eggs. Circular and price list mailed free.

WILLARD J. THORNILEY, LIFE MEMBER OF A. P. A. - - - - Box 36, R. D. NO. 1, MARIETTA, OHIO.

Arnold's Columbian Wyandottes

ARE THE BEST ON THE FACE OF THE EARTH

The above statement is not true and we make no such claim. But listen! When the largest number of Columbian Wyandottes ever seen in one show were exhibited by twenty-two of the leading breeders in America at MADISON SQUARE GARDEN, NEW YORK. We won ONE-THIRD MORE POINTS AND FIVE TIMES AS MANY SPECIALS as our nearest competitors, winning fourteen specials and four silver cups including the CHAMPIONSHIP CUP FOR BEST COLLECTION and when it is true that this season at such shows as Madison Sq. Garden, Chicago and the leading Pacific Coast shows our customers are winning a large share of the blue and red ribbons and that the cockerel that won first and cup special at the largest and most important show in America this season was raised from eggs we sold. Then it seems that the statement at the head of this ad may not be far from the truth. We do claim that there is no breeder in America or the world that can show a better average lot of Columbians than we have in our matings this season. Some breeders have a few good birds to breed from and some have many. There is a difference, and it makes a difference to those who buy eggs and especially to those who buy in hundred lots. Send in orders early. We have a lot of fine birds for sale at right prices. Eggs from exhibition matings at \$5.00 per 15, \$9.00 per 30, \$12.00 per 45 and \$20.00 per 100. AUG. D. ARNOLD, Box 777, Dillsburg, Penna.

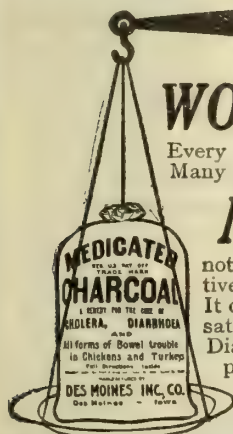

WORTH ITS WEIGHT IN CHICKS

Every poultry man knows that a large percentage of his chicks die from bowel troubles. Many know from actual experience that

MEDICATED CHARCOAL

not only prevents this trouble and saves thousands of chicks each year, but positively prevents or cures cholera, diarrhoea and kindred diseases in older fowls. It cleanses the bowels, purifies the blood, kills germs of disease. We guarantee satisfaction. It is the only remedy ever discovered for the cure of "White Diarrhoea." It is a scientifically prepared remedy in use on the largest poultry plants throughout the country. Guaranteed under Government Pure Food Laws. Trial bags, 10 lbs. \$1.00—25 lbs. \$2.25—50 lbs. \$4.25.

New Poultry Book

Origin and History of All Breeds of Poultry

WITH 198 BIRDS ILLUSTRATED IN COLORS

For years the needs and demand of poultrymen has been illustration of birds in natural colors. American Poultry Journal's new book "Origin and History of All Breeds of Poultry" furnishes illustrations in colors of all recognized varieties of chickens, turkeys, ducks and geese, both male and female.

The First Time

Never before in the history of the poultry business have all recognized varieties been pictured in colors and assembled in one harmonious uniform series of illustrations, perfect in shape, color, feather markings, uniform in size and correct in comparative proportion.

Origin and History

As time goes on and older breeders drop out the origin of different varieties is lost—their history obscure. In this book has been collected all the known reliable history, relating what cross matings produce present varieties and the names of the originators.

Mating of Breeds

The secrets of mating popular breeds are described, showing how success can be obtained in producing show winners, and the greatest possible results in egg productions.

The Book Described

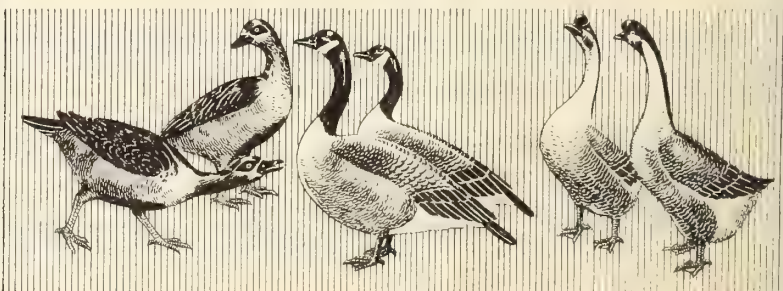

The book contains eighty pages and cover, size of page 9x12 inches. There are 198 colored illustrations of fowls, including male and female, of all recognized varieties of chickens, turkeys, ducks and geese, giving the origin and history and describing the best methods of mating to produce the desired results.

The illustrations were made by Mr. Samuel Stoltz who has proved by this work that he is the greatest all-round poultry artist in the world.

The articles are compiled from the writings of the best known, most successful breeders in the poultry business.

Introductory Price

Thousands of dollars and years of preparation have been put into this book. It is offered at the Bargain Introductory price of \$1.00 a copy, while in connection with one year's subscription to this paper it can be secured at a reduced price for the two as will be seen by the special offer below:

I've Come Here —for a March Word With You

I AM HERE to tell you this March day that thousands of farmers could make money by even renting the farm out and going partners with their wives in raising poultry. That thousands of renters have too much of their capital tied up in teams, tools and other things that are too expensive to maintain and that a less sum in the poultry business would bring them several times the profit. And I'll send you the Book and figures to prove it if you'll send me your name.

Also that there are thousands of wage earners who could bank their entire wages by helping and encouraging their partners in the poultry business, spare time too at that and the pleasures and health-giving exercise unlimited. No sir, there is no danger of the market being overdone. The catch of fish is now limited, wild game is nearly extinct and poultry is the best and only real substitute. Land is getting high priced, cattle and swine will never be cheap again. The cities are being congested with consumers of produce. The time may come that the producer may not be able to supply the demand no matter what the price. Large farms must be divided, intensive effort must replace extensive effort. Why wait? Why not get rich at it, get on the ground floor and make a moderate sum grow? You can do it in the poultry business. If you have no flock, start one; if you have a flock, increase the number. Give them better care, go partners with your wife, more money, easier work.

No Other Legitimate Business

or undertaking offers such an opportunity for a small investment, as poultry raising. I mean that from \$100.00 to \$500.00 can be made from a season's use of a good incubator and brooder and clear profits, too, at that. I've got over 100,000 customers who can verify my estimate. No matter the times or the price of feed, poultry raising is one of the very few opportunities to make money with a small capital. For years poultry raisers have been trying to supply the demand. Each year the prices make a gain. Two pounds of poultry can be produced for less than one pound of beef or pork, yet poultry brings twice as much on the market. From a

standpoint of egg production \$50.00 worth of hens will keep a man and his wife, \$100.00 worth of hens will keep a good sized family.

This For The Women Folks

A man can call hogs and whistle for the horses, but he is no good talking baby talk to little chicks. His patience and temperament are not built that way. It would work out a whole lot better if he turned some of the conveniences he would have for himself over to his wife. If he's going partners, he'd better be a silent, working one.

I'm aware that the men folks run the poultry shows and papers. They also run most of the poultry plants we find around the large cities, but it's Mrs. Farmer that makes the business put the figures on the right side of the account. It is she who raises the poultry, pays the grocery and dry goods bills that other farm product may be turned into profits—Think that over and you'll say it's so, Mr. Farmer.

Sent to You Promptly
On 40, 60 or 90 Days' Trial
10 Year Guarantee—75% Better Hatches Guaranteed

Old Trusty Incubators and Brooders

Old Trusty practically runs itself. Everybody knows that because over 100,000 are being used everywhere. But Old Trusty this year is better than ever—more convenient and more handsome. No charge for the improvements, although encasing Old Trusty in fire-proof metal costs me more than before when I just used the best California Redwood. Now I use the same California Redwood and the finely finished metal encasing too. Old Trusty is certain and sure. Simple and easy to run. "Stands without hitching" and "hatches without watching" like you have to do with some others. Remember, too, that I guarantee it for 10 years (Johnson's own guarantee) and guaranteed 75 per cent better hatches also.

Get My **1909 Book** Every Page a Poultry Lesson

My "big letter" is finished for 1909. That's what I always call my Big Free Poultry Book and Old Trusty Incubator Catalog. I wrote it myself, as ever, and took many of the new photograph, too. Over 200 pages this year, and over 1,200 pictures, most of them new, so you'll be bound to be interested, whether you got my last year's book or not.

Thousands of users of Old Trusties have written me again and sent in helpful advice to chicken raisers, and photographs of results of their big hatches and broods of broilers.

Now about price. Don't pay two prices. Don't fuss with experiments or new fangled improvements made to charge extra for. Look up the facts about Old Trusty which is way past the "experimental" stage these last six years and you can read why and all about me and my 100,000 customers and friends in my Free Poultry Book—before your order.

My price is going to be lower to you this year—Something below \$10 complete—freight paid east of the Rockies, and no worry about it.

Important Facts About White Ply. Rocks

First Cockerel at Boston, 1909

Fact 1. My White Rocks have won over 75 prizes at New York and Boston during the past five years, in competition with the best breeders in the land.

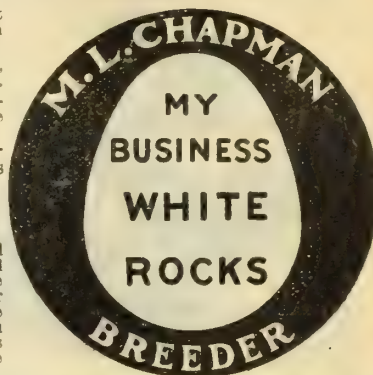

Fact 2. Many of these winners are now in my yards, including 1st ckl., Boston, 1909. I sell eggs from them.

Fact 3. Two pullets that I sold the Conn. Agricultural College laid 24 eggs each in Jan., 1909. These eggs tested a high percentage of fertility.

Fact 4. I ship all stock on approval and duplicate in fertile eggs free. I have a brief mating list that is short on adjectives but strong in facts. It's free.

SUGGESTION

If you are interested in White Rocks, do not be misled by indefinite claims and assurances of grand blood lines. Demand the facts. The above records are bonafide facts and cannot be surpassed by any other White Rock breeder in the world. If you are in the market for anything in White Rocks, let me quote you prices. I would like your business. Eggs from pens as they run, \$5 per setting. Order early to insure prompt delivery. Please mention A. P. J.

OUR BEST YEAR IN THE SHOW ROOM

Following our winnings at Sycrause, New York, and Hagerstown, Maryland, we won the following prizes at America's two largest shows on our Columbian Wyandottes:

CHICAGO, ILLINOIS—Cock, first and fourth; hen, first, fourth and fifth; pullet, second, fourth and fifth; cockerel, second and fourth; pen, first, third and fourth. Challenge cup for best display, with forty-two points!

MADISON SQUARE GARDEN, NEW YORK—Second cock, fifth hen and third pen. : : : : : : : : :

Really choice breeding stock and a few exhibition birds still left, but no low priced birds. Egg books in WHITE AND COLUMBIAN WYANDOTTES open. : :

Sunnybrook Farm, Box A. P., West Orange, N. J.

Young's Strain S. C. W. Leghorns

I HAVE NO OTHER BREED

I have won more prizes at Madison Square Garden, New York, in the last ten years than all others combined. My winnings at Madison Square Garden this year as follows:

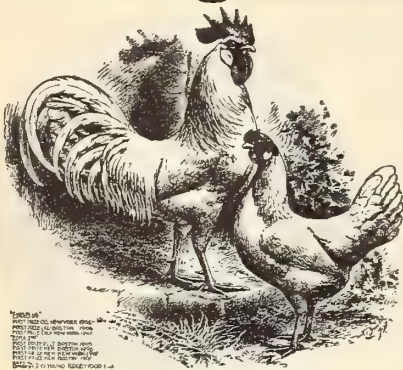

First, Second, Third and Fourth Cock
First, Second, Third and Fourth Hen
First, Second, Third and Fifth Cockerel
First, Second, Third and Fourth Pullet
First Pen
The President's Silver Cup and every special offered.

You cannot win without my strain. Every bird that won at Madison Square this year was directly from my yards, or from my strain, except one pen. They have been the leading winners for thirty years in America's greatest shows from the Atlantic to the Pacific Coast. It is the most prolific laying strain on earth and has been in hundreds of laying contests over the whole world and has not yet been defeated. Mating lists free. Stock and eggs for sale at all times. Crescent Poultry Farm, Frank Foy, Prop., Des Moines, Iowa

Foy's Big Book---Money in Poultry and Squabs

Describes and illustrates all the leading varieties of pure bred fowls and Homer Pigeons for squab raising. Tells you all about how to raise poultry for profit, how to feed and mate, all about diseases and remedies, and a great mass of useful information. Gives plans for building poultry houses, describes and illustrates the best incubators and brooders and the famous Crescent Poultry Farm, which is the largest poultry farm in this country devoted exclusively to the rearing of pure bred poultry and pigeons. Important Advice—Tells you how to start the business in a small way and grow big. My specialties are thoroughbred fowls of a high quality, and Homer Pigeons for raising squabs. I can supply eggs for hatching from all leading varieties by the single setting or in large lots for incubators. My prices are low. The quality is high. All who want to keep posted in the poultry business, or contemplate purchasing anything in the above line, should send for this book. Mailed to any address for 4c in stamps. Write your wants and mention A. P. J.

The Boston Poultry Show

**Thirteenth Annual Exhibition, As Large and As Good As the Best---Classes Well Balanced,
With Superb Quality the Feature---Mechanics' Building Grandly Decorated---
Increased Interest in Poultry Evident---Enormous Attendance---
The Banquet and Veteran's Day Notable Features**

Written for American Poultry Journal by H. P. Schwab, Irondequoit, New York

The thirteenth annual exhibit of the Boston Poultry Association will pass down as one of the best and grandest exhibitions ever held. Boston has done well in the past, its reputation is of the best, and this late exhibit stands out strong, with quality in every department. Classes well filled, and a balanced show in every respect. A harmonious blend of both quality and quantity, making the real beauty show.

Boston has the space and puts up a handsome show. The decorations are simply magnificent, to say the least. All the hundred or more display pens had from 5 to 6-foot evergreen trees wired to each corner, and you could well imagine yourself in a beautiful park in mid-summer, without half trying, surrounded by all varieties of pheasants, ducks, geese and rare game birds. To fully appreciate this display, it must be seen, as no words of mine can do it justice.

This year there was just about the usual number of entries in all departments, with several of the old favorite varieties showing stronger than for years past. While the American varieties again led in numbers, the Asiatic, English and Mediterranean classes were close up with many birds of exceptional quality.

The management was all that could be desired. Secretary Atherton was on the job early and late, and nothing was left undone. The wants of the birds as well as those of the exhibitors and attending public were carefully looked to and neither had the slightest cause for complaint. When we consider the magnitude of the Boston show, with close to 5,000 entries, containing over 6,000 specimens, and shown in nearly 1,500 classes, you then can just begin to realize the work that confronted Mr. Atherton.

The banquet on Tuesday evening was a notable affair. The exhibitors for years have looked forward to this with intense interest. It is Boston's way, and in this as well as in all other ways that came to our notice, Boston's way is all right. After enjoying all the good things provided, addresses were made by Messrs. Atherton, Welles, Fairbanks, Nichols and several others. Taking all in all, a most enjoyable evening was spent. Connecticut has always been long on orators. The silver-tongued Senator David Nichols has attained world-wide fame. Grand as he is, he will have to be reckoned with; his polished style won a quick and deep place with all. While he did not tell us just how to produce a "Fluffy Ruffles," he told other things that were interesting.

Veterans' day was a new departure, and a feature we would like to see at every show. With Secretary Atherton as guide, the veteran breeders filed through the show, admiring the birds, only in return to be admired by the attending throngs. Our estimable friend, Philander Williams, brought up the rear. Years fall lightly on Mr. Williams, and we hope he may be with us at the Boston show for many years to come.

Those We Met and Saw at the Show.

Pittsfield Poultry Farm Company made a grand showing of Barred Plymouth Rocks, their line all through showed exceptional quality, and if we were to mention any particular feature of this line it would be the head points on their males. The combs and strong eyes impressed us strongly, and it is evident that they rightly lay great stress on this important section. Their winnings in this strong class of eight regular and special prizes speaks well for them. Their fourth prize pullet was all that could be desired in style of barrings and shade of color; she will make a great hen. Had her wings and tail been fully developed, she no doubt would have gone higher up. Their third prize pen was very strong in females, well matched and headed by a great colored male. This line will have to be reckoned with at the future Boston shows. At the Portland show this year they made a record on Barred Rocks, winning first and second cocks, first and second cockerels, five places on hens and pullets and second pen. The prize of all prizes was awarded their first cockerel, viz.: the A. P. A. medal for being the best male at the show. Of course, he also won the medal for best cockerel in the American class; and fourteen other specials were awarded this line. Manager Briggs informed us that they had a very choice line of birds to sell, and that they could please the most critical. One of their specialties is the selling of day-old chicks. They guarantee safe delivery to any part. We have been favored with one of their handsome catalogues and would advise that all interested get one of these. We hope later to visit this farm and to then tell our readers more of it as seen by us. This baby chick business and an account of their Mammoth Incubator interests us greatly. (Note their advertisement and some illustrations in this issue.)

Charles Henry Welles was there, not with Ruffles this time, but just with the Duster, and placed the awards on Barred Rocks in a most satisfactory manner. Mr. Welles knows how to judge as well as how to breed choice ones, and has well earned the confidence of all who know him. At the annual meeting of the American Plymouth Rock Club Mr. Welles was elected president, an unsought honor, but well placed, and we predict he will make a popular officer. Mr. Arthur C. Smith was re-elected secretary, another good choice that we are pleased to commend. Mr. Smith has the interest as well as the ability, and we trust will receive the hearty support of every Barred Rock fancier.

Haldie Nicholson came down from Leominster with a wonderful cock and a line of cockerels that made things hum, winning second cock, first and second cockerel, also winning championship male with the first cockerel and taking away with him for final ownership the famous Lawson "Dream-old" cup.

C. H. Latham made nearly a clean sweep on females. This

is one of his old games, and his win was most deserving. This year Charlie held his breath at New York and made his one effort here, winning first, second, third and fourth on hens, and first, third, fifth and sixth on pullets and second on old hen. His birds show their usual rare quality and if we were to select any for special mention it would be the first and second hens that in form and shade of color were

WHITE PLYMOUTH ROCK.

First hen, Detroit State Show, 1909. Bred and owned by Lyman H. Hill, Station 3, Jackson, Mich.

choice, and the first pullet that was a wonder in markings.

Grove Hill Poultry Yards with their winnings at New York fresh in mind rested on those honors excepting in the pen classes. They entered but one pen of fowls and one of chicks and won first prize with each in strong classes, with pens properly mated and of the best quality. In S. C. Brown Leghorns they won four firsts and three seconds. We consider their first prize Leghorn cockerel the best that has ever

HOOSIER BOY.

First Partridge Plymouth Rock cockerel at Detroit and first at the late Cleveland show; is also a brother to the first Chicago cockerel. Heads our first pen. Melvot & Webster, Butler, Ind. See adv. on another page.

come to our notice. We paid a very hurried visit to these yards, but as we expect to go there again in the near future with plenty of time, we will then tell more of the Grove Hill yards and birds.

Mr. A. C. Hawkins only entered a cockerel mating display pen, headed by his champion first prize New York cockerel.

This pen was the center of attraction for all lovers of Barred Rocks. The cockerel stood up grandly and showed fully as well as he did at New York. His mates were all strong-bred females of good style and head points. Mr. Hawkins won first prize on a pen of Columbian Wyandotte, his entry for competition. He has made his reputation on this variety ere this and still grandly retains it against all comers. Mr. Hawkins reported to us as having a grand line of birds and fully able to supply the great demand made upon him for stock.

C. H. Shaylor, of Lee, Mass., was the dark horse in the race and caused many anxious moments in the breasts of all exhibitors in Barred Rock row. His second prize pullet was an ideal in both shape and color, while not fully finished in tail, otherwise a beauty in every respect. Her shade of color, as well as her style of bar, is all we could ask for. Her wing was handsome and her breast well filled and beautifully barred. His second prize pen of chicks contained four pullets equally matched and of the best of quality, clear, sharp barring and with exceptional wings. The male, while immature, was one of the best in the show. Another male of his won the Special for best surface color. Mr. Shaylor has won at Boston as well as at New York for years. His

"Honey Bee," value \$100. Golden Wyandotte cockerel. Bred by J. H. McDanell, Warsaw, Ky. Send for his handsomely illustrated catalogue, Golden and Columbian Wyandottes.

sweep at the New York State Fair three years ago is well remembered.

Whitecomb Farm came down with a choice collection of Barred Rocks and received good mention in nearly all classes. Their third cock was well placed in a class of cocks the equal of any ever shown. They also won third pen and several other places and specials. The quality of these birds is greatly improved since we saw them last, and we look to them for greater success in the near future.

The White Rock classes were exceptionally hot, several of the leading eastern breeders trying for conclusions, also one of the best known lines of the west was shown here with credit. L. C. Bonfoey made a good cleaning, winning first cock and champion male, first and second hens, first pullet and several other places. The first pullet was about the best we have seen; shown in the best possible condition, she had every quality desired. First hen was also close up in quality, a rare specimen, shown just right.

To M. L. Chapman fell the honor of winning first prize cockerel, and a beautiful specimen, shown at his best, he was as white as chalk, strong red eye and finished in detail. His second cock was close up and in grand condition, except-

ing his tail, that was not fully finished. Third hen and sixth pullet were worthy specimens in every way, and to cap the climax Mr. Chapman just ran off with the first prize on pen. This pen was without doubt the best conditioned pen at the show, and a great winner.

Lyman H. Hill, of Jackson, Mich., entered a full string of White Rocks and when we consider the distance they came, and the unavoidable loss of condition, his record surely is a phenomenal one. He won third cock, fourth hen, second cockerel and fourth pullet. He was also awarded the special for best-shaped male, and some others as well. His birds are very strong in shape all through, and we doubt if we have ever been called upon to place the awards on a stronger class of birds.

Buff Rocks were also on our books; here again was strong competition in every class and the largest class we have handled this year. M. J. Corey, Springfield, Mass., came in strong with his line, getting good mention all through. His first pen was a combination of rare quality in both shape

first hen, first and sixth cockerel, second and fourth pullet and first exhibition yard, along with a line of specials too numerous to mention. By winning three first prizes and good mention on every class in this competition is a record unequaled at the Boston show. Their first prize cockerel was the sensation of the class and the conceded champion. For shape, evenness of color and extra choice head points we doubt if his equal has ever been produced. First hen was also a good winner, with quality in her every line, her shade of color was superb to say the least. After the show we spent two days at the Owen Farms and will tell more of them in another article.

The Light Brahma classes were one of the features of the show, with a large entry in each, and with quality the equal of any we have seen, they deservedly received attention. Dark Brahmas and Partridge Cochins were also shown in good numbers and rare quality.

The Birds as We Saw Them.

Barred Plymouth Rocks. Cocks: First, a grand big fel-

KAUFMANN & WINDHEIM, NUTLEY, N. J.**

and color, the one shade of color on all. Besides this Mr. Corey won the two silver cups offered by the Buff Rock Club, one for state members and the other open to all from the eastern district. Mr. Corey has been breeding the Buffs for years, his record at this and former shows proving his line of merit conclusively.

Mr. Fred W. Cobb has bred poultry all his life, and Buff Rocks for several years with good success, we have seen this line before and have commended them. This was Mr. Cobb's first entry at Boston. His second cock was a prince in both shape and color, his tail was not fully developed. This cock also won the Color Special, an honor that can't be overestimated. Mr. Cobb also breeds Columbian Wyandottes. He reports stock sold closely; his matings for this season will be small, with only quality in view.

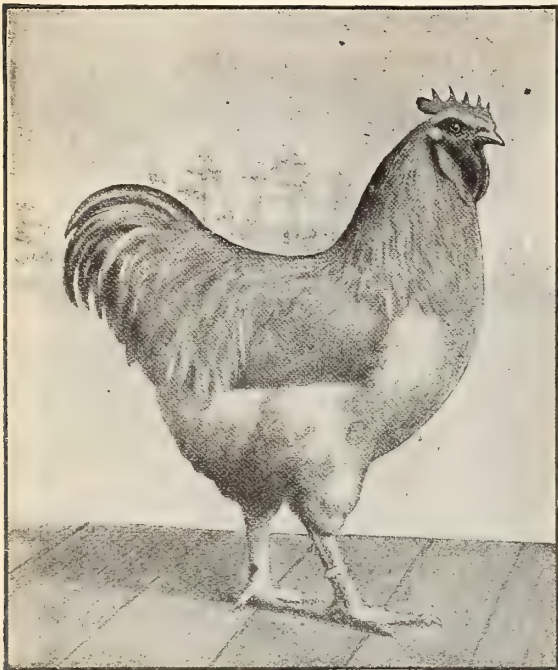

The Owen Farms entered only S. C. Buff Orpingtons here. This proved to be one of the largest classes in the show, and in this fierce competition they won third and sixth on cocks,

low of rare color and quality, very narrow and clean-barred; he also wins the color special. Second, close up, a shade stronger in color and comb not quite so good; beautifully barred and good style. Third, very similar to second and close up in every way; good shape and finely barred under. Fourth, a very clean-cut bird of even color and grand in shape; strong eye, extra good comb but fully finished in tail. Fifth, a grand bird of superb quality; not shown at his best, still a most desirable one in every way. Sixth, good, strong color and good form.

Hens: First, a grand hen with ideal shape, good size and beautiful clear color; sharply and evenly barred. Second, very similar to first, but not at her best at this time. Third, another beauty and of excellent form. Fourth, we liked this one in particular for her shade of color and style of barring; while just a mite short in body, she was a wonderfully fine hen. Fifth, another with the proper shade of color and properly barred; we liked her shape and style in particular.

Sixth, at her best should make an extra strong hen.

Cockerels: First, a very strong and narrow-barred bird, while strong his color is clean and sharp, barred even and straight and right down to the skin in every section; a grand winner. Second, very similar to first; good all over and

Second Buff Rock cockerel and shape special at Boston, 1908. Bred, owned and exhibited by M. J. Corey, Springfield, Mass.

very even. Third, a half shade light in hackle, but otherwise grand in color and barring, extra under; good shape and finish. Fourth, another good one, probably a little past his

AN "ARISTOCRAT."

Without doubt one of the best S. C. R. I. Red cocks in America. Color deep brilliant red, strong wing and tail. Note wonderful type. Weight, 9 pounds. Bred and owned by Ira M. Crowther, Willoughby, Ohio.

best. Fifth, a grand, big fellow of extra shape; not as narrow-barred as the others. Sixth, just a little past his best form; beautiful head points and sharp, clean color.

Pullets: First, one of the brightest, cleanest-barred birds

we have seen; very narrow and sharply-barred, with a wonderful contrast of color. Second, grand in shape and style, but not fully developed in tail; wonderfully barred, with extra fine wing, breast color and barring grand to see. Third, another good one, finely barred and of excellent form. Fourth, very narrow and sharply barred; this style of barring just suits us, the bars of equal width and showing clean and clear to the skin. Fifth, very similar to third, but not as fully matured; will make a grand one. Sixth, another of rare quality.

Pens (Old): First, there was class to this pen in every bird; evenly matched, they were the highest type of exceptional show hens; the male one of the grandest, and a noted winner and breeder. Second, a pen of strong females, well shown; the male, another winner of note, was not at his best and did not match the females as well. Third, four handsome females in here, well mated; the male, while a strong one in color, had passed his best show form.

Pens (Young): First, a good winner in a strong class; the male we had handled before and pronounced him one of the best males we had seen; females of grand quality and well mated and shown. Second, male rather young but of rare quality and grandly barred, he should make a great

breeder; females clean and very even in quality, all strong in eyes, legs, etc. Third, another grand pen with a choice male; quality equal of the best, and extra shade of color.

White Plymouth Rocks.

Cocks: First, extra in type, also winning the male championship special; shape of back, breast and body ideal, good comb, strong eye and shown in rare condition. Second, another grand bird close up, splendid condition and of good type; extra good comb and strong eyes. Third, a strong specimen of simply grand shape, fine head points and pure white; grand size, showing vigor in every line. Fourth, a real good bird in every way; we thought him past his show form. Fifth, a big, clean fellow of pure color and grand condition. Sixth, a well-placed bird, not at his best; most likely a grand breeder.

Hens: First, a choice specimen shown in prime condition; choice shape and strong head points. Second, very similar and close up to first in every way; a grand pair. Third, another warm one, with every required quality to make a strong show bird. Fourth, chalk white, grand form and

beautiful head points; was laying, and past her best. Fifth, not in full tail, otherwise simply immense.

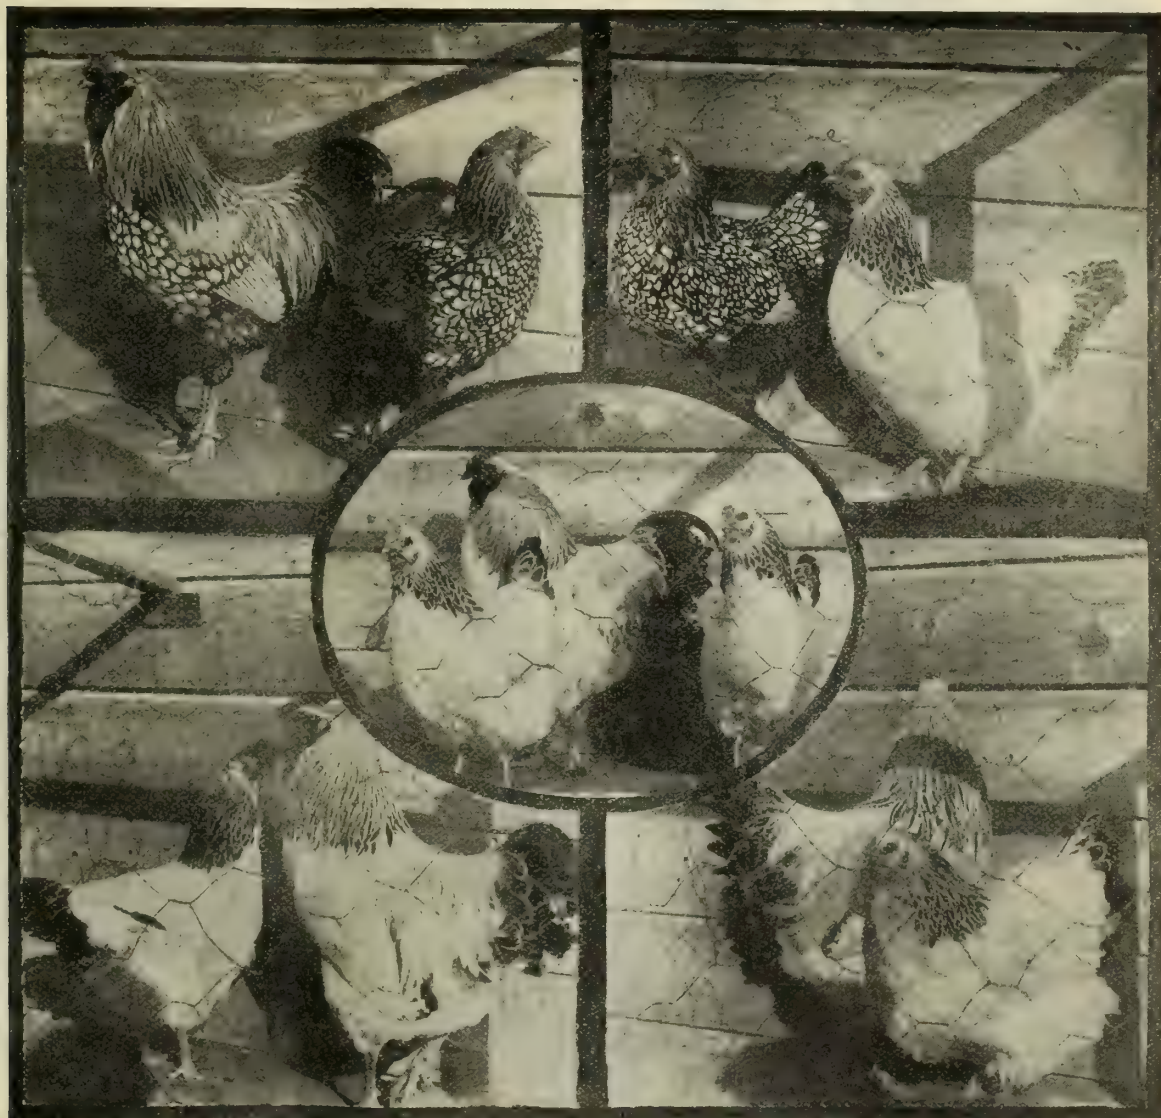

Cockerels: First, grand in every section and one of the whitest birds we have ever seen, strong red eyes and pure yellow legs, well set; also wins the color special. Second, close up, of extra shape and style, he wins the special for best-shaped male in class; good comb and choice red eyes. Third, not fully matured, but showing every quality of being one of the best. Fourth, a bird of extra quality, but not at his best here. Fifth, a good one, still young; will be a hummer later. Sixth, also young; a rare specimen with exceptional head points.

Pullets: First, the gem of the class and shown in the pink

Buff Plymouth Rocks.

Cocks: First, a grand one in every way, also wins the shape special; strong head points and fine shade of color. Second, very close up, not fully finished in tail, he also wins the color special; his is a beautiful shade of color, sound and even in every section. Third, grand in form and color, lacking a mite in finish. Fourth, similar in style and close up. Fifth, good and clean and well placed. Sixth, not in his best show form; rare in shade of color and no doubt a grand breeder.

Hens: First, sound, even color, free from any white or black; good form and head points. Second, very choice and only lacking a mite in condition; strong head points. Third,

Photos taken January, 1909, showing our Wrاندottes just as the camera saw them and you will find them if you visit our yards. Bred and owned by J. Frank Van Alstyne, Niverville, N. Y.

of condition, white as chalk and of exceptional form; strong red eye and perfect comb. Second, a grand bird in form and size; not properly conditioned, but this quality is bound to win a place. Third, close up, better condition, but some smaller. Fourth, a rare quality specimen; white, and shown in good form. Fifth, rather young, but of good quality. Sixth, a real beauty, white and good form; laying and loses on condition.

Pens: First, one of the best class pens we have seen, the male of beautiful form and condition, and the four females grandly matched with the same high grade show quality in all; this pen was extra in color of eyes and legs and as white as white can be. Second, a very good pen well-mated and with good heads. Third, another fine pen, but lacks some on condition; the females of good quality and shape. Fourth, real good, but not shown at their best.

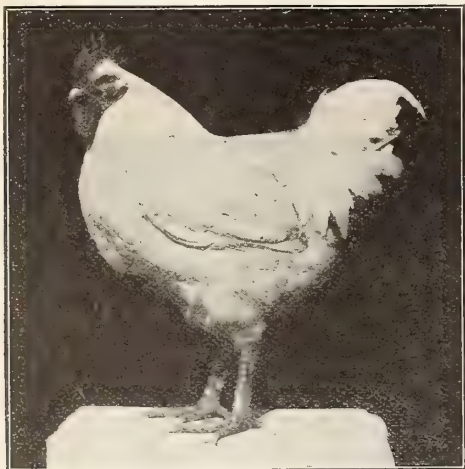

just a half shade light, but sound and even color. Fourth, a large hen of good color; past her best show form. Fifth, good shade of color; strong eyes and good head. Sixth, a good, even shade buff hen; not as clean in tail as the other winners.

Cockerels: First, strong in type and shown in the pink of condition; good comb, strong eyes and a beautiful rich buff throughout. Second, good form and sound color, with strong head points. Third, a hot big fellow of extra form; lacks a little in finish. Fourth, close up, with real good color. Fifth, not shown at his best here; will make, we believe, a great bird. Sixth, also needs time to finish out; nice color.

Pullets: First, clean, sound buff from tip to tip, beautiful form; perfectly clean tail. Second, very choice and close up, making two of the rarest quality kind. Third,

grand in every way, quality very evident; good eyes and strong head points. Fourth, good in every detail. Fifth, similar to third; gone a mite by, but good as the best. Sixth, another warm one; if shown at her best would make all step to keep up.

Pens: First, a rare pen from every point of view; the male of exceptional shade, clean and sound from head to

First prize White Rock cockerel at Fort Wayne, Ind., January, 1908. Bred and owned by J. H. Trobaugh, Delphi, Ind.

tail, fine head and strong eyes, with legs well set; the four females of equal high grade and finely mated. Second, another great male here, but females not so well matched as in first pen. Third, females not at their best; male a hot one.

Fourth, close up; quality good. Fifth, another good pen well done.

Partridge and Silver-Penciled Rocks were shown in limited numbers, and while the quality was good, we look to see larger entries of these beauty breeds in the future.

Columbian Plymouth Rocks came out strong in numbers, great improvement was noted here, the winners in particular

showing strong markings and grand color. Form is still lacking some; this will be had in time and a good future awaits this variety. We think that anything that can command the name Plymouth Rock is assured of success.

Silver-Laced Wyandottes.

We were pleased to see the large entry of this grand old variety. They are a quality breed and are bound to again come into popular favor and to regain the proud position they once held.

Cocks (10): A grand lot, with good Wyandotte heads and type, and good color and markings. First excellent in both type and markings. Second, another of rare quality, with third close up.

Hens (15): Some of these not in the best of feather, but quality very evident; winners well placed. First, one of the best laced females that we have seen. Second, also very fine and of good form. Third, one of the best in the class; finished throughout.

Cockerels (8): A strong lot in type and of good sound color. Head points stood out as a strong feature of this class. First, clean-cut type, extra comb and finely marked.

Second, good in every way and very close up. Third, clean color and of rare type. The class looked good to us all through.

Pullets (16): An admirable class of birds, good lacing here and excellent types. First, a beauty, finely done on breast and all over. Second, close up and of fine form. Third and fourth, very even and very similar; good in type and choice heads.

Golden-Laced Wyandottes.

These were also shown in good numbers—five cocks, eleven hens, nine cockerels and thirteen pullets. Here again quality was the rule, the class as a whole showing strong in type as well as in markings. The head points stood out prominent here. We did not have the opportunity to handle this class, but the winners all looked good to us, and we can safely say that there was good quality in most all birds shown.

White Wyandottes.

As may be expected at Boston the great class of the show was the White Wyandottes; quality was everywhere very evident, and we consider that the judge did a handsome job.

Cocks: First, a beauty, chalk white; not fully finished, this making the back appear a mite long. Second, grand in type; finished tail and good head. Third, tail not fully in, but in type simply immense. Fourth, chalk-white bird; comb rather short, good style. Fifth, rather narrow and not as full in breast; a good type, just the same, and we understand an old favorite winner. Sixth, we thought rather long on legs. No. 562, a bird of extra type, grand head, tail, etc.

Hens: First, very sleek, good size, fine type and grand head points. Second, a trifle short for depth; was the first hen at the Providence show. Third, good in color, but not filled in breast. Fourth, some on the Rock type in back and breast. Fifth, good type; beak not rightly curved. Sixth, grand color, but a little long in back. No. 585, a very good type, finished tail and extra comb.

Cockerels: First, a most beautiful specimen, some thought an extreme in type; be that as it may, he was a great bird of best possible quality; chalk-white, with good head and

Second, equal in merit and shown grandly. Third, close up, quality of the best; we noted extra heads here.

Young: First, very shapely; a grand cockerel here; the four females well mated and of good quality. Second, another quality pen well matched in type and of best show condition. Third, strong in shape and of good color, with grand heads.

Buff Wyandottes.

The Buff Wyandottes were strongly represented here, the old as well as the young birds were of very choice quality, and in particular we were pleased to note the exceptional good character of the head points. Shape was also an important factor that one could not help but note.

Cocks (7): The winner was a beauty, of sound, even color of the most desirable shade. Second and third, were well placed and of good type and color.

Hens (7): Here again quality was the rule; the first hen a gem among gems, good type and in particular a well-made

J. W. Andrews, of Dighton, Mass., first prize young pen at Boston, 1909. Mr. Andrews has won first pen at Boston on White Wyandottes 1906, 1907 and 1909. He did not show for competition in 1908.

strong eyes. Second, splendid type, with pure color. Third, elegant head points, nicely finished. Fourth, a grand-shaped bird; good eyes and comb, just a trifle narrow head. Fifth, close up and very clean-cut. Sixth, was good in every way. This certainly was a grand class of cockerels.

Pullets: First, excellent shape, chalk-white and fine head; the back shape was a revelation. Second, one bound to win a good place in any company; head points far better than usual. Third, very similar to second and a real beauty in every line. Fourth, a choice Wyandotte in shape and color. Fifth, strong comb, good color and fair back. Sixth, fails some in shape of back and comb.

Pens: There was a grand entry of fourteen pens; quality uniformly good. Prizes were awarded here to both old and young pens.

Old: First, pen of typical females, with a beauty cock.

back. Second, of good form and sound color. Third, nice and clean, with shape and size.

Cockerels (11): First, a great winner in a strong class; a Wyandotte in every line, and of sound color. Second, another grand bird, close up and finely finished. Third, just the kind we dote on in form and color. The others all well placed, and a choice class it was.

Pullets (13): First, of good size and fine form; color of the best. Second, was very similar in quality. Third, along with the balance of the winners was well placed, and all had commendable quality.

Seven pens concluded this class. They were of the same high grade, and it was our opinion that the judge did his work well all along the line. For me to describe these pens more minutely would simply be a re-hash over again. It was a case of type with color, and those conforming nearest to the Standard demands won.

Partridge Wyandottes.

Here was another good and strong class of this beauty breed. There were six cocks, seven hens, eleven cockerels, seven pullets and three pens shown. Shape was the prominent feature here. As this is the most important point to breed for, and when you find it with good, sound color and markings, we may well say that we are progressing. The Partridge Wyandottes are improving, and with their natural beauty to attract, we can safely predict a wholesome future

**WHITE PLYMOUTH ROCK.**

Fourth pullet, Boston, 1909. Bred and owned by Lyman H. Hill, Station 3, Jackson, Mich.

for them. While in this class there were some birds that stood out strongly with exceptional quality, the class as a whole was good, and here again we are pleased to note that the judge did excellent work.

Silver-Penciled Wyandottes.

All that we have said above also applies here. The

**WHITE PLYMOUTH ROCK.**

First cock, Detroit State Show, 1909. Bred and owned by Lyman H. Hill, Station 3, Jackson, Mich.

Wyandotte type is safely carried here, and this with their attractive color and markings makes one look long and wonder if there is anything else just as nice. We have never seen a larger or stronger class of the variety. There

were seven cocks, eleven hens, nine cockerels and fourteen pullets. Good heads and good eyes prevailed. The color and markings of the breasts are getting stronger, and with this improvement to note, along with the improved color of legs, we will pass on for now.

Columbian Wyandottes.

We had arranged for special notes on this class with an expert, but to date they haven't arrived. Our own notes are not complete and we can not give this class the attention we had hoped to.

Cocks (6): A good class with uniformly good markings. First, cock an exceptional bird in type and markings of hackle and saddle, and a good head. Second, very close up in color and of good style. Third, grand shape with sound tail and fine hackle. The other winners looked good to us but our notes did not cover all.

Hens (14): First, very fair comb, with good neck and fine formed back. Second, close up, a bird of rare quality; she has a splendid wing and tail. Third, this one looked extra good, and with her near ideal shape and fine markings is a most desirable bird.

Cockerels (29): A very large and great class of birds.

Winner of \$25 cup for best White bird in competition, any age, sex or variety.

The winners were without exception a choice lot. The first cockerel was a beauty in form, with sound tail and excellent markings. Second, another hot one. Third, very good in type and with extra head points.

Pens (3): The first pen male was a choice headed bird of rare form and well finished, grand hackle and very nice saddle. The four females were well mated, with good necks and combs. Second, four hot females; the male not shown at his best. Third, fails mostly on condition.

Single Comb Buff Orpingtons.

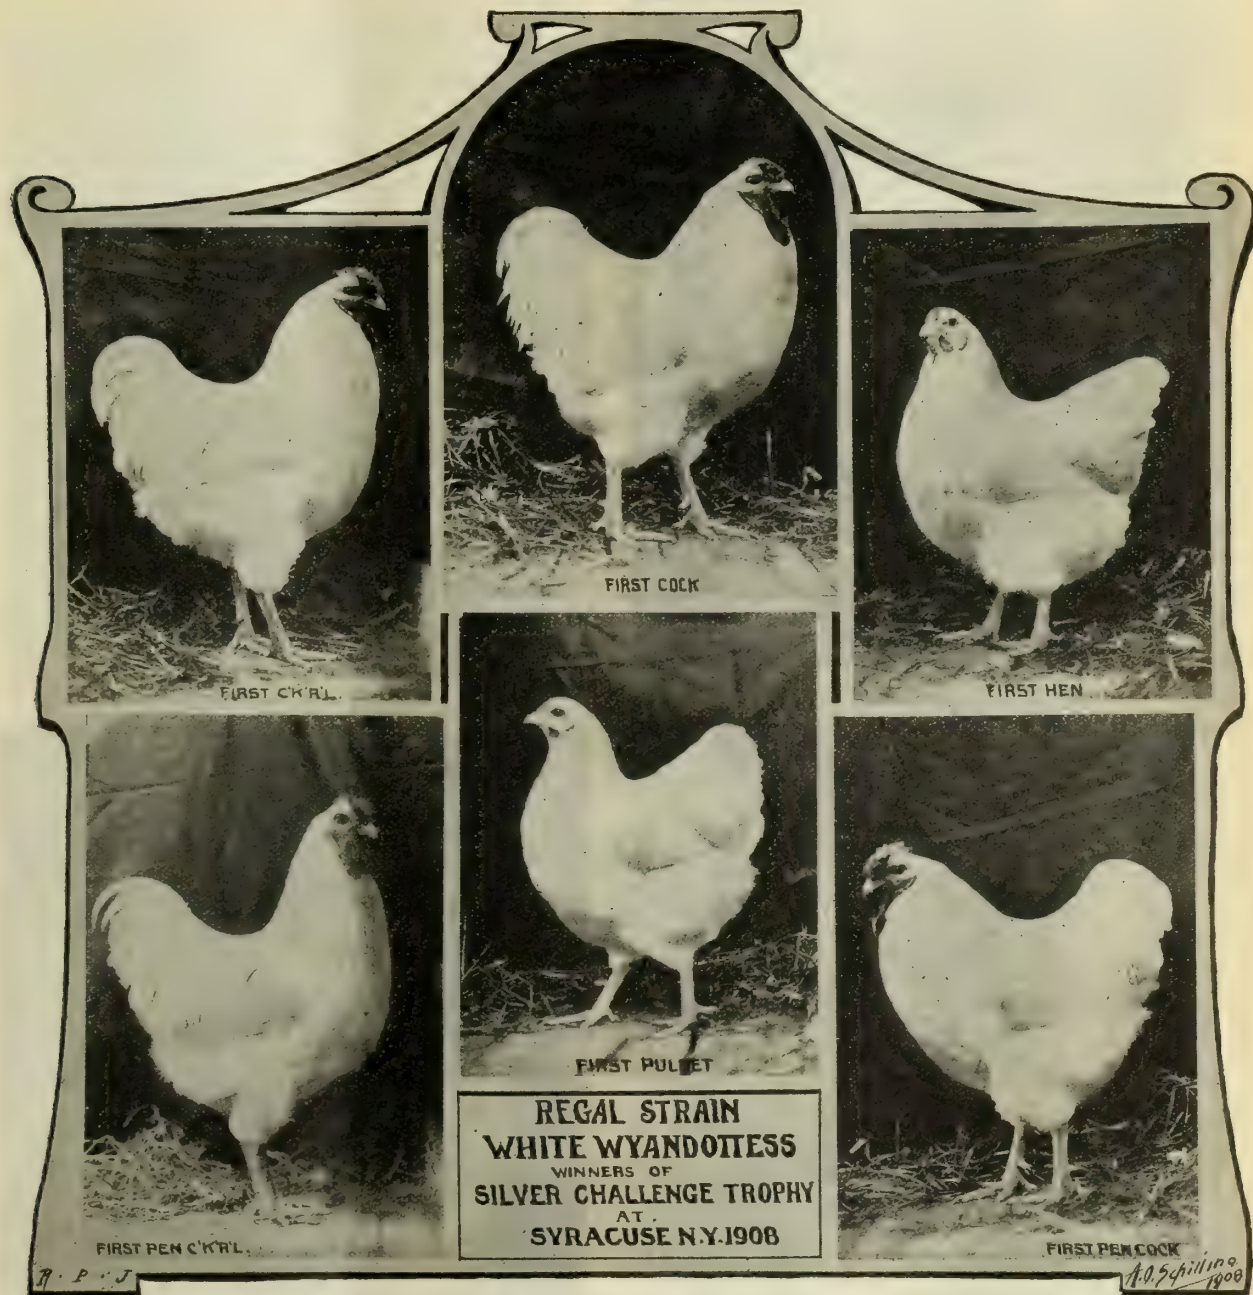

A very large and strong quality class. Shade of color along with form was very conspicuous here.

Cocks (14): First, the New York winner, and the winner of shape special. A bird of good type and sound color, very good head points and well placed at both shows. Second, good head, even and sound color; a big bird and a little too high up. Third, another even and sound colored bird, not as large as the second, but of much better type; fine in eyes and extra strong in head points. Fourth, another large bird; not as sound in color as the other three. Fifth, rich even color, very sound and of good type. Sixth, an elegant cock of half shade lighter color than the others, with strong type and grand head.

Hens (18): First, the winner of female color special.

The finest all-around true Orpington shown; beautiful color, extra head points, and of splendid size, with rare type. This is the hen that the New York judge disqualified without taking her from the coop, because she had the habit of throwing her tail from one side to the other. We called attention to her at the time and in our report gave our opinion that no cause existed for such action. Second, a very fine hen, indeed, grand in type and sound as a nut in color. This grand hen was also unplaced at New York.

consider this the best Orpington we have seen. Sound and even color, grand size, good type and excellent head points. Second, a smallish cockerel of grand color and good head points. Third, a fine headed cockerel, not large, but fair in color and of good type. Fourth, a big bird of even top color, but failing somewhat under. Fifth, an extremely fine type bird, fine in head points and sound in color; under color of hackle as good as we have seen. Could well have been placed up to third. Sixth, another extremely sound

REGAL WHITE WYANDOTTE 1908 TROPHY WINNERS.

The above picture tells a remarkable story. It is seldom that a poultry man makes such an extraordinary winning at a show, and it happens less often that such a victory is repeated the second year. At Syracuse, 1908, the White Wyandottes of Mr. John S. Martin, Port Dover, Canada, made the same clean sweep that his birds did last year. Birds of this strain have been winners also at recent New York and Boston shows.

Probably no other bird in the show attracted more attention than the first prize hen shown above. Four prominent judges who were present carefully inspected her and agreed that she was exceptionally fine in type. The back and tail formation were especially good. She was symmetrically rounded in all sections, the back sweeping gently to a set of closely lying coverts which partially covered a well-spread tail that was carried at the right angle, causing very little break at the junction of cushion and tail. That Mr. Martin studies his birds and knows how to properly mate them is clearly shown by his victory this year. A man may produce prize winners by accident one year, but when a strain of birds makes such a winning the second year their owner is to be congratulated.

Third, another beautiful hen, great in color and type, with good head points. Fourth, another hen of fine type, even color and rightly placed. Fifth, a grand old winner of other years; not quite as good color this year and lacks in type to those placed above her. Sixth, a hen of very fair color, good head, but much inferior in type.

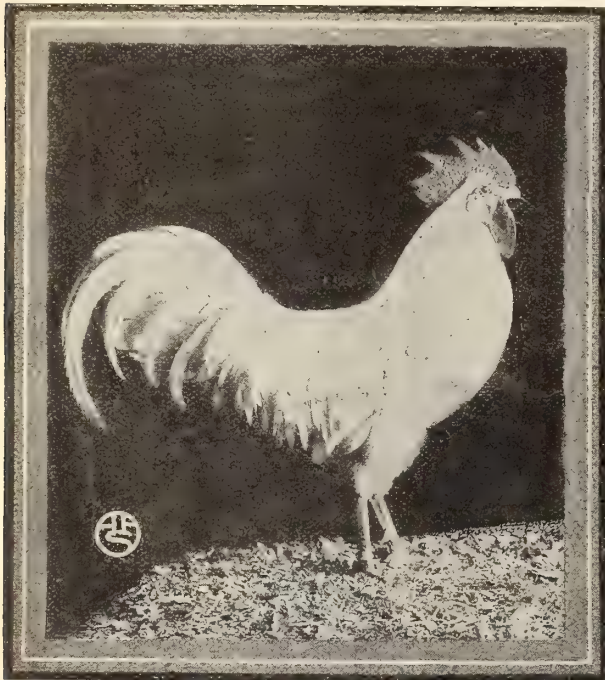

Cockerels (16): First, and the color special male. We

colored cockerel, of fine type, still a little young but will make a star a little later on.

Pullets (17): First, a grand big pullet of fine type, good comb, red eye and sound color. Second, another choice pullet, close up with fine head, eyes and comb, and grand in color. Third, rather poor in comb and a little rich in color and of good size. Fourth, a very soft and even col-

ored bird, extra good size and style. Fifth, sound even color, fine under color; with strong eye and grand comb. Sixth, a nice little pullet of good color and very fine type.

Pens were a choice lot, well mated and of exceptional type. First was a grand pen of high quality, the male fully equal to the best, his surface and under-color extra sound, and as even as we could wish for. This with a grand head and

First S. C. White Leghorn cockerel, Peoria, November, 1908. Special highest scoring male bird in show. Bred, owned and exhibited by The Parkside Poultry Farm, Box A, N. P. Easing, Proprietor, Pekin, Ill.

strong eyes made him the beauty of the class. The four females were of similar high grade, with type the prominent feature, clean in tails and finished in detail. Second, another real good pen properly placed and of a quality to make all hustle to beat them. Here again we found the male of very strong quality and, including the females, all were of real sound color. Third, a good, finished bird, and with four well mated and even colored females. Fourth, another pen close up and of grand character. Type was strong here, and while the condition was not as good as in most of the others, it, nevertheless, is a strong pen of high quality.

Black Orpingtons.

Another good class of birds; while not as large a class as the buffs, the quality was good and the type in particular noticeable.

Cock: First, grand size and excellent in both color and size; the winner of both shape and color specials. Second, good color and type. Comb has been very good, but now damaged by frost. Third, good head and color; fails in type below those placed above him. Fourth, good head; fails in type and color.

Hens: First, fine in head, long deep body, back a little long and tail a trifle low. Second, a fine hen, good in type and color. Third, another good hen in shape and color; fails some in head points. Fourth, grand blocky hen of good color and fine head. Fifth, good type bird, but not as good in color. Sixth, smaller hen, nice head and type.

Cockerels: First, good long back, comb a little heavy and damaged by frost; will be of good type and fine color. Second, better in head points, and crowds the winner hard in type and color. Third, winner of color special, grand good color and good type; fails in comb and eyes. Fourth, comb damaged by frost; extra bird in type and good color. Fifth, good blocky little bird; off in comb and eye. Sixth, will make a good one; too young here.

Pullets: First, good head, fine large bird and good type and color. Second, color special, a good pullet, but not as good type as the first. Third, another good, large pullet; nice color and type. Fourth and Fifth, very much alike, and both real good birds. Sixth, also nice and sound in color.

White Orpingtons.

A good large class and chuck full of quality. The awards were well placed all through, and every one was happy.

Cock: First, an exceptionally strong Orpington, extra in shape and head and shown in the best possible condition. Second, another of splendid type and nice head. Third, close up and well conditioned.

Hens: First, an extra choice hen, grand in shape and good head. Second, a fine hen of superior quality. Third, a well placed grand hen, nice shape.

Cockerels: First, another grand male of the best of type and shown in prime condition, capable of winning at any show; good head, etc. Second, ran a good race and was in it at the finish; there is no discredit to be beaten by the winner. Third, good, and another hot one.

Pullet: First, and color special. A prime specimen and a good winner. Second, good size and of grand shape. Third, close up; type extra and shown in grand condition.

Jubilee Orpingtons.

A fair sized class of very good birds. Good size and color and very fine Orpington shape.

Light Brahmas.

One of the quality classes of the show. The classes were all filled and condition reigned. Much attention was paid to this class, as it well deserved, for it has been years since we have seen any to compare with it.

Cocks (10): First, a grand big fellow of exceptional type and in the best of condition. Markings of hackle and saddle were simply great. Second, another bird of good type and excellent color and markings. Third, just a mite more blocky and a wonderfully fine bird.

Hens (12): The type of this bird as well as her neck markings are the equal of the best. You simply could not get by her. Second, very fine in every way and only lacks a little in toe feathering. Third, another beauty, and with extra fine hackle markings; shape and color of tail and wings great.

Cockerels (14): First, here again the hackle and saddle markings draw attention, so clean and so well done that they stand out as the strong point. Second, very close up; of grand type and fine feathering. Third, another grand bird, but hardly in the prime condition of the other two.

Pullets (14): First, a choice big bird of exquisite form,

GOLDENGLOW PRINCE.

Champion S. C. Buff Orpington hen, winner of four firsts, never defeated. Property of J. Oliver Willard, Linden, Mich. Taken from an untouched photograph at the Detroit show, where she won first.

and very clean in color and markings. Second, another just like her and of the same high quality. Third and fourth again resembled each other; both clean and of good type.

Pens: Twenty-one were shown. We had never seen anything approaching this before. We spent much of our time

in looking these over and could not help but admire most every bird. The feature here was condition, this with an even and uniformly high quality made the picking hard. We handled a great many of these birds and well know that unless we described nearly every pen it would be an injustice to several, so we will content ourselves by giving just a general review: Toe feathering was well done on

all and type was strong. The markings of hackles and the saddles of very fine grade all through the class. The wings of all that we handled showed strong markings, and the tails averaged very good.

Dark Brahmas.

Twenty-seven birds shown and one pen; some of these were of extra quality, and the average was high. Philander Williams was an exhibitor here and his birds still have the type that made this line famous years ago. The First Cock and the First Hen were in particular strong specimens of rare markings and the required Brahma type, with grand toe feathering.

Buff Cochins.

This class was surprisingly small. The breeders want to wake up and show their birds.

Partridge Cochins.

Here were good large classes with the best of competition. Cochin type was the strong feature here, and that closely followed by the wonderful color and markings of these birds. The best in the world were right here, and we joined many a pilgrimage to the Partridge Cochin isles.

Black and White Cochins.

These were represented by about twenty birds in each class. Type and condition were very evident here and the classes were all strong on color.

Black Langshans.

Forty-one birds were entered here, making very strong competition all through. The winners were, without exception, birds of rare quality, and excelled in both form and color. The first cockerel in particular drew our attention and was a leader in every quality.

S. C. Rhode Island Reds.

There were forty-six of these shown; not as many as we hoped to see brought out by the fine line of specials offered here. While the numbers were lacking, there can be no question in regard to their quality. Form and color are being gradually improved along lines that promise results as well as the ability to retain their practical values. Head points are also being improved, and we believe the future has much in store for the reds.

R. C. Rhode Island Reds.

Here thirty-four birds were shown, but we will overlook all this in the quality found here. We would make particular note of the First Prize pullet. This is the best Red we have seen to date. Her form combined with her wonderful color easily make her the choice of the class. There were other good ones there, birds deserving special mention, but our opportunities to handle this class were very limited.

Silver Gray Dorkings.

We don't remember of ever having seen a larger or a better class of Dorkings than this one. There were fourteen cocks, twenty-two hens, eleven cockerels and thirteen pullets shown. Here also we had arranged with an expert to supply us copy on this class so that it would be properly presented to our readers, and here again we meet disappointment in not receiving same. From this it is very evident that in future we must only trust upon ourselves. We have long admired this variety. They are practical, and for those that fancy a white meated fowl they have every quality desired.

White and colored Dorkings were also here in fair numbers.

S. C. Brown Leghorns.

Here was one of the prime classes of the show. In both numbers and quality this class excelled all the Leghorns, and we wish to here compliment the judge, Miss Pitchlynn, for her fine and careful work.

Cocks (11): First, a grand bird of choice formation, good head and grandly striped hackle and saddle. Second, good in every way, but we thought not quite at his best. Third, a choice colored bird, with very fine markings.

Hens (10): A very clean hen, without a particle of shafting; her size was grand and she made a most attractive appearance. Second, close up and of fine form and good head. Third, very even in color and a good winner.

Cockerels (11): First, this was the quality bird and the best Leghorn we have seen; his size along with his perfect carriage, his color and his markings in both hackle and saddle, along with a superb head and as near to a perfect comb as we have seen, all combine to make him the unapproached

champion of the class. The second was a grand bird and good winner under most any conditions. The third also had every quality of a high grade show bird, and these with others can well afford to take lower places when compared with the first bird.

Pullets (16): First, a very nice bird of even color and fine markings. Second, close up, with extra colored back,

fine form and beautiful breast. Third, another real beauty of the finest quality.

Pens: First, a well mated pen with the best of quality as a prominent feature. The male here greatly resembled the winning cockerel, being very good in striping and color. Second, another real good pen, well mated and shown in fine condition.

Rose Comb Brown Leghorns.

Another good sized class, well balanced, and with form and condition the leading features. The markings of the males in both hackle and saddle stood out strongly, closely followed by the head points. The females averaged well in type and color, some of these appeared rather small to us, while as a rule the S. C. were of extra good size.

S. C. White Leghorns.

Here was another quality class; while rather shy in numbers to what we had expected to see, there still were a good representation there and a quality that fully made up.

Cocks: First, grand in size and condition; fine head and of the best leghorn type. Second, close up in quality but not finished quite as well. Third, another good one; nice full breast.

Hens: First, second, third and fourth all to one man; of the same type, with grand size and in the best of condition.

Cockerels: First, a very choice bird, of good shape and well shown. Second, close to first and grandly shown. Third and fourth, two very fine ones with good heads and fine yellow legs.

Pullets: A grand collection all through. The first and second pullets were prime favorites and good winners.

good, and this with very choice color gave it a tone and place among the best.

Blue Andalusians.

A good entry of these with twenty-four birds lined up and about equally divided up in the various classes. This is another old favorite kind and they have a claim on the fancy that will be hard to dispute. While they are difficult to breed to true color, the same must be said of every other variety, even the solid colored specimens. No variety lays a finer egg than do the Andalusians, and we doubt if any will lay more of them.

Black Spanish.

A very small class with but seven birds entered.

Polish.

Here we found one of the largest and best classes of Polish we have seen in years. One hundred and sixteen birds were shown in the various classes of a quality prime in every way and finished to the day.

W. C. Black were the largest class, and the best as well. The winners here were birds of exceptional merit, of good form and sound in color. The Crests of the first three cocks and the six winning cockerels were of grand formation, and as clean as could be. The females were close up in every way, making a display that for beauty was a winner.

The several other varieties also came out strong as a whole, while in most of them birds of rare quality were seen.

Hamburgs.

These were a whole show in themselves. About 175 birds were shown in all the classes. The Blacks were the largest class, closely followed by the Silver Spangled and the Golden Spangled varieties.

Approaching the Day Old Chick Plant of L. Yarian, Lima, Ohio.

Third, another beauty; well shown. Fourth, all around good with extra head points.

Pens: First, equal to the strong competition here, and a good winner in this strong class. The male was just to our taste, and the females of an equal high grade. Second, a well shown pen of grand birds; head points here were strong. Third, another good one with quality ruling.

The Rose Comb White and Brown, as well as the S. C. Buff and Black Leghorn classes, were rather scant here; few birds shown were good, and we look for more of them next time.

S. C. Black Minorcas.

There was a good entry here of very high class birds. Sound color and very good type. Head points were prominent factors here, and as a rule were nicely done. The first prize cock was the cream of the class; his shape along with his sound color was good to behold. The first, second and third cockerels were a whole class in themselves. Size and shape, with just the proper sound color and beautiful heads, were strong points. The first hen and the four winning pullets were also of the right type and sound in color; good heads were also seen here.

R. C. Black Minorcas.

This class was larger in number than the Single Comb variety, and we dare say it was of the same high grade quality all through. Conditions prevailed here strongly, and the winners had a strong claim on this. Head points in Rose Comb either make or mar much that is beautiful in birds, but here the class, as a whole, had superb combs and made a grand appearance. The type taken as a whole was

The Blacks, and in particular the winners, had plenty of quality, good sound color and nice form. The Hamburg head is a thing to look at and admire, and when properly shown, as it was here, on both the males and females, then those that can see something good in other birds may enjoy themselves. The heads here as a rule were very fine.

Both the Spangled and the Penciled varieties made a fine showing and what they lacked in number they easily made up in quality. Fine markings and good heads were prominent here.

Houdans, Etc.

This variety was represented by about thirty specimens. A good class of birds as to quality, but short in numbers. There were representative birds of Creve-Coeur and Faverolles, with a good class of Lakenfelders to fill in.

Black Breasted Red Games, as well as the Red Pyle Games had grand representation. Cornish and the White Cornish Games were small classes, while the White Laced Red Cornish showed up well, and with good quality. The Pit Games were also few in numbers, while of high grade.

The display of Turkeys was large, in particular is this true of the Bronze Turks. There was plenty of size and a high quality here.

Nearly 400 Bantams were shown in the single classes. The favorite varieties in the games leading in numbers and of an exceptionally high grade.

The Pigeon display numbered close to 2,000 birds and attracted much attention. These handsome birds will always receive popular attention, and no show is complete without them.

THE OWEN FARMS.

Devoted to the Improvement of Standard Bred Poultry.—
What One Man Has Accomplished.—The Man.—The
Plant and a Descriptive View of the Birds.

Written by H. P. Schwab, Eastern Representative A. P. J., Irondequoit, N. Y.

While at the late New York show we were pleased to have offered and to accept an invitation from Mr. Owen to visit his farms at Vineyard Haven, Mass., after the Boston show. From that moment we had great expectations. We have seen, in our day, a great many places—poultry places—where thousands have been invested, and where the poultry industry is carried on, at a scale that would almost be beyond the comprehension of those that have not personally seen. We were quickly interested here, for we wanted to see this place.

For years we have heard of the Owen Farms, have seen their pictures, have judged their birds, and have known Mr. Owen and Manager Delano. But we must now say that we have just become acquainted with them. Acquainted in a way that I would wish that every reader of these lines could become.

The Man Behind the Birds.

Mr. Owen is a man who does things, and is sure to make his mark in this venture. When he gave up his other immense lines of business to devote all of his time and energies to the breeding of Standard Bred Poultry, it was with the same determination that brought to him former success. The industry that can interest such a man, and such capital, is worthy of everyone's time to sit up and take some notes here.

Mr. Owen has been a fancier, we may justly say, all his life. Pure bred poultry has been his hobby, and it was but natural to suppose that when he should give up his lines of business, that his attention would be drawn to poultry breeding. This he has done in a whole-hearted way. He has taken off his coat and jumped right into the midst of his love's labor with a vim that is bound to win.

What This Man Has Done.

We have referred to Mr. Owen's former interests, and in order to present this man and his works properly, a reference here will be made to them. Mr. Owen became early interested in the Victor Talking Machine Company, and as the representative of this company lived in England and on the continent for eight years, successfully promoting the interests of this company, known there as the Gramophone Company. His resourceful, as well as wonderful abilities displayed in the management of his company's affairs won the day, and to England the entire continent of Europe was added to his cares, and when he laid down his work the talking machine was safely placed in every section of the civilized world.

His Master's Voice.

In Mr. Owen's home, and above the fireplace, hangs the original of "His Master's Voice," a picture made famous by Mr. Owen, who early recognized its value as an advertisement for the Victor machine, had it adopted as the company's trademark, and today is known the world over.

Perhaps the most interesting part, as well as the most valuable, of Mr. Owen's gramophone experience was his desire to give the public the best to be obtained, regardless of cost. He it was who raised this business from the level of the common plain, and placed it up so high, still within the reach of all. No cheap vaudeville stars interested him. The public were his patrons, and his endeavors to obtain and place within their reach, for them to enjoy, the work of the best artists of the day was a departure that more than any other act of his, or any other person, made these machines so popular and eagerly sought for. To obtain these results fabulous prices were paid, and in one case a noted singer was paid \$10,000 for consenting to sing, and then \$2,000 for each song, with an added royalty besides.

The World Better for His Work.

The result of his work is very evident, for today the public finds that the voices of the world's greatest artists, as well as the most rare and sublime music of its masters, can be had and fully enjoyed in every home, produced by the wonderful records of the Victor talking machine.

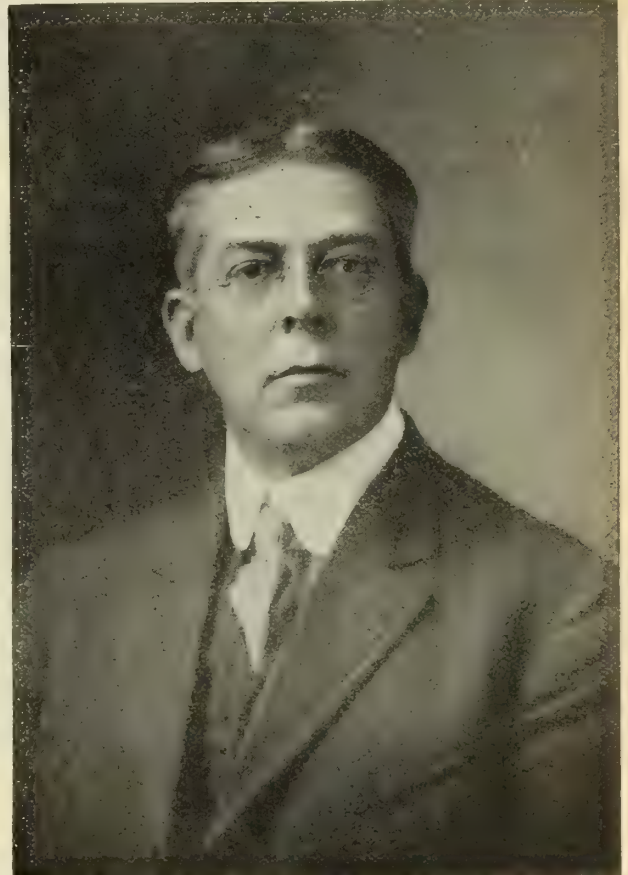

Moves a National Bank.

Mr. Owen's enterprise and his desire to serve his town's people has been illustrated in several ways, perhaps in none more than in his bringing a national bank to his town. Vineyard Haven is a town of 2,000 inhabitants and a bank was greatly desired, the nearest one being six miles away.

No charter for another could be obtained, so Mr. Owen bought up a controlling interest and moved the bank in this way. We hope with this to picture the bank, as Mr. Owen was the architect. It is built of stone with a tile roof; commodious offices are provided, and in every detail is a building adopted for business and comfort.

The "Owen Way."

We have gone into above detail to best suit our purpose of introducing this man as we found him. We now wish our readers to fully know Mr. Owen as a poultryman. On our way south from Boston the conversation most naturally was "chicken talk." As we have before stated, Mr. Owen has been a fancier all his life, and a breeder for a great many years. Knowing all this, we were still surprised to note his intimate knowledge of his mammoth stock. Talking of shape, or of color, he would often refer to several specimens by band number. His active, fertile mind and wonderful memory, as displayed here, astounded us.

WILLIAM BARRY OWEN.

Proprietor of Owen Farms, Vineyard Haven, Mass.

Conclusions can readily be drawn here: it is his attention to detail, no matter how small, that has been the foundation of his success.

Fruits and Flowers.

Mr. Owen has made all that he has; his interests, as shown, have been varied and his success great. But now they are concentrated only in his home, with his wife and family, and his poultry. The garden must not be forgotten, where the turnips and other vegetables, for which this section is famous, are grown. The greenhouses, three in number, are also here. Entering the first we find ourselves amid ferns and palms, while outside the earth is covered with a white mantle. In here we are in the midst of summer, and as we go forward can well imagine ourselves on the Florida coast.

The second house is principally devoted to blooming plants; here are the primroses and geraniums, the azaleas and a hundred other varieties, clothed in bloom and filled with fragrance. The next house is devoted to carnations, violets, as well as peaches, apricots, grapes and melons. If our heart has other than poultry desires, they were found

here amid these flowers and fruits, cultivated to bloom and grow almost at will.

The Stable.

The stable was next inspected. Seeing four automobiles here we feared for Mr. Owen's interest in the horse, but these fears were quickly expelled by further entry into the stable part proper. Here was horse flesh indeed good to see. The first one to greet us was a son of Lou Dillon, handsome in form, with a most beautiful and intelligent head, and his every move showing the speed for which this line is famed.

Manager M. F. Delano.

Luncheon, and then a drive with Mr. Owen to Tashmoo Farm. Here we found the manager, Mr. M. F. Delano, awaiting us. With Mr. Owen at the helm the future seems secure enough, still he has gathered around him men whose reputations are a further guarantee of success.

The poultry fraternity has long known Mr. Delano. He has been one of our personal friends for so long that it

MAURICE F. DELANO.

Manager of Owen Farms, Vineyard Haven, Mass.

seems we grew up together. He has made his mark, both as a breeder and judge. His abilities are unlimited, and in our long years of service we have only found the utmost respect for him in every section of this great country.

Mr. Delano has proven his worth and for years has been identified with mammoth poultry interests created by himself. Now as "head man" for Mr. Owen, with his only care the mating, study and the production of the "Owen Quality Kind," we can well say that his greatest success is to follow.

Mr. Delano was for years president and manager of the Millville Poultry Farm, breeding Barred, White and Buff Rocks, and White and Buff Wyandottes. This strain was known the country over, winning at the leading shows, and supplying winners for others. His abilities as a conditioner are well known, as is his fairness and his honesty. Everyone trusted in Del, and that trust has never been misplaced.

If further evidence is needed of his popularity and the esteem in which he is held by his fellow breeders, we would call to your attention the honorable positions of trust he has filled. He has always been active in club work and has for years been president and executive officer of these, and still retains these positions. We also find him a member of the Standard Revision Committee. His valuable service

on the last Barred Rock revision committee will never be forgotten. We can not overestimate this man, and are pleased at this opportunity to pay the tribute that is so well deserved.

Mr. D. W. Green.

We have not known Mr. D. W. Green, the assistant manager, as long as we have Mr. Delano, but by reputation we have known him for years. He is best known as a breeder of White Rocks. Starting breeding in early life he has stuck to it, winning a name as a careful and precise breeder and a place among the best quality producers of the day.

Tashmoo Farm.

With Messrs. Owen and Delano we started to do the farm. First on the list was the fitting building, a house 16x100 feet. Here were specially prepared coops for the fitting and conditioning of birds in any quantity. The "Owen Way" was evident here. Birds sold for exhibition are fitted and trained here by experts, and when they leave are fit for any competition. Bleaching is positively tabooed here. Nothing but clean and proper washing is done, showing the specimen at its best natural condition only.

The Incubator House.

Next we entered the Incubator house, which is partly underground. Here are forty-five of the 300 egg size machines, with every labor saving device. The ventilation in this building is a study and perfection itself.

The Brooding Houses.

There are eight of these, each 16x100 feet with a capacity of over 12,000 chicks. Each building has its own heating plant and is fitted with running water. They set strongly on stone foundations, with ratproof cement floors, and are sealed with wood pulp fiber, making them double tight and comfortable. There is plenty of light and proper ventilation.

The Colony Houses.

Then came the colony houses, of which we counted sixty; each is 8x12 feet, and to each is given about an acre of ground, fenced in. We had hoped to get a photo of these to show, as the plan suited us. The ground has a strong sod and there are plenty of trees and shrubs for shade. Over on the other side are the brood coops, where the little fellows roam until driven to the colony houses for more room, where the sexes and ages are divided. All the chickens possible are raised with hens. The hens and chicks have unlimited range, much of this is through the forest, as well as in the open, the ideal place for growing chicks.

The Breeding Houses.

There are eight of these at Tashmoo Farm. We did not get their exact size, but would estimate them at 16x150 feet each. The pens are 12x16 feet. Here running water is also supplied to each pen, and the pens for half their width are divided by a solid partition. All pens are roomy, well lighted and properly ventilated.

The Birds at Owen Farms.

Mr. Owen's determination to have the best led to several extraordinary purchases. England, the home of the Orpingtons, was gone over thoroughly and the very best show and breeding Buff and Black Orpingtons were bought, regardless of cost. Palace and Dairy winners were none too good, and we find that in one importation of thirty birds over \$10,000 was invested. Other importations have been made of equal significance, giving the reader but a partial idea of the expense entailed by this man to give the American breeders the best line of Orpingtons the world has produced.

His love for the Orpington, as well as his eight years of residence in their home country, with his opportunities to study and know them, has qualified him above all others to breed and to produce the best of the future. Mr. Owen's winners for the past four or more years have been produced on his farms.

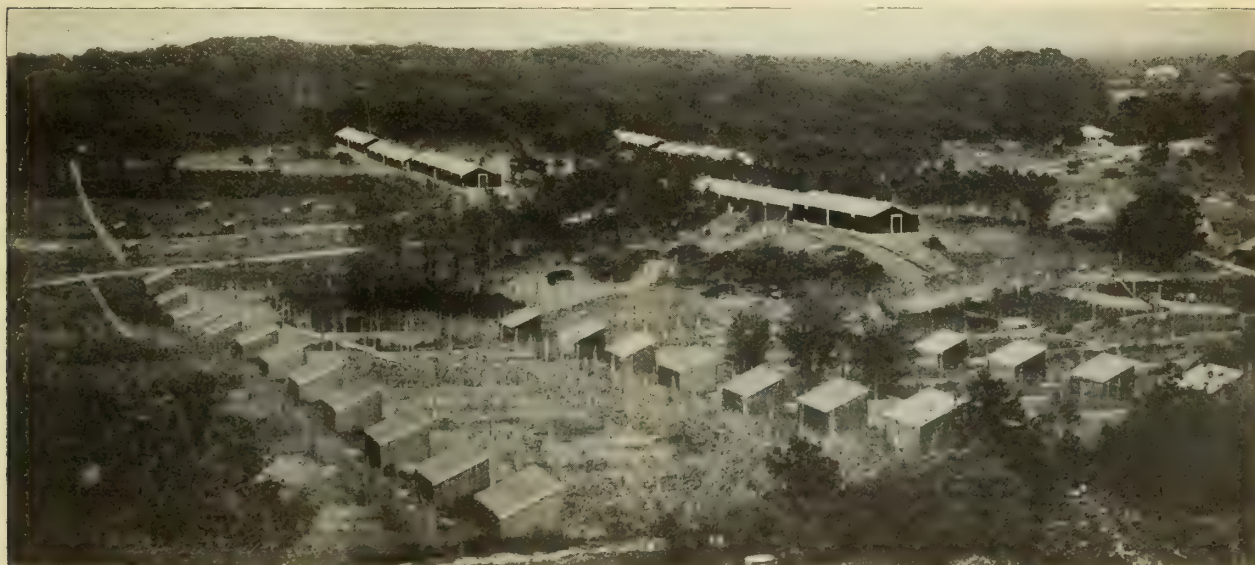

Buff and Black Orpingtons.

The importations above referred to were the foundation of the Owen Orpingtons, bred under his personal care, and with the skillful Delano at hand. The man who knows Buff and how to get it, and the one who, more than any other, has made the American buff varieties popular. We can well say that the improved Orpington is but a natural consequence, and the near future will see exports instead of imports.

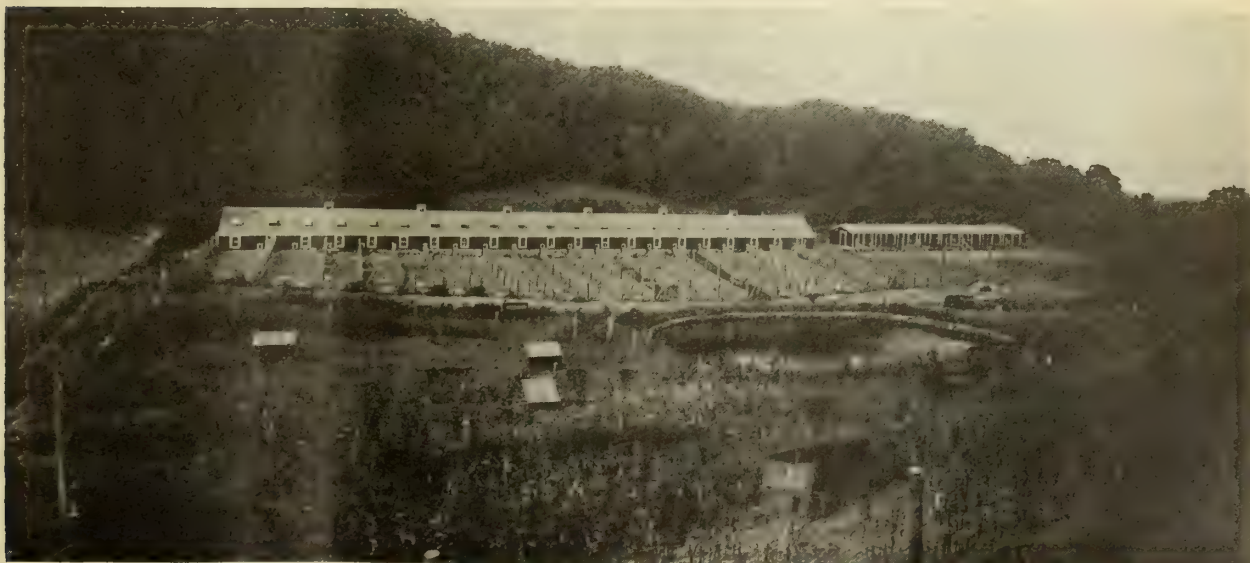

Entering the breeding pens we were all ready to be shown quality. Our expectations were placed high, and after seeing the pens, and going from house to house, these desires were more than realized. Going from pen to pen and handling the birds, as well as feasting our eyes with this color,

BIRD'S EYE VIEW OF ONE OF THE OWEN FARMS, VINEYARD HAVEN, MASS.

OTHER SIDE OF BIRD'S EYE VIEW.

ONE OF THE LARGE BREEDING HOUSES ON OWEN FARMS. THIS HOUSE CONTAINS TWENTY PENS.

that at perfection is so attractive, our desires were fully met, and our only regret was the limited two days at our disposal.

Shape we may well say is the feature here, followed so closely by color that they seem to blend into the one on all specimens. Head points, as a rule, make or mar the general appearance of the bird. We did not even see an indifferent headed bird on the place, taking all into consideration. The combs, as a rule, were of extra shape and texture, and the eye large, expressive and of sound color. For years we have known that one of the Orpington weak spots has been the under-color of hackle. We looked closely here for this and found such grand surface and under-color that we asked Mr. Owen what magic Delano had been up to. Another attractive feature was the clean and sound buff tails. We expected to find some good tails, but after going over this very large flock and failing to find one black tail feather we could well think that buff can be had with proper breeding, as shown here.

With their strong winning line still at the Boston show, we saw their equals here in most every pen. Several birds we handled were the great winners of last year, among these in particular we noted the first Chicago cockerel; he now weighs eleven pounds, has proven a good breeder, and his hackle is just as sound as when he won the blue at that great western show. The third New York cockerel came next, mated to rare females, a picture of vigorous beauty.

Residence of Wm. Barry Owen, the proprietor of Owen Farms, Vineyard Haven, Mass.

Next we noted the first Cleveland cockerel, well finished and in prime condition. Both New York and Boston winners were here, showing the same superb quality that placed them at these hot shows. Just so ran the quality down the line and through several houses. Noting that egg records were kept, we looked into this side of the question long enough to find that seventy-five pullets had averaged seventy-one eggs per day for the previous four days.

Black Orpingtons.

Next to the Buffs came the Black Orpingtons. These have been bred with the same care, and here again we found the same rare quality. Orpington type shows particularly strong in the blacks, and we can well say that this shape, with the sound color free from the plumb-barring generally seen were the features here.

We handled several mated pens here, among them many winners, and all of them birds of the rarest quality.

White Plymouth Rocks.

The determination to produce the very best of the American breeds led Mr. Owen some years ago to purchase at the New York show the two display pens of White Rocks shown by the late Harry Graves, paying a record price for them. With this purchase was included the \$500 champion cock. A year later at the death of Mr. Graves Mr. Owen purchased from Mrs. Graves the entire stock and good will of the Graves White Rocks.

With this start of the world's best known and best winning strain of White Rocks, further advancement has been made. Here we saw hundreds of White Rocks of the very best show quality. Red eyes and clean yellow legs. Legs set well apart

and perfectly straight. Not one of the common knock-knee kind was here. Head points were uncommonly good, the combs of medium size and well serrated.

Type, as may well be expected, was the feature here. We have given much of our time of late to articles describing Plymouth Rock shape—this essential feature is the one important one to keep the breed where it belongs—and the shape of so many birds that we have handled at the shows strongly called for these articles. When we find shape that is proper and what the Standard demands, then we are willing to state the facts. It is very evident here that Mr. Delano rightly understands Plymouth Rock shape. He was one of the revision committee to make this Standard, and I note that he has closely followed the rules as made. In this respect the Owen Farm White Rocks excel, having just the proper length back, full and good lengthy body, and tail carried at the right angle.

We handled birds in every pen of these, among them many that have been winners both this and last year. The first New York pen male was here mated. We expressed our views of him in the report of the show; his wonderful form with perfect head and 5-point comb combine to make him one of the rarest of the rare. The second New York cock and cockerel, as well as the Chicago winners, were also here, filling out a collection taken as a whole that would be hard to find equalled. Going through one house filled with surplus stock, and closely inspecting these, we can well understand why it is that they can send out birds on approval with the purchaser the sole judge.

The above cut shows the kind of houses and yards on the "Red Farm" of the Owen Farms, Vineyard Haven, Mass.

White Wyandottes.

The White Wyandottes are one of the specialties at the Owen Farms. This was one of their first lines. The Wyandotte shape is a thing of beauty, and for the form seen and bred here I would respectfully refer the reader to the illustrations by Sewell and Schilling. These have been shown of late in this and other poultry papers.

Their Wyandotte winnings for several years at New York, Boston, Chicago and other large shows is a phenomenal one and stamps this line strongly for its show quality. We find that at these three shows since 1906 they have won 12 first and 12 second prizes, with as many more shape and color specials.

The Owen White Wyandottes are of the same grade as their Orpingtons and White Rocks. And here again we had the pleasure of inspecting their flock and handling several of their great winners. Among these was the first pen male at the late New York show. At New York we were told he was the best Wyandotte out this year. Down the line we found a cock of splendid color and formation; we thought him the equal of any we had seen.

With these it was the same as with the others, for in going from pen to pen, and from one house to another, we found the same rare qualities, all with selected heads.

The Red Farm.

This farm contains 130 acres; it has a house capacity of something over 6,000 head. Poultry for eggs and meat are the specialty here. All birds raised at Tashmoo Farm that do not come up to standard "Owen quality" are sent here. Our time was very limited here, having delayed so long at Tashmoo.

This farm is about two miles distant, but with good roads in all sections is within quick and easy reach. Here Mr. Manchester is in charge, a practical poultry man of long experience.

Advertising Pays.

Mr. Owen firmly believes in advertising. If you have the goods, advertise them properly and you will find the market. Here again the "Owen way" is evident, and theirs seems to be the right way.

They guarantee to fully satisfy all, and the buyer is to be the sole judge. This is doing business in the open and has met with the greatest of success. Another feature of this man's way is, name me the price you wish to pay and I will describe what I can send for that money. If you are not satisfied with them send them back and I will pay the return charges. If fair means are to win, this will be a big success.

To Sum Up.

We have in this article only endeavored to be fair to all. We have pictured Mr. Owen just as we found him. He impressed me so strongly with his character and abilities, as well as with his sincerity, that in re-reading this article we feel as if we have only done him scant justice. That the poultry fraternity is better for having Mr. Owen as a member must be evident. While he has spent his money freely, in fact without limit, to secure the "best," and has built a plant that to some would seem lavish, we can truthfully say that he has not wasted a cent.

He has the plant, and he has the stock to hand out to his fellow fanciers, that when we consider the quality and the blood lines, at a price that is most reasonable.

The first prize in the contest this month has been awarded to Joseph Silk, Lockport, N. Y., and the second prize to Mrs. Joseph A. Pullin, Rensselaer, Ind.

OBSERVATION AND EXPERIENCE.

Today I received my first copy of the American Poultry Journal, and to say that I was pleased would be a mild expression. I searched from cover to cover to learn what ads it contained, and to find the most interesting article. After noting the systematic arrangement of the large number of advertisements, the beautiful illustrations, the publication of the New York show winners with addresses arranged alphabetically, I read several articles of merit, but the one that appealed to me most was the prize article by Mr. J. H. Van Meter, entitled "Master the Chicken Fever."

As the chicken fever grasped me several years ago, so the fever to attempt to write a prize article took a firm hold on me and if this attempt appears in print and benefits someone its mission will be fulfilled.

The chicken fever got a hold on me at an early age; almost daily I was obliged to pass a large pen of Light Brahmas. The sight made such an impression and created such a longing to own a few of these beautiful birds that several years later, when Brahmas seemed to have disappeared, an ad appeared in a local newspaper. I drove several miles to investigate and I never regret that trip. I noticed and mentioned the fact that the birds' legs and toes were not feathered as were the birds seen years before, but as they were as I thought the only Brahmas in the country, a cockerel and three pullets were purchased at one dollar each.

At that time I knew very little of the Standard qualifications, but through a poultry paper I learned that my birds were good shape but poor in comb and color of wing, with scarcely any feathers on legs and middle toe, but they proved to be fine layers, the three pullets producing 56 eggs in 23 days, so I determined to breed them and endeavor if possible to produce a bird with pea comb, proper colored wings and with leg and toe feathers, which I succeeded in doing by rigid culling and careful mating for four generations. The above experience is related to show what can be done if necessary and the benefit to be derived from such an interesting undertaking. Since the above experience I have purchased and have in my pens some typical Brahmas.

I also breed S. C. Buff Orpingtons and Indian Runner ducks; the former is a splendid general purpose fowl and the latter I believe to be the most economical and most profitable water fowl.

The price of stock and eggs is so varied that beginners frequently hesitate to purchase. I will discuss this fact but briefly. If you have had no experience purchase reasonable priced stock or eggs of the breed of your fancy, learn their "points of excellency" and endeavor to improve them each year.

Housing the breeders is most important—a tight house sweats and weakens the birds. A house that I have used successfully is built of matched lumber, is 6 ft. wide, 8 ft. long, 6 ft. high at front, 4 ft. rear, with two windows each 30x36 inches set on

outside of house with top fastened to front near roof and bottom set 1½ inches out from front to permit a free admission of fresh air. The space at each side of windows is filled in with tapered pieces to prevent wind and rain from entering. A ventilating door 10x10 inches is hinged on front near roof, swinging outward. With windows arranged as above mentioned all drippings fall on outside of house and house is free from dampness. It will accommodate from 10 to 16 birds.

A simple brooder is made by using a tight box 15x26x6 inches inside, cut hole in center of bottom and fasten an inverted pie tin in opening (bottom of box should first be covered with sheet asbestos), nail a 1-inch square strip to bottom on inside across each end, bore hole in bottom for 1-inch pipe or tube to be run from brooder to outside of brooder house for fresh air inlet. Make platform of ½-inch material, 15x26 inches, with ends extending upwards 4 inches high and sides 1 inch high, bore hole in center of platform for 1-inch hot air tube ¾ inches high above platform, drop platform in box—it should rest on strips making 1 inch space between platform and bottom of box and should bring the hot air tube above center of pie tin, under which is set an ordinary lamp with chimney. Cut 3x10-inch hole in side of box above platform, fit cover in top of box, and curtain to drop over opening in side of box; make run outside of convenient size, set brooder and run on legs high enough to place lamp conveniently, place litter on platform and in run, clean out frequently, feed in clean dishes, give water with chill removed, don't forget charcoal and grit and you can brood 50 chicks with safety.

"One step won't take you very far, you've got to keep on walking;

One little ad won't do it all, you've got to keep on talking."

Get the goods that the people want, select the proper medium and advertise.

Joseph Silk, Lockport, N. Y.

TURKEYS FOR COMPETITION.

I prefer sitting a hen on turkey eggs the same time I set the turkey hen. When they hatch give the little ones all to the turkey. Don't make the mistake of letting a chicken hen try to mother them, they do not take them in the fields for bugs and grasshoppers as the turkey will. Neither can they protect them from varmints and hawks as well. Better by far try to raise the ones you have hatched than to coop up the mother in order to get more eggs for a later hatch. Hens that lay early will wean their first bunch in time to raise a bunch of fall ones anyway quite often. Feed your poults first, last and all the time light bread dampened with milk (always sweet) and sprinkled generously with Watkins' poultry food or some other good make. I've known this to raise every turkey hatched two years in succession. Let the birds gather their own animal food and grit. Should there be a deficiency of bugs, worms and grasshoppers on account of drought, feed some beef scrap. For lice there is nothing better than painting their wings and head with fish berries soaked in alcohol. This is rank poison, so apply with a feather and not too freely.

For the roost make a shed, slope the roof, cover with tar paper or wild hay. The latter should be replaced each year by a new supply to avoid vermin. Enclose with wire netting. Make slanting roosts, because you can put more poults in your shed and as temperature changes they may have a choice. Always have plenty of roosting space; do not crowd. Now you readily see they are practically out doors, still they are protected from any night marauder. They soon come without any trouble to you for their evening meal and their home roost. You do not get so many culls from crooked breast bone, and if you wish to catch one the process is simple compared to climbing to the top of a walnut tree or taking one from the hedge. Make your shed high and have a door to fit snug and never neglect to close it nights. This way you can utilize the droppings also, an item not to be overlooked.

Always have fresh water ready for the turkeys. They are tired and thirsty after their long strolls. In order to live peaceably with your neighbors mark your entire flock, then there can be no dispute. Use the marker you like. I think a small bead fastened on the wattle with fine spool wire is good. You can easily see this, and there is but little weight to it and no danger of catching on any obstacle and imprisoning its wearer, neither is it likely to lose.

As to the breed there is a demand for good fat turkeys at top prices, no difference what kind, as soon as you can get them ready for market. We have chosen the White Holland because I think they lay more eggs, then they are not so apt to stray away so far to nest if there is any convenient place near home, and they sell for a cent more a pound than the colored ones do on account of the feathers. Hoping some one may be aided from my suggestions, I am

Mrs. Joseph A. Pullin, Rensselaer, Ind.

AMERICAN POULTRY JOURNAL

Issued the first of each month.

Published by

American Poultry Journal Pub. Co.

GEO. G. BATES, Pres.

103-113 So. Clinton St., Chicago, Ill.

GEO. G. BATES, Editor

J. W. BELL, Associate Editor

Irondequoit, New York

Subscription 50 Cents a Year—5 Cents a Copy of all Newsdealers. Chicago subscriptions 60 cents (when delivered by carriers). Foreign subscriptions \$1.00. Canadian subscriptions \$1.00.

Look at the date upon your wrapper. Many subscribers write to ask when their subscription expires and many complain because we discontinue sending the JOURNAL at the expiration of time for which it is paid. The date when your subscription expires is found on the wrapper each month.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide circulation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

Advertising rates are sent upon request.

GUARANTEED SUBSCRIBERS.

With each subscriber to our publication we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within two weeks from the date of any unsatisfactory transaction, with proofs of the swindle and loss, and within two months from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser he said, "I saw your advertisement in the American Poultry Journal."

Our Colored Covers

During the past two years we have been presenting our readers with a high-class color design each month on the front cover. During this time we have had a great many compliments paid us on these colored covers, which lead us to believe our work along this line is highly appreciated by our patrons. The American Poultry Journal is the pioneer in the production of colored pictures of poultry, having produced first colored pictures of poultry of any note fully twenty-five years ago, and since that time has produced more colored pictures of fowls than any other poultry publication in the world.

There is no doubt but what these colored pictures are of great benefit, as they are made as true to life as it is possible to get them, and shows the amateur what a bird of the variety they represent should be.

This month on our first cover page we present a pair of White Wyandottes, the variety that has made such a strong bid for public favor during the past few years. They are certainly one of the handsomest fowls we have today, and for general purposes they are conceded to be as good as the best. The artist has certainly done his work well and is to be congratulated on painting them so true to life.

Poultry Shows

Another show season has come and gone and with the closing of the Pittsburgh show on February 22 ended one of the most successful poultry show seasons ever experienced in this country. The poultry show does more for the industry than any other one thing. It gets people interested in the business; gives them the "chicken fever," as it were; helps keep up the enthusiasm, and spurs on those who would otherwise lag behind; causes more and better poultry to be produced; educates the beginner, and, above all else, brings the fanciers together, where they become better acquainted with each other. May the number of poultry shows increase.

There is no scarcity of candidates for the office of secretary-treasurer of the American Poultry Association.

* * *

This is the season of the year when the amateur counts his chickens before they are hatched.

* * *

Another new variety of fowl has made its appearance—the Barred Minorcas. A pen of these were exhibited at the late New York show and attracted considerable attention.

* * *

In this month's issue considerable space is given to illustrations, but the readers nowadays demand pictures. We are therefore satisfying both our readers and the people who own the birds illustrated.

—o—

Changes in Barred Rock Standard

It will soon be time for all suggestions from breeders to be in the hands of the chairman of the Plymouth Rock committee of revision for the forthcoming Standard of Excellence. And to make the new standard of the breed representative it will be well for breeders who have the best interests of the Barred Plymouth Rock at heart to get their suggestions in shape for presentation. Calls have been issued by the committee for ideas and those fanciers who have been contemplating over past standards and future ones cannot do better than to get these thoughts into tangible shape for the revisers, as they are to meet the fore part of April in Buffalo.

The first thing that we would call attention to in the ideal drawings as they are found in the last edition of the Standard is the relative size of the female compared to that of the male. Note, for instance, the size of the bone of the female. It is too coarse when compared to that of the female. Either the cut of the male should be larger or the cut of the female reduced to bring the proportions nearer real life, as it is found in the yards of all breeders. The shape of the female leaves little to be asked for. She is a bit too full in breast, is the consensus of a good many breeders. Otherwise she is a well-shaped bird or ideal to work to.

Take the shape of the male into mind for a moment and note that he is much too blocky. A slight lessening of the depth of his body just behind the hocks with a little more length of back would make a bird that stood more for the ideal male shape. The American Plymouth Rock Club issued an ideal drawing a few years ago that was very

clever in its portrayal of a good-shaped male. Doubtless many breeders will recall this drawing. It shows a very active male and one that had the necessary range of size to make a good weight.

In a recent number of the Reliable Poultry Journal, Mr. Victor Bradley makes the suggestion that the top sickle of the drawing be suppressed. We are heartily against this, but are with him hammer and tongs on lengthening the body of the ideal. The angle at which the tail is carried is a bit too high, though the tail should be well up and display a sort of defiance in the manner in which the bird decorates himself with it. A 45-degree angle is about right.

In the matter of barring of both the ideal drawings there is much to be considered. The barring on the wing of the female is far too open. The back presents an open appearance also and there is not one feather in the back proper that shows individuality. A study of the half-tones of the leading winners at recent shows will give one a better idea of what it takes to make a well-bared back in the female. Mr. Bradley says that the trend "has been toward darker color and wider barring than is standard." This is not the case in the Central West. We have been working toward a narrower barring, but in some instances it has been overdone by some fanciers and the birds bred so dark that they rusted easily in the sun and oftentimes grew very brownish from an excess of color pigment. Remember that the barring must be divided on the ground of the feather as far apart as the width of the bar. In the article referred to Mr. Bradley rightly says:

"We think a dark tip which is in harmony with the barring, both in width and inner edge, is right and is to be favored rather than any other ending. It should be narrower than the first bar, but so spaced from it as to lap on the first bar of the adjacent feather and become a part of it. Then if the first white and the first dark bar are right, we have the surface-lines so desirable. This requirement appears to be more essential in the female than in the male, and being desirable in the females is sufficient reason for demanding it in the males. It certainly should be a standard requirement in the plumage of hens."

There should be something in the Standard that calls for the matching of colors on both male and female in the exhibition pen. The general color of the females should match the color of the breast of the male. The next sketch of the female should show a much narrower barring in hackle and back.

Another thing that is being taken kindly by all breeders who have heard of the proposed changes is the lowering of weights for the Rocks a half pound on all four of the standards. This will lessen the tendency of hens to become baggy and will help toward a better layer and an earlier maturing bird. A coarse bird will not be able to show quality in color and barring that a bird a little finer-boned seems to so naturally acquire. Coarseness and beauty do not go hand in hand. Let the weights be cut down a bit and the results will at once be apparent in the breeding yards throughout the country. Too many excellent birds are being sacrificed because of this lack of a half or quarter pound of weight.

Poultry Secrets Disclosed

Is this cock properly held?
"Poultry Secrets" tells you
how to carry fowls, and scores
of secrets far more important
and hitherto unrevealed.

WE OFFER to all poultry raisers the essential knowledge and secret methods of many of the most successful poultrymen of America. As a rule these secrets have been guarded with extreme care, for it is on them that the great successes have been built. They have cost years of labor and thousands of dollars. They will cost **YOU** only a trifle and a few minutes to write us.

How We Obtained These Secrets

Michael K. Boyer, our poultry editor, has had exceptional opportunities and the closest friendship with poultrymen all over the country. They have freely told him many of their most jealously treasured secrets, many others we have bought, and this scattered material, together with several of Mr. Boyer's own valued methods, has now been collected in book form. It must be clearly understood that every secret printed has been obtained in an honorable way.

Dr. Woods' Egg Food Secret

Dr. P. T. Woods authorizes the publication of his system for producing large quantities of sterile eggs for market. Every poultryman who raises eggs for market must know Dr. Woods' method to be up with the times, and every householder who supplies only his or her own table will appreciate an increased quantity of the highest quality eggs for table use.

Secret of Fertile Eggs

Boyer's secret of securing fertile eggs by alternating males we believe is worth \$100 to any big producer of eggs for hatching, either for his own incubators or selling to others for fancy stock. It is something new, and the diagrammatic illustration furnished by Mr. Boyer makes the matter so plain that the novice can easily understand it. This system is already practiced or about to be introduced in one of the largest plants in the country.

Selecting the Laying Hens

Since the production of eggs is the very basis of the poultry industry, the ability to tell the laying hens in the flock quickly, without the aid of trap nests, will put dollars in your pocket. Do not keep on feeding the robber hens.

Here are a few more of the Secrets:

- 1 Secret of the Philo System.
- 2 Woods' secret of laying food.
- 3 Proctor's salt secret.
- 4 Mendel's chart of heredity.
- 5 Truslow's secret of high prices for ducks.
- 6 Hunter's secret of success.
- 7 Gowell's fattening secret.
- 8 Burnham's system of mating fowls.
- 9 Brackenbury's secret of scalded oats.
- 10 Secret recipes for chick feed; practically the same food as is now sold on the market at a high rate.
- 11 Secret of 200 eggs per hen per year.
- 12 Woods' secret of saving weak incubator chicks.
- 13 Secret of telling age of poultry.
- 14 Secret of preserving eggs—the only way.
- 15 Secret of celery fed broilers.
- 16 Secret of fattening turkeys.
- 17 Incubator secrets.
- 18 Broody hen secrets.
- 19 An exposure of the methods employed by some fanciers to kill the fertility of hatching eggs.

There are Scores of Others

I. K. Felch's Mating Secret

Many years ago Mr. Felch, one of the best known figures in the poultry world, published his breeding chart, but later realizing its great importance and value to him he withdrew it and kept the information for himself. He has now given Mr. Boyer permission to use this system and it is included in this book.

The Secret of Feed at 15 cents a Bushel

An enterprising poultryman has been advertising this secret for \$5.00 and pledging those who buy it not to disclose it to any one else; it has, however, long been known to a few poultrymen, Mr. Boyer among them, and the method is fully explained in "Poultry Secrets."

So-Called "Systems" Explained

A number of "systems" and secret recipes have been and still are sold at high prices. Some are good, but not new; some are new, but of little value. Some are worth the money paid for them. Poultry Secrets gives the facts.

Of course we cannot go to the length of saying that all the information in the book is new to every one. It is said there is nothing new under the sun, and the Egyptians were hatching eggs by artificial heat centuries ago; but we do say that to the great majority of poultrymen these secrets are absolutely unknown.

We Will Pay \$10.00 For Any Secret Not in the Book

provided it is practical and valuable. If it is something both good and new, a check for Ten Dollars will be sent at once. In submitting secrets address all communications to

Poultry Department of Farm Journal

Farm Journal for thirty years has conducted a poultry department known the country over for the ability of its editors and the value of its contents. Besides this strong section, which of itself makes the paper valuable to every chicken owner, its other departments are ably conducted and widely quoted. It is the standard farm and home paper of the country, with already more than three million readers. It is clean, bright, intensely practical; boiled down; cream, not skim-milk. Its editors and contributors know what they are talking about, and can quit when they have said it. It is for the gardener, fruitman, stockman, trucker, farmer, villager, suburbanite, the women folks, the boys and girls. It is illustrated and well printed on good paper. It has not a medical or trashy advertisement in it. Its more than half million subscribers pay five and ten years ahead—a very remarkable fact.

We will send you a copy of "Poultry Secrets" and FARM JOURNAL for 5 years, both for only

Mt. Sterling, Ky.

SILVER-GRAY DORKINGS AT THE LATE BOSTON POULTRY SHOW.

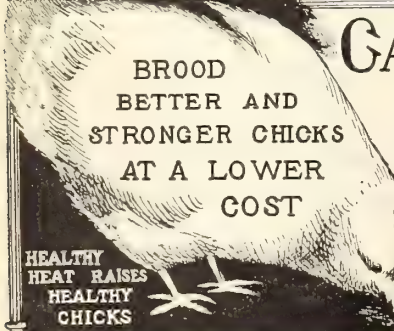

Perhaps nowhere in the United States is the Dorking fowl more admired and appreciated than by the people of Boston. These fowls, along with their many other excellent qualities, certainly do make a grand exhibition, and the management at this show has remembered them handsomely each year with valuable silver cups and cash specials. Boston for some years passed has become the rounding up place for the very finest Dorkings in the United States, and very often Canada as well. The total number of Dorkings shown this year was 79, which is very much below the usual number, but their extreme high qualities helped very largely to make up for the loss in numbers. I cannot do justice to these grand fowls in any description, but will make an attempt in a brief way.

Cocks (14). First, Jacobus, has very good size, sound breast and good, clean top color; comb is a little weak and he is too much pinched up in his form of breast, but still is a fine bird and wins. Second, Westfall, is extremely large, just fills his pen full; splendid body form, though possibly a little too high on his legs; is well beaten in color and comb is only moderately good. Third, Officer, is rather on the small side, quite good form and color except tail, which shows some white. Fourth, Hales, a good bird but old and not in best show condition. Fifth, Inches, is worth a higher position; did not appear to be feeling well, which may have put him back. Sixth, Westfall, a good type Dorking, has good size and form, but only moderate in color.

Hens (22). First, fourth, sixth, Jacobus; first, a well known very large old hen, shown in fine condition. Second, Inches, another old hen of equal size and not much to choose between them. Third, Officer, has nice size and form, though very moderate in color. Fourth, Jacobus, was lucky to get so high; has good color and short legs, but is small and has short back and body. Sixth, Jacobus, is again lucky; has good size, but fails in both form and color. Fifth, Inches, we liked real well, also pen 1022; same owner, and pen 1028, Westfall, a fine specimen.

Cockerels (11). First, second and fourth, Westfall, certainly three grand cockerels, penned in the pink of condition. First is a real model, with apparently nothing to criticize; grand size and form and exceptionally pure, clear color throughout; we don't remember ever seeing his equal. Second is very much on the same order, fully equal in size and form, just losing some on top color and full development of tail. Fourth has plenty of size and excellent pure, clear top color and breast, but not the perfect comb of the other two, and is some higher on the leg. Third and fifth, Hales. Third, a very good large cockerel, apparently not in good health and lacking in real fine show condition. Fifth is the New York winner, a very good Dorking but well beaten here. Sixth, Inches, not very good in form, a big, large-boned bird with stripy top color.

Pullets (13). First third and fifth, Westfall, three very fine pullets, possessing size, form and color. First is the New York winner, still in nice order and wins well; a very rare specimen. Third is not so large but has fine form and color, a real beauty. Fifth is exceptionally large, with very rare good color and body form, but as yet is some too high on the leg. Second, Inches, has nice size,

form and color, but we did not like her large white ear lobes. Fourth, same owner, and might easily have changed places; a fine large pullet that we liked. Sixth, Inebes, was a trim, neat pullet with best of color, but she unfortunately had a bad shaped comb and very badly formed feet and toes.

Mrs. Ida Kennedy of Youngstown, Ohio, showed a very nice pen and also some very creditable birds in single classes.

The American Dorking Club held its annual meeting during the show.

"Critic."

THE GREAT PHILADELPHIA SHOW

A Grand Quality Show, Cleverly Handled—Philadelphia Has Done Itself Proud and Honorably Won a Place in Line With New York and Boston As One of Our Three Best Shows.

By H. P. Schwab.

Philadelphia did not outdo itself, but it did itself grand, and has regained its place as a grand and successful exhibition—one of the best held in this country. We well remember the Philadelphia shows of the past, and have often regretted that for years no show was held in this city. The interest was always there and all that was missing was the right men to manage the affair. I believe they have been found at last. Previously two good shows were held, and this the third one, with doubled entries, with a large and beautiful hall located in the best section of the city, and with fanciers at the helm, bids well for the future, to say the least.

To Secretary Jefferies we take off our hat. He is a thoroughbred fancier, and understands the demands of his position fully. While he was most ably assisted by Vice President Moore, Treasurer Faucett, Superintendent Hickman and others, we are positive that all will join in giving Mr. Jefferies his just dues.

The exhibits were there in full force from several states, making the occasion a national one, and we fondly look forward to the next show to renew the acquaintances we made here. Harmony was the prevailing rule, all being satisfied of having their dues. They have the space now and next year we want to again see the entries doubled, assuring all that they can implicitly rely on getting their full share.

The classes as a rule were well filled. We were particularly well pleased to note the extra large entries in Brahmas, Dorkings, Houdans, etc. The American classes were the leaders, closely followed by the Mediterranean and English classes. Quality was the rule, and a win at Philadelphia carries with it a strong indorsement equal to the best. There is room in this country for a dozen shows of national importance, and there is the interest here to take care of them. The Armory, where this show was held, is in size only second to Madison Square Garden, well lighted and is in the residence portion of the city. The attendance doubled all former exhibits. Sales were a feature, and several that came under our personal notice were of some class.

Philadelphia, the second largest of our cities, is an interesting one in several ways. It is here that the Declaration of Independence was signed, and we were one of a party to visit Old Independence Hall, see the bell that tolled out the glad

F. E. Wilson, R. R. 1, College Hill, O.

tidings over a hundred years ago, and also found that there was much to interest one here besides the bell. Carefully preserved are the chairs the Continental Congress used. The speaker's table, the ink stand and many other relics of great historic value.

Some of the Men and Birds We Met.

Mr. H. M. Kenner, manager of the Chestnut Hill Farm, was a happy man, winning first cock and cockerel, a silver cup, and several other prizes, with his string of Barred Rocks. Their first cock was all that we could desire, as also was their winning cockerel. When we consider this competition, it is a record to be proud of and speaks in the highest possible terms for this line. Their fourth pullet, when fully finished, will be a beauty. He won the club cup for best cock, hen, cockerel and pullet, with good mention on each. Mr. Kenner has bred Barred Plymouth Rocks for a great many years, and evidently knows them from

belongs to Miss Baker) won on Barred Rocks second hen, third pullet and second pen on grand birds well shown.

Mr. B. B. Ware won third cock on a good bird that only failed on condition; he was not ready. He brought along a cockerel to show the boys Barred Rock color; this he did with a wonderfully colored bird, shown rather young and having met with an accident in having the rear of his comb cut by the wire netting in his house.

Mr. S. S. Bossart was there with a full hand. His birds show exceptional quality, in particular his male line, but this show did not come right for him, his best having been shown before and won, they were out of their best form here. Such stock should be held back for this kind of a show. It simply won't do to overshow birds and then expect them to win in this kind of competition.

H. B. Cooper, Jr., won first pullet and got busy quickly, decorating the coop

WHITE PLYMOUTH ROCK.

One of the winners at the late Cincinnati show. Bred and owned by S. M. Dickinson, Granville, O.

A to Z. He reports a choice line of stock on hand. This was not their first win here; they have won well here before and at a great many other shows. Their line is well known and well thought of.

Pine Top Poultry Farm made a great showing of their specialties and incidentally a great win with their Barred Rocks and S. C. White Leghorns. They won on Barred Rocks second cock, first hen, third and fifth cockerel, second and fifth pullet and first breeding pen; silver cup for best display, color, male special and several others. Their first pen male is a wonder in color and barring and shown in the best possible condition. The females were just right and evenly mated all other birds described in their classes. In S. C. White Leghorns Pine Top made their mark as it has never done before by making a clean win of all five first prizes in the largest and strongest class of Leghorns shown. Their birds are superb, showing strongly condition and elegant size and form. Manager Winchell was a busy man every moment, while Owner John H. Hallock came over from New York just long enough to see the show and meet with the boys.

Mr. Robert Baker (we think the credit

and in doing business. Cooper will get business if there is any to be had.

Mr. and Mrs. S. M. Goucher were interested exhibitors at this their first attempt. They will be back again, and will bear watching.

White Rocks were a good class here. J. D. Koons won fifth cock, second hen, first cockerel and first pullet—a good winning, on splendid birds. The first cockerel was just right and of grand type; first pullet chalk white and a gem in shape. Mr. Koons also won the cup and A. P. A. medal and several other prizes.

Fairfield Poultry Farm won first cock and hen, second and fourth cockerels, fifth pullet, two cups and other specials, a record proving this line. The first cock was well shown and is a real hot bird.

Paul G. Springer won second and third cocks and third hen. His line was good all through. The third hen is a grand specimen, but here was just a mite past her best show form. Mr. Springer also breeds Pekin ducks, winning two first and one second prize. At the late New York show he won second and fifth on old and first and second on young Pekins.

To G. D. Tilley fell first White Rock

pen, third cockerel, etc. The first pen was well matched and headed by a very strong cockerel of type and color.

In Buff Rocks the class was small, the quality being very good. Good heads were noted here, in particular the male heads. The first pullet we thought a star.

White Wyandottes, as is usual here, came out strong and in good quality. The birds were as a rule in splendid condition, and while some types of various kinds were shown, there were more than enough good ones to more than make it interesting for all.

Mr. A. J. Fell fell right into it by winning first cock, hen and cockerel with a choice line of birds. There were other hot ones also that must have run the winners a hot chase. The first pullet was very neat and the first pen well done in every detail.

Silver Wyandottes. In our travels this winter we found strong classes of these at all shows and this one was no exception to the rule.

The Birds As Seen—Light Brahmas.

A grand class of extra quality; finish was evident here, and markings of the best.

Cock. First, grand size, good form and elegant hackle and all markings. Second, very similar. Third, good head and well toe feathered.

Hens. First, a beauty in form and choice head, very good hackle. Second, well feathered and close up. Third, similar. This hen has a beauty wing and tail.

Cockerels. First, a well matured bird and a Brahma every inch; he stood up well. Second, another good fellow, grand in both color and markings. Third, a well done bird, with extra neck.

Pullets. First, the gem of the class, finely shown and of rare quality. Second, very similar, both of these with rare clean and well marked necks. Third, another good one in every way.

Pens. First, a beauty in evenness of quality, the toe feathering conspicuous, the male here of very strong type.

Black Langshans.

A good sized class and splendid birds. The type was extra as a rule. Color sound. The first and second cockerels were the very best in quality.

Barred Plymouth Rocks.

Barred Rocks brought out the usual strong class seen here. The winners were without exception high quality birds, with several more quality birds in every class.

Cock. First, a well finished and typical bird, with an exceptionally clean and bright shade of color, narrow barred and with good head, etc. Second, not so well finished and with a half shade stronger color, fine head and elegant legs. Third, close up in every quality, not shown at his best here.

Hens. First, a hen of wonderful color and style of barring. Tail not fully grown, and just a mite short in body; a strong winner and great hen. Second, a grandly barred bird and fully finished; leg color rather light. Third, good type and color; a very choice hen.

Cockerels. First, a grand bodied bird, just a little up on legs, well finished, narrow and strongly barred, way down, beautiful comb and strong eye. Second, another beauty in form and extra in color, good clean barring, tail not at its best. Third, a choice bird, not fully conditioned; barring and color very nice. No. 112, cockerel, a bird of choicest color and barring, a trifle young and back of comb badly cut by coop wire.

The Fire-Fly Egg Tester

An electric egg tester that is practical and durable. Dark shelled eggs tested as easily with the Fire-Fly as white eggs are with a lamp tester. Omi Canker Cure. Guaranteed. 25c by mail prepaid. Write for circular.

Pays for one year's subscription to American Poultry Journal and a copy of "How to Build Poultry Houses—A 64-page book on poultry house construction."

Pullets. First, a fine shade of color and very clean cut bar, strong eyes and well finished. Second, one of the best when fully done, her color and markings extra. Third, grand in barring and of good form, legs weak.

Pens. First, a choice, well mated pen of high and uniform quality; the male here the beauty of the class and winning the color special. Second, a strong pen, females a little young; male in good shape and color.

White Plymouth Rocks.

Cock. First, extra good type and size, sound color and good head. Second, close

not quite at her best. Third, a rare bird of the best type.

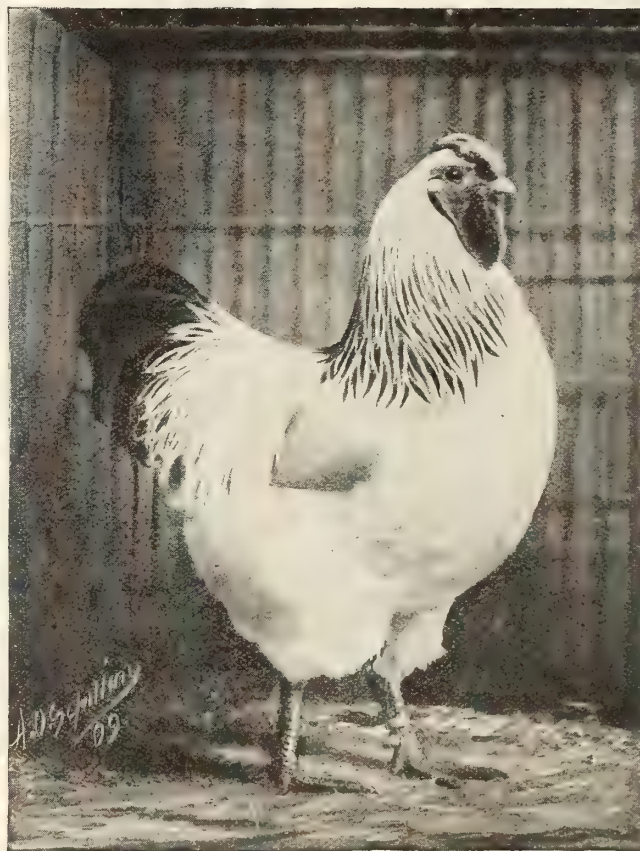

Pens. First, well mated and in fine show form. Second, close up in every quality. Third, very well placed; probably not as well placed as they should have been.

Buff Plymouth Rocks.

The class rather small for this variety. The winners were strong birds of good, sound color. We must have more Buffs here next year.

Silver-Laced Wyandottes.

This was a good, hot class all through,

FIRST PRIZE COCK, MADISON SQ. GARDEN N.Y. 1908-9
BRED AND OWNED BY,
ROCK HILL POULTRY FARM
OSSINING N.Y.

up, with rare quality. Third, grand eye and leg color, with good head points. Other birds placed here very good.

Hens. First, a high quality bird in every way, excellent type and well shown. Second, grand in shape and color, not shown at her best form here. Third, a grand, large hen of sound color and very good type.

Cockerels. First, grandly finished and in the best of condition; a good winner. Second, another good one of rare quality, but not as well done as the first. Third, a good bird, with only fair comb; color excellent.

Pullets. First, she just filled the bill in every way; grand in type, color and finish. Second, another good one, but

well balanced and strong in numbers. The cocks and in particular the winners were of extra quality, type being a feature. The hens were close up and a very even lot of birds. The winners of first, second and third were close up in every quality. — Cockerels showed particularly strong, the winner with a grand breast and well marked hackle. The other winners were very hot ones, with shape strong. Pullets, like the hens, were out in force and of good type, well finished and with good head points. We thought the winners well placed here.

White Wyandottes.

Cock. First, a good Wyandotte in shape and color, well shown and with extra good head. Second, another real

good bird, very close up, color and condition very good. Third, a well done bird, grandly placed.

Hens. First, grand in type and condition. Second and third, close up and well finished. There were other hot ones in this class—birds of the best type and shown, as we thought, just right.

Cockerels. First, a large bird, holding type well. Second, somewhat smaller, but very typical and with grand shaped back and breast. Third, not as good in type as the other two; several more hot ones here.

Pullets. First, a good bird, full of promise. Second, very neat. Third, good all around.

Pens. Were a strong class; most of them shown at their best; type and extra choice mating were the features.

Rhode Island Reds.

Single Combs. Here was a good class in both size and quality. Type as a rule was excellent. In these color is progressing, and the number of rare colored birds here was good to see. We thought the winners well placed and congratulate Judge Tracy.

Rose Combs. They also came out well. Somehow we think that these for color are getting the best of the single combs. Be that as it may, they surely were ahead at Boston and here.

Dorkings.

Dorkings in their varieties were well shown in good numbers. We have seen good classes of these at all shows this winter.

Orpingtons.

Orpingtons were here shown in all their splendor, the Buffs and Black varieties showing in grand numbers. Type and head points were the feature here. We would like to describe these classes fully, but found so much difference here, and feeling displayed, that we will pass on.

S. C. White Leghorns.

This was one of the quality classes of the show, competition here was hot, and the awards well placed.

Cock. First, a grand sized bird of excellent type, finished to the day. Second, very good and well placed. Third, trim and of rare quality.

Hens. First, the Star; shown at her best and a great winner; it is seldom we see one as good as she. Second, somewhat similar, good size and a very hot one. Third, finely shown and well finished.

Cockerels. First, one of the best we have seen this year, trim in every way, beautiful head and nice size. Second, grand type and very good head. Third, close up, a good, strong class all through.

Pullets. First, a beautiful pullet, shown just right and with the best of quality. Second; this one looked very good to us, of fine type and size; it takes a warm one to beat this kind. Third, was very nice.

Pens. First, well placed and in this condition capable to win at any show; grandly mated, of good size and extra head points. Second, another great pen, well matched. Third, very close up and of great quality.

Buff Leghorns were a small class, but the surprise of the show was the Brown Leghorn entry. This was very small for this variety here.

S. C. Black Minorcas were a class of sixty birds. Competition was strong here in every class. Type prominent and color of the best. The awards seemed to be well placed and the judging gave general satisfaction. Several specially

fine birds were shown here, with head points good.

Houdans were another good class and the quality was all we could wish for. Polish were shown in fair numbers in all classes, while Andalusians mustered a good class. Games were in evidence here, great birds being shown, the White Indians being the strongest in numbers.

Bantams were rather small classes all through. We look for more of these attractive little fellows next year.

Turkeys, ducks and geese were shown in all varieties and in fair sized classes, with plenty of quality. It remained for the pigeons to surprise the natives and others. Something over 1,300 were shown, making one of the largest and best classes we have ever seen.

The display of eggs was a feature and Superintendent Hickman had his hands full looking after the wants of these exhibitors. They are nearly as bad as the red men.

Shove's Rhode Island Reds and Houdans

Are always in demand by those who are looking for good stock either for breeding or for exhibition. Eggs \$2.00 and \$5.00 for 13. Also breeding Toulouse and Embden Geese, Bronze Turkeys and Pekin Ducks. Send for circular. **DANIEL P. SHOVE, Fall River, Mass.**

Racine, Wis.

Planet Jr.

Does six men's work quicker, better, and far cheaper than old-style back-breaking gardening methods. Saves seed and insures a bigger, better yield.

Be modern. Use Planet Jr. Seeders, cultivators and wheel-hoes, because they are made by a practical farmer and manufacturer who knows what is needed to lighten your labor.

No. 6. The newest Planet Jr. Combination Hill and Drill Seeder, Wheel Hoe, Cultivator and Plow. Opens the furrow, sows any kind of garden seed accurately in drills or hills, covers, rolls down and marks out the next row—all at one operation. Also a perfect Wheel-Hoe, Cultivator and Plow.

No. 12 Double-wheel Hoe has adjustable wheels so that it works equally well astride or between rows—insures close work and does away with hand-weeding.

There's a Planet Jr. for every farm and garden use—45 kinds in all. Our 1909 free illustrated catalogue describes them fully. Write for it today.

Ready Roofing

Galvanized RUBBER and ASPHALT

An entire lot of factory 'mill ends' of prepared roofing, strictly high grade, brand new at less than cost of manufacture. Two or three pieces of galvanized rubber or asphalt roofing in each roll of 108 square feet. This is \$2 and \$3 grades of roofing; it is made of wool felt, thoroughly saturated with water-proof composition of rubber, after which it is coated with hard rubber composition and galvanized between heavy iron rolls. It is suitable for all climates, all ready to lay. Only tools needed a hammer and jack-knife. This roofing will impart no taste to rain water and can be laid over old shingles. We guarantee every roll as represented, or money back.

Steel Roofing

Only \$1.50 per 100 Square Feet

We have 50,000 squares of Steel Roofing, size 2 feet 6 inches wide by 5 feet 6 inches long, (30 inches by 66 inches) at this price. These sheets were used about 30 days in connection with the manufacture of soap. They were never exposed to the weather or nailed.

Every sheet is clean and free from nail holes, and practically as good as new. It is extra heavy, from 24 to 28 gauge. Every sheet is given a coat of our red "Gelatin" on both sides. It is a new discovery in paints and prevents rust.

Flat, per 100 square feet, \$1.50. Corrugated, per 100 square feet, \$1.75. Will last longer than light weight Galvanized Roofing. Just the thing for Barns, Warehouses, Factories, Sheds and Buildings of all kinds. Also for ceiling and siding. Satisfaction guaranteed or money back.

PLUMBING AND HEATING MATERIAL Direct to the Consumer at Factory Prices.

Our perfect ALL IRON PIPE system of plumbing will enable any handy mechanic to install the material on farm or in city.

Send us a list of your needs, or if you cannot tell what you need, draw up a floor plan of your house and send it to us and we will figure up everything you need, free, and this class of work. Soil pipe, lead and water pipe and fittings of all kinds, etc. This sort of material can be easily installed

give you a list of it. All we ask is an opportunity to figure on your wants. We carry everything necessary for installing in an old building.

CATALOGUE No. 167 of bargain building material, including pipe and fittings, bathroom and plumbing supplies, heating apparatus, home water supply systems, poultry netting, wire fencing, etc., FREE. Your name on a postal card will do.

CENTRAL MACHINERY & SUPPLY CO.

2569-99 Archer Avenue, Chicago.

INDIANAPOLIS, IND., HAS ANOTHER SUCCESSFUL SHOW.

By C. W. Zimmer.

The Fanciers' Association of Indiana held their ninth annual exhibition in Tomlinson Hall, February 1-4, 1909. The hall was crowded to the limit, everything was double-decked and we understand entries had to be returned. The only thing that prevents Indianapolis from having a great big show is they haven't any larger room to hold it in. But it is a good, big show, for all that, and they certainly have the quality.

The Barred Rock prizes were split up so nearly everyone got something.

In White Rocks J. H. Trobaugh, Delphi, Ind., had a fine display pen that showed great quality in both color and shape. In the open class Mr. Trobaugh won third pullet, fifth hen. Edward Beasley & Son, of Thorntown, Ind., also breeders of White Rocks, won second cockerel (a very good bird) and fourth cockerel.

The White Wyandottes were a good class in which George Barkdoll exhibited one pullet, winning second place. Mr. Barkdoll intended showing more birds, but was prevented, owing to an accident.

The Rhode Island Red class was hot, as usual. A sensation was created in the R. C. class by the exhibition of some remarkably fine specimens of this variety by C. L. Buschman, Indianapolis, Ind. Mr. Buschman calls his birds "Non-Fading" Reds, and he has the deep red color as well as oblong shape that is required by the Standard. He won first pen, first cockerel, first pullet, second cockerel, silver cup for best exhibit and special color on pullet. The cockerel was not fully developed in tail, which prevented his getting first (so said the judge), and an offer of \$100 was refused for this bird.

Mr. Buschman has hens two and three years old that "have not faded yet," and he believes he has by his breeding produced a strain of "Non-Fading" Reds. He has a good start in this direction, and may the good work go on. Mrs. Buschman is also a "Red Enthusiast," and was always to be found in the Red alley. With her pleasant smile and winning way she made many friends. She was always ready to talk Reds and show their birds. We regret there are not more ladies like her to be found in the show room.

The Lordly Light Brahma was out in goodly numbers and as good in quality as we ever saw. The exhibit of the River Home Poultry yards, Perrysburg, Ohio, was in charge of F. J. Stamm. They won first, third and fifth cockerel; first, second and third hen; third cockerel; fourth and fifth pullet.

E. J. Barker, Thorntown, Ind., won on Light Brahmas fourth cockerel, third hen, fourth and fifth cockerel, first pullet, first and fourth pens.

We also found extraordinary quality in the S. C. Black Minorcas exhibited by E. C. Wilson, Indianapolis, Ind. Particularly was this true of his first-prize hen, a typical Minorca in type, weighing 8½ pounds and scored 96 points. A prominent judge announced her the best he had ever seen. Mr. Wilson has been winning in hot company for a number of years and has won over 100 prizes this year. His

winnings were third and fourth cockerel; first, third and fifth hen; third cockerel; third and fifth pullet; second pen.

One of the sensations of the show room were the Partridge Rocks exhibited by S. A. Nofztger, North Manchester, Ind. Mr. Nofztger is the originator of the Partridge Rock and he ought to have good ones. Well, he has, and he has been "at it" ten years and he has as good, uniform quality in this new breed as is to be found among the older breeds. He won at the recent Chicago show, also the Indiana State Fair. His winnings here were first, second and third cock; second and fifth hen; first, second and fourth cockerel; first, second, fourth and fifth pullet; first pen.

In Buff Leghorns we found the "Great and Only" Peter S. Hurt, of Thorntown, Ind. He was "All Smiles," as usual, his eyes shining like two electric lights on a dark night. But that's all right, he can "See" color and shape when it comes to a Buff Leghorn, and he "grinds" them out to "Perfection" down Thorntown way. He won at Indianapolis, of course. Why he's been (or, rather, his birds have) to Boston. Here he captured first and fifth cock; second hen; second and fourth cockerel; second pullet; first and second pens.

They have the correct system of "Doing Things" at Indianapolis. They have Empire coops, and you know that makes a fine show. The room was profusely decorated in flags and presented a handsome appearance. The birds were placed in the coops promptly and well cared for, the room was kept clean. There were sufficient judges to do the work and all awards were up Wednesday noon. All cash and special premiums were paid on Friday. The attendance was good every day. On Thursday there were 2,500 paid admissions, which was 700 more than the largest day last year.

The American Poultry Journal wishes success to the Indianapolis show.

THE GREAT CLEVELAND SHOW.

By C. W. Zimmer.

The Cleveland (Ohio) show was bigger and better than ever. The large Central armory was filled to overflowing and part of the exhibit had to be double-decked. The weather was fine until the last day of the show, when a blizzard came on which, even then, did not keep the crowds away. There were crowds and crowds of people there. We understand 4,000 people visited the show on Thursday alone. The exhibitors came from the east, west, north and south. No distance seemed to be too great. Everybody seemed to be there and everybody seemed to be in good humor. Cleveland also had a cat and dog show as well as pigeons in connection with the poultry.

The Barred Rocks were a good class, in which a "dark horse" came in and captured a couple of the coveted prizes. Schwab Bros., Irondequoit, N. Y., had some grand birds, being good in type and that bright, snappy barring so much desired and seldom produced. They won first and second cock; first and fourth hen; second, third and fifth cockerel; third pullet. Mrs. L. E. Simmons, Chicago, Ohio, also exhibited some fine Barred Rocks, winning second hen,

PLANE'S S. C. WHITE LEGHORNS

won three silver cups at the Northern Illinois Show. Send for egg circular. Some extra good pens mated up. JOHN C. PLANE, BELVIDERE, ILLINOIS

Mating List Now Ready

Buff and Black Orpingtons, Rose and Single Comb Reds and Buff Rocks.
Eighteen grand yards.

CRAIG & MAPES Mt. Lebanon, Pennsylvania

S. C. Buff & Brown LEGHORNS

Farm raised. Won thirteen blue ribbons at Missouri State Show and Fair, 1908. M. B. Turkeys, yearling toms, 50 lbs.; hens, 25 lbs. Eggs \$1 each. Indian Runner Ducks. Eleven eggs \$1.50.

Mrs. H. R. Schlotzhauer, Spring Valley Farm, Pilot Grove, Mo.

Barred Ply. Rocks

Winners of a long string of ribbons at Polo, Ottawa and Princeton, Illinois this winter. A few good cockerels for sale, scoring as follows: Two scoring 9034 at \$5, four scoring 91 at \$7 each, one scoring 9114 at \$8. Eggs from the winners, the best matings we ever put together, at \$3 per 15, \$5 per 30, \$7 per 45. A good hatch guaranteed. Mating list for the asking.

S. L. CORK Barred Rock Specialist Peru, Illinois

Foster's Black Orpingtons

Another grand winning at the great Northern Indiana State Fair, with my famous "Duke of Kent," strain of S. C. Black Orpingtons. I won first, second and third on cock; first, second and third on cockerel; first, second and third on hen; first and second on pullet; first and second on breeding pen and special premiums on the best shape and color male and best shape and color female in the entire show. Write for beautiful chromo of "Duke of Kent" sent free and price list of stock and eggs of this strain that has no equal.

D. N. FOSTER, R. R. 7, Fort Wayne, Indiana

S. C. REDS ZIMMER'S RED-RAVEN STRAIN S. C. BLACK ORPINGTONS

Breed from Madison Square Garden Winners. Some fine Orpington cockerels for sale. Two fine pens of each breed mated by Judge C. W. Zimmer to produce exhibition specimens. If you want to win, let us book your order for eggs now.

H. F. KENNERK R. R. 7 Fort Wayne, Indiana

C. L. Buschmann's R. I. REDS Non-Fading R. C.

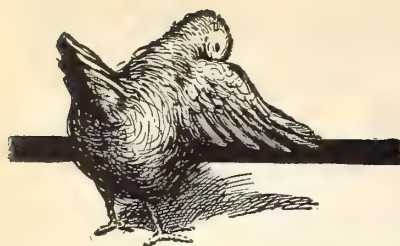

LAYERS, THE YEAR ROUND—At Indianapolis show, February 1909, in very strong competition first pen, first and fourth cock, first pullet, second cockerel, fourth and fifth hen. R. I. Red Club's silver cup, color special on female. Eggs from all prize winners, also from utility stock and others. I am breeding non-fading R. I. Reds. See my \$10.00 offer.

C. L. BUSCHMANN, 4939 N. Meridan St., Indianapolis, Ind.

BUFF WYANDOTTES

THE NOTED PISER STRAIN—Win at Cleveland. I won four premiums including first pen on six entries. I have been winning for the past five years. At Greenwich, Ohio, I won nine regular and two special prizes. At Plymouth, Ohio, on seven entries won five firsts and all specials. These winnings should convince you. I have the quality you are looking for in stock or eggs. Order early. Write today.

T. K. MARTIN Chicago, Ohio

LICE and mites, ticks and fleas are a grave menace to bird and beast. The surest, quickest, safest way to get rid of these pests is with

Pratt's LICE KILLER (Powdered Form)

Of unequalled strength and efficiency, it promptly and permanently destroys all vermin on poultry, horses, cattle, hogs, sheep, dogs and cats. Goes twice as far as other preparations—therefore most economical.

Use Pratt's Liquid Lice Killer for spraying the chicken house, roosts, etc. Very strong and penetrating.

Pratt's Head Lice Ointment for little chicks makes the raising of little chicks easy.

If your dealer cannot supply you, send 10 cents for the Ointment, and 25c. for the Powder to Pratt Food Co.

Send for Pratt's New Poultry Book, Free.

fourth cockerel, fourth pen and special on pullet.

Melroy & Webster exhibited some fine Partridge Rocks, winning first cock, first and second hen, first and second cockerel, first pullet, first pen.

The Columbian Wyandottes was a good class, in which H. G. Fish, Columbia Station, Ohio, exhibited some very fine specimens, winning first and third cock, first and fourth cockerel, second hen and first pen. Mr. Fish also reports winning at the Cincinnati show first and second cock, second and fifth cockerel, fifth hen, second pullet and first pen.

Ira C. Keller, Prospect, Ohio, made quite a winning in Silver Wyandottes, taking first cock, second hen, first cockerel, first pullet and second pen, and in Golden Wyandottes Mr. Keller won first

erel and third pullet. Ira Crowther, Willoughby, Ohio, also exhibited some fine S. C. Reds, showing fine red color, with good black markings, winning fifth cock, third hen, fourth pullet and second and fourth pens. He had an unplaced cockerel that was probably left out because he was not matured, but he certainly had good color and a fine wing. In Rose Comb Reds the Ridge View Farm, Willoughby, Ohio, won first and second pens in a very hot class, the first pen being the same that won first at Kansas City and pronounced to be one of the finest pens shown this season. They also won second hen, third cock, third cockerel and third pullet, as well as several cups. Mr. Clark, of Ridge View Farms, had a very attractive special exhibit, consisting of high-class

Prize-winning Rose Comb Black Minorcas as bred by Lloyd C. Mishler, North Manchester, Ind.

cock, first hen, third cockerel, third pullet and first pen.

The competition in White Wyandottes was keen and Charles McClave, New London, O., made quite a winning. He got second and fourth cock, first and second hen, fourth cockerel, first, second, third and fourth pullet and third pen.

The Buff Wyandottes were a good class, in which T. K. Martin, Chicago, Ohio, won fourth cock, second cockerel, fourth pullet and first pen.

The Rhode Island Red class attracted more attention than any other class in the show, and they were there in goodly numbers and quality as well. The Red men are an enthusiastic bunch, because they know they have one of the best breeds, and many an argument was had that came near being "red hot." In Single Combs, George L. Buell, Lorain, Ohio, won the cream of the prizes, getting fourth cock, second, third and fourth cockerel, second pullet, first hen, first pen and the state cup donated by the R. I. Red Club of America on best display. Mr. Buell also reports that on two entries at Chicago he won first cock-

Rhode Island Reds, Columbian Wyandottes and a breeding pen of White Orpingtons. The male bird of this pen was quite the sensation of the show, being declared the best shaped male exhibited and one of the best shown anywhere this year. Mr. Clark has recently taken up the White Orpingtons. His farm at Willoughby is devoted to poultry and about 3,000 chickens are raised each year.

In the Buff Orpingtons Mr. Chas. H. Switzer, proprietor Roselawn Poultry Farm, South Euclid, O., made quite a killing by winning eight prizes on nine entries in a hot class, as follows: Second, fourth and fifth on cock; first, second, fourth and fifth on hen, and second on pullet. Mr. Switzer's birds showed fine Orpington type and that soft buff color so hard to breed. Mr. Switzer has, however, been winning at Cleveland for the last four years.

In the Black Orpington alley we found Wm. Cook & Son, of Scotch Plains, N. J., Mr. Percy Cook being present. Here we saw Orpingtons from the originator's hands and we were not disap-

pointed, for we found quality far above the average. In Blacks they won third on cock, second on cockerel, first and third on pen. In White Orpingtons they won fifth on cock, third on hen, first and second on cockerel, second on pullet, first and second on pen, and in Buffs they won third on cock, first on pullet, third and fourth on pen. Messrs. Cook & Son also exhibited a pen of Jubilee Orpingtons which attracted considerable attention.

The Anconas showed their fast growing popularity by the greatly increased entry, which consisted of about 50 birds, which came from different parts of the state. It was a very strong class and made a grand showing, as many birds were of extra good quality. Sheppard's famous Anconas of Berea, O., were at the front, winning seven first prizes in the Single Comb and Rose Comb classes. The first and second cockerels which were exhibited by Mr. Sheppard were much admired by the Ancona fanciers on account of their handsome shape and unusual quality. Some of the Ancona critics pronounced them the best they had ever seen.

Chas. McClave was there with his usual string of water fowl, which includes about all varieties of ducks and geese, in which he won nearly everything. Charley also showed turkeys and two pens of pea fowl, which attracted considerable attention with their beautiful plumage.

The Conkey booth, where was exhibited the Conkey remedies, was tastily gotten up and we noticed lots of breeders stopped in there. The A. I. Root Company, Medina, O., had an exhibit of honey that the "bees made," also of hives and all things pertaining to the bee business. A one-frame glass hive of bees was quite an attraction, and many a look was taken for the queen bee. Then we came to the Root incubator booth. Here we saw that queer looking incubator with shelves in it. Well we confess before we saw it and understood how it worked we belonged to the doubting Thomases, but after we thoroughly understood it we see how it works. It has an even temperature even with one shelf above the other. We believe it is all right and should like to try it. This incubator was one of the wonders of the show and attracted the attention of every one. The Root Company has been making the Root Contact Heat Brooder for several years past.

In conclusion we will say the show was a grand success, and much credit is due the officers of the Cleveland Fanciers' Club; especially is this true of the secretary, J. T. Conkey. We were treated courteously by all and shall carry with us many pleasant remembrances of the Cleveland show.

Before setting any hens I dip them in a preparation called "Creso," which can be purchased at most drug stores. Full directions are given on the can. This kills all lice and allows them to enjoy their nest of eggs, which has been carefully prepared for them. The nest is made of three layers. First, ashes, dry earth and straw. Wood ashes keeps away parasites. The earth retains heat and moisture and the straw affords comfort.

Sour milk and butter milk are excellent food for all kinds of poultry, especially turkeys, ducks and geese. When thickened with shorts, bran or meal, it is a very nourishing diet for young fowls.

YOU DON'T PAY A CENT!

If Conkey's Roup Cure fails it costs you nothing, for it is guaranteed to cure even the advanced stages of Roup. If the results are not satisfactory, simply return the empty box and back comes your money!

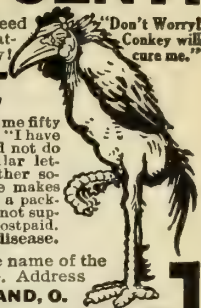

Conkey's ROUP CURE

A powder that is given in the drinking water. It acts as a preventive and is a fine tonic. A germ killer that is absolutely harmless to fowls.

Save your sick fowls! Prevent the ravages of Roup! Protect your profits! It's the original and only successful Roup Cure. Used all over the world. Saves poultry raisers thousands of dollars every year. One man writes: "I believe that

every 50-cent package I buy saves me fifty dollars in birds." Another says: "I have used it for six years and would not do without it." Hundreds of similar letters prove its superiority to other so-called cures. A 50-cent package makes 25 gallons of medicine! Get a package at your dealer's, or if he cannot supply you, we will! Large size \$1, postpaid. We make a remedy for each disease.

THE CONKEY BOOK (Price 25c) Sent FREE if you give us the name of the man from whom you buy your poultry supplies. Enclose 4c postage. Address **G. E. CONKEY CO., Dept. F, Conkey Laboratories, CLEVELAND, O.**

THE GREAT WASHINGTON POULTRY SHOW.

The Washington Poultry and Pigeon Association held its annual poultry show at the old Masonic Temple January 26-30, 1909. It was one of the most successful shows ever held in Washington. The display of birds was one which brought forth much favorable comment. I believe everyone who visited it went away well pleased with the show and also with a better knowledge of the feathered family than that which they had before visiting it.

Exhibits were there from several different states, some as far away as Massachusetts. A decided improvement was noticed in almost every class. The Barred Plymouth Rocks, as usual, were in the lead, with several close competitors. The Buff Orpingtons had made the greatest gain of any one class. There isn't the slightest doubt but that the appearance of the display and the quality of birds on exhibition were a great improvement over that of previous years.

There were a number of distinguished visitors present, among them being Secretary of Agriculture Hon. James Wilson.

It seems to be an inevitable fact that the managers of the show will have to get a larger room for the exhibition next year. Every particle of space in the large hall used this year was filled. There isn't the slightest doubt but that the show is going to grow under the present management. I believe the time is in the near future when the Washington Poultry Show will be looked upon as the leading show of this part of the country, putting it in the class with New York and Boston.

The series of free lectures, illustrated by the use of lantern slides, given each night by Secretary of Agriculture Hon. James Wilson, Dr. N. W. Sanborn, of Massachusetts, and others, proved to be very interesting and instructive to poultry raisers. Many of the breeders were eager to take advantage of this course of instruction.

I think from every point of view the show was a decided success. It is certainly destined to be a great show.

Thos. D. Gannaway.

Washington, D. C.

THE BUFFALO SHOW.

When the great Poultry Show in City Convention Hall closed on Saturday night, February 6, Buffalo had added to her already great fame as a convention city the enviable record as one of the foremost show cities of America.

The attendance throughout the week was extra good, and the show was a grand success in every way.

Remembering that this was only the second annual show for Buffalo, it was indeed gratifying for the management to see such a large entry and good attendance.

The twelve judges finished their work very satisfactorily at 10 o'clock Wednesday morning, and at 9 o'clock Wednesday night the marked catalogues were on sale. The premium cards were put up immediately after the judging and the visitors were very profuse with their commendable remarks for the management of the show and George H. Burgott, superintendent of poultry; Charles E. Lang, superintendent of pigeons; and Mrs. Butterfield, superintendent of pet stock and canaries.

The Buffalo papers helped materially

in bringing out a good attendance, and it truly was "chicken week" in Buffalo, a week which will be set aside annually by the city in the future.

The strict quarantine shut out a large Canadian exhibit that had planned on coming over.

The management of this show, backed by the Chamber of Commerce, the newspapers, and hundreds of leading professional and business men, guarantees next year a better and bigger show, for their slogan is "Better and Bigger."

POULTRY POINTERS.

By Grace Eby.

A pound of poultry can be grown at less cost than a pound of beef, and is worth more.

Keep the poultry houses clean, and give them an occasional whitewashing and your fowls will not be bothered by lice.

My good White Plymouth Rock hens lay well in winter. All I have to do is to remark in their hearing that eggs have dropped down to 15 cents a dozen.

A good dry poultry house, when we have showers, is an important requirement. Many diseases often originate through dampness produced by a leaky roof.

The homeopathic remedy for roup, with its characteristic cough, tenacious mucus about the beak, with difficulty in breathing, is to give aconite. One drop of aconite in a gill of water given to the sick bird to drink.

Save the feathers; geese feathers are always high and duck feathers are worth almost as much. Turkey tail feathers bring from 30 to 40 cents per pound, being used in making feather dusters. Even chick feathers are worth saving, although they sometimes get down to 5 cents per pound. The white chicken feathers are worth 30 and 35 cents per pound.

MOTTLED ANCONAS, large, healthy, handsome birds, splendid plumage, wonderful winter layers. Eggs from prize winning stock, \$1.50 and \$2 per 15. G. H. Hubbard, Lock Haven, Pa. 3-3

SILVER SPANGLED HAMBURG exclusively. J. L. Brown, Box 410, Kearney, Neb. 3-09-19r

FOR SALE—8 Cornish Indian Game hens, 6 pullets, 1 cock, 1 cockerel, for \$16. Eggs for hatching Buff P. Rocks, \$1.25; and S. C. B. Leghorn, \$1 per setting. Adolph Todd, Wilton Junction, Box 343, Ia. 3-3

WHITE WYANDOTTES EXCLUSIVELY. Eggs from prize winning females scoring 94 to 96, \$1.50, \$2 per 15; \$3 per 30. Incubator eggs, \$5, 100. Mrs. H. P. Middleton, Vandalia, Mo. 3-1

S. C. W. LEGHORNS. Chicago, Jan., 1907, 1st, 3rd and 4th cocks; 1st and 2nd hens; 1st, 2nd, 3rd and 4th cockerels; 1st and 2nd pullets; 1st pen. Stock and eggs for sale. Dr. R. C. Coates, Thamesville, Ontario, Canada. 3-3

THE BUFF ROCK BOOKS. Tell and show the goodness in my pens. Eggs, \$2 per setting. Guaranteed hatch. C. Lester Duff, Clay City, Ill. 3-3

"ADIRONDACK" S. C. WHITE LEGHORNS "soar above them all." Ten high-scoring pens of breeding stock. Eggs for hatching, \$1.50 for 15. Special prices on large lots. Order directly from this ad. Breeding stock for sale. Send two 2-cent stamps for handsome catalogue, worth dollars. Orchard Grove Poultry Plant, Cohocton, N. Y. 3-3

ROSE AND SINGLE COMB Rhode Island Reds. Large, dark, even colored birds. Bred for business but hard to beat. Forty premiums the past two seasons. Eggs, \$1.50 per 15; \$7 per 100. Stock reasonable. Pleasant Hill Poultry Yards, Athol, Mass. 3-1

ROCK HILL BIRDS AT THE NEW YORK SHOW.

At the late New York show, Rock Hill Poultry Farm, Ossining, N. Y., showed some grand specimens in Columbian Wyandottes and won first cock, third cockerel and first hen. This is certainly "going some," when the quality and class at this show is taken into consideration. On Partridge Wyandottes they won third pen. On Silver Penciled Plymouth Rocks they won 1st, 2d, 3d cock; 1st, 2d hen; 1st, 4th cockerel; 1st, 3d pullet; 1st, 3d pen. Mr. Corey, who is manager of this farm, is certainly entitled to a great deal of credit for the efforts he is putting forth in behalf of the Silver Penciled Plymouth Rocks. They are certainly a very worthy fowl and we predict a boom for them in the very near future, and those who take up the breeding of them now will reap the harvest when the boom comes.

Rock Hill Poultry Farm is not coming to the front, it has arrived there long ago, and it is a well known fact that many of the noted prize winners at the leading shows came from this farm.

On White Wyandottes they took first cock, third hen, fourth pullet and third pen. Their first prize cock was certainly a fine specimen of this variety, in fact he would have to be to win first at this show, as the White Wyandotte class was one of the strongest, and many fine specimens did not get a place.

They have hundreds of good breeding birds at from \$10 to \$25 per trio. Males from \$5 up.

Mr. Corey has taken exceptional care in making up his pens this season, and as he supplies his customers from the same pens that he produces his winners there is no reason why his customers should not be as successful in the show room as he is.

Every customer is guaranteed a square deal. Better write for their large illustrated catalogue and get acquainted with the Rock Hill Poultry Farm, Ossining, N. Y.

OWEN FARMS HITS THE BULLS EYE AGAIN—THIS TIME IN BARRED ROCKS.

We learn that for the past five years Owen Farms has been quietly, and with a great deal of care, breeding Barred Plymouth Rocks, and with an avowed intention of coming into the "Barred Rock Alley" at Madison Square, New York, with birds sufficiently good to catch the eye of the judge in placing the ribbons, and particularly the blue ribbons of First Honor, at that, the greatest Barred Rock show in the world.

When Mr. Delano, their manager, joined Owen Farms he carried with him an enviable reputation for the breeding of the Barred Plymouth Rock, and successes in showing it. At the St. Louis Exposition he had won "Second Collection," a very great honor indeed. He also carried with him to Owen Farms some of the best birds that he ever owned.

From this beginning results have been attained which, we believe, do great credit both to Owen Farms and to their manager; but the news that we are so glad to receive and to give to our readers is that the whole flock of Barred Plymouth Rocks, numbering 600 birds, together with the entire good will and business of Gardner & Dunning, of

Auburn, N. Y., has been sold to Owen Farms.

At every New York show where Gardner & Dunning have exhibited they have always been in the first ranks of the winners. In the last ten years at Madison Square there have been awarded fifty Firsts and fifty Seconds, and of this number twenty-three Firsts and Seconds have been awarded to this remarkable flock. Think of it! Nearly one-quarter of these coveted prizes

Build Your Own Incubators and Brooders

Save money. Thousands are doing it every year. I teach you how and supply all the parts you cannot make, at low prices. My New Lampless Brooder will cost you \$4.00. Greatest Brooder invention of the age. Repairs and supplies for all kinds of Incubators or Brooders. My new book of plans and catalogue has over 100 illustrations, showing step by step every stage of construction—so simple a 12 year old boy can follow them. Send 25c coin or U. S. stamps to cover cost. Your money back if you are not satisfied. I allow the price of the book on your first order. Send for the book today. It means Dollars to you. H. M. SHEER, 411 Hampshire St., Quincy, Ill.

Wilson's S. C. B. Minorcas

WON silver cup at Indianapolis, 1909, also 110 regular and special prizes at leading shows this year. Eggs from two grand pens scoring 94 to 96. Order early. Mention A. P. J.—E. E. WILSON, Indianapolis, Ind.

1909 Rose and Single Comb Rhode I. Reds 1909

At Masillon, Ohio, won twenty prizes on fourteen entries, four color and two shape specials. Rhode Island club and two specials from association on rose comb, also first and color special on single comb, and on rose comb 1 cock; 1, 2, 3 cockerel; 1, 2, 3, 4, 5 pullet; 1 pen; 1, 2 hen; silver cup special for best pen in American class. These Reds are not a prize winning strain only, but have won first for me at every exhibit I made the last four years, and are great egg producers, of which I make a specialty. Remember only one male in all my yards and flocks that has not won me a prize. Eggs, special yards 1 and 2, \$2.50; all other yards, \$1.50 per 15 straight. Only a limited number of single comb eggs to spare.

Maple Glenn Poultry Yards, D. D. Beechy, Mgr., Sugar Creek, Ohio

BARROW'S WHITE LEGHORNS

Are birds of superior quality. 1st, because they are bred for the largest possible number of large, pure, white market eggs. 2d, because they are Standard bred and are winning at the leading large shows including Madison Square Garden. 3d, because they are large size and please our customers. Stock for sale, both old and young, for utility or exhibition purposes. Eggs \$2.00 per 15, \$10.00 per 100. Exhibition matings \$5.00 per 15.

The Maples Poultry Farm, Geo. A. Barrows, Prop., Box 500, Groton, N. Y.

Eggs from 1909 Matings

Columbian Plymouth Rocks—My strain has standard Rock size, shape, comb, shanks and practical qualities added to splendid Light Brahma color. My best pens are headed by males worth \$150.00 to \$200.00 each, mated to grand females. Eggs \$5.00 per 15, or 50 for \$15.00. From other pens \$3.00 per 15, \$5.00 per 30, \$7.00 per 45.
Black Wyandottes—My original strain of twenty-three years' breeding. Best eggs \$4.00 per 15, \$7.00 per 30. Other pens \$3.00 per 15, \$5.00 per 30. Circular free. F. M. CLEMANS, Mechanicsburg, Ohio.

WYANDOTTES Whites, Columbians, Goldens. Young and old Stock for sale at reasonable prices.

EGGS From the following varieties for 1909 season: WYANDOTTES, Whites, Columbians, Goldens; REDS, S. C. R. I. Reds, R. C. R. I. Reds; BUFF ORPINGTONS.

A few good S. C. R. I. Reds and Buff Orpington Cockerels for sale at right prices. Write your wants to

DILLON & BELL

4106 Colerain Ave., Cincinnati, O.

Sheppard's Famous Anconas

The world's best. Rose and Single Combs. First wherever shown including London, Eng., Madison Square and Cleveland. At the great Madison Square Show, New York City, my Anconas won all the 1st and 2d prizes in the largest Ancona class in the history of the big show; a record not equaled by any breeder. When my birds can make a clean sweep in the greatest show of the nation, they will surely win for you. They are the greatest layers in poultrydom. Are noted for their winter egg production. Stock and eggs for sale. Circular free.

H. CECIL SHEPPARD, Importer - Box M, BEREA, OHIO

"THE WILLETTT IDEA"

Will preserve eggs for one year to your entire satisfaction. If you keep poultry and sell eggs, or if you buy eggs, it will pay you to investigate. The Government recommends our method as the best. Complies with pure food laws. Agents wanted. Write for particulars and prices. Willett's Water Glass Egg Preserver Co., Box 56, Anderson, Indiana.

WHITE ORPINGTONS

First and second cockerel and pullet, 2d and 3d hen at Chicago December 1906. Mating list sent on application.

PRATT'S POULTRY PENS, M. P. Pratt, Prop., Evanston, Illinois

**Eureka Leg Bands**

Adjustable. One dozen 15c; 25 for 20c; 50 for 35c; 100 for 60c. Sample free. **Wagle Printing Co.** Marshall, Mo.

48 BREEDS Fine pure bred chickens, ducks, geese and turkeys. Northern raised, hardy and very beautiful. Fowls, eggs and incubators at low prices. America's greatest poultry farm. Send 4c for fine 80-page 15th Annual Poultry Book. **R. F. Neuber, Box 844, Mankato, Minn.**

75c

Pays for one year's subscription to American Poultry Journal and five years' subscription to Farm-Journal. Each subscriber will also receive a copy of the Lincoln Farm Almanac for 1909. See ad elsewhere in this issue.

S. C. B. Orpingtons

Prize winners at Trenton, White Plains, Mineola, Richmond Hill, Paterson, Rutherford and Madison Square Garden. Stock and eggs for sale.

E. B. SPRAGUE**Flushing - - - New York****W. F. CALTRIDER**

Breeder of Prize Winning Silver Laced Wyandottes, Golden Laced Wyandottes and Buff Orpingtons. Eggs \$3.00. Stock for sale at all times.

R. F. D. No. 4 : Bryan, Ohio**MERRY WIDOW BROODER**
All Metal

Fire-Proof, Self-Ventilating Sanitary.
100 Chick Size \$3. 200 Size \$5.00.

BABY CHICKS STANDARD BRED

In the following varieties: Barred, White and Buff Rocks—Brown, White and Buff Leghorns—R. I. Reds—White Wyandottes—Light Brahmas—Buff Orpingtons—Black Minorcas and Black Langshans. Our stock are winners in the show room and are bred to lay, we get our eggs from recognized breeders, not farmers. Capacity 2,000 per day. Arrival guaranteed. Price 8c to 15c. **STANDARD HATCHERY, Attica, Ohio.**

80c for Corn

This is a good price for corn. The man who gets 16 lbs. of pork out of a bushel of corn fed to his hogs gets this price. Some have reached 18 lbs. The man that only gets 8 lbs. has something to learn that would benefit him.

Some farmers waste a third of their feed given to hogs because they are not informed of the best methods of feeding.

What to feed and what combinations to make, to cheapen the feed for the best results and profits, is what each farmer and feeder should know.

J. J. Hill, the long, level-headed railroad king and philosopher, says: "We can double the yield of our crops by knowing how to farm right."

The American Swineherd

Is a specialist and will teach you how to get the best results and make the biggest profits from hog raising and corn growing. Hogs and corn go hand in hand.

Why not learn how to make two pounds where one was made before and grow two bushels where one was grown before.

Prof. Kennedy of the Iowa Agricultural College says: "Your paper is a leader in its line of feeding."

Special Offer: Send us \$1 for four years' subscription to the **AMERICAN SWINEHERD**, and we will send you as a premium a copy of the **Pig Feeders' Manual**, a practical, instructive book on feeds and feeding swine worth \$1 itself. This equips you for a successful hog business and is the "Cheapest Expert Help You Can Hire."

AMERICAN SWINEHERD**542 Como Building :: Chicago, Illinois**

have fallen to one firm. We cannot but congratulate Owen Farms in acquiring this magnificent flock and record.

We learn further that Mr. Newton Cosh, than whom no breeder of Barred Rocks is better known in the United States and Canada, has joined Owen Farms as their assistant manager, and will have the care of their Barred Rock business.

We learn also that during the last year Mr. Cosh has had the complete mating of the birds, and their fine record at the Madison Square Show this year, where they won first pullet, second hen, second and fifth cock, eighth cockerel and fifth and eighth pens, and the cup for the best cock, hen, cockerel and pullet, demonstrates beyond a doubt that in the hands of this remarkable Barred Rock breeder Owen Farms will be little likely to have to lower its colors to any of the old and well-established breeders showing at the next New York show.

We do not hesitate to say that if you are looking for Barred Rocks, Owen Farms will look after your interests in the same business-like manner with which they have treated their customers in White Plymouth Rocks, White Wyandottes and Buff Orpingtons.

WHAT SHOULD BE EXPECTED

—OF AN—

INCUBATOR.

—BY—

O. W. RANDOLPH.

INVENTIONS may supplement but can never supersede natural law, and the degree of success or failure of inventions is measured by the degree of their adherence to, or departure from nature's laws.

Especially is this true of inventions that enter the domain of the laws of life. It was at first but crudely applied, and while some progress has since been made, there is still evidence in most of the incubators on the market, a notable lack of true conception of the laws of nature entering into the problem of artificial incubation. When buying incubators it is only doing justice to yourself to be very careful in selecting an incubator in which these four vital points of artificial incubation are accurate, so as to leave no guesswork for the operating of the machine, and success is yours in the poultry business. First, correct regulation of heat under all conditions, from the time the incubator is started until the last chick is excluded from the shell. Second, ventilation, correct moisture without creating a draft of air through the machine. Third, correct moisture without the aid of a troublesome hygrometer. Fourth, egg tray in which the large end of the egg will always be slightly elevated, so as to prevent the germ developing in the small end of the egg, which takes place during the first five days of incubation. These are the vital points of incubation. As already demonstrated, it is not sufficient simply to supply heat, moisture and ventilation—it must be applied as nature applies it.

I am in the incubator business for keeps, and if you buy an incubator, get

one that is sure and certain in operation and well built. Thin walls, with dead air space are N. E. G., or, in other words, no earthly good, but buy a machine with good walls, packed with good insulation, so as to retain the heat. "Dead air space" costs nothing, but good insulation costs money. Any one of the Randolph line of incubators has double walls and packed with the best of insulation. The heat in the Randolph incubator is under absolute control at all times and under all conditions, by the use of our electric damper, which is operated by the thermometer in the egg tray through a No. 6 dry cell battery. The damper over the direct flue is opened and closed as quick as a telegraph instrument, and is not affected by atmospheric conditions of the outside like the expansion and contraction regulator. I know what it will do; I know it is impossible for the temperature to vary only a fifth of a degree. When I say absolute control of the heat under all conditions, I don't mean close to, or near by, but 103 degrees at all times, while most of the other makes of incubators vary from two to five degrees during the hatch. The time will finally come when all manufacturers of good incubators will use moisture. In all the incubators I have ever built since 1900 there never has been one but what has had moisture supplied in some way. With my moisture appliance I have been able to get the same degree of humidity in the incubator as found under the hen. The pans are made of galvanized iron and filled with a specially prepared mineral, which will only absorb the required number of ounces of water to the number of cubic inches of air space in the egg chamber, without the aid of a troublesome hygrometer. The ventilation in all my incubators is distinctly different from other makes. The air is pure and warmed before entering the machine. The movement of air is very mild, so as to get the desired temperature of 103 degrees. The egg tray used in my incubators is constructed of slats placed one and one-eighth inch apart and slanting downward from the end to the center, and to turn the eggs all the operator has to do is to remove one egg from the lower end of each row in the center and place it at the opposite end of the row it was removed from, allowing the rest of the eggs to turn half over. When the chicks hatch they drop through to the nursery without disturbing any other egg in the tray. In this tray the large end is always slightly elevated above the small end of the egg, so as to avoid the germ forming in the small end of the egg. There are several other points about this tray that I would like to mention, but it would consume too much space. If you will but mention this journal and write me, in care of the Randolph Incubator Company, of Toledo, O., I will mail you one of my handsomely illustrated catalogues on Randolph incubators.

The chicks' drinking fountain should be carefully washed. Bowel trouble often originates from the practice of giving milk and water from the same fountain on the theory that all the chickens want is a drink. Milk is never a substitute for water.

Fowls seem exceedingly grateful for the gift of cold water. They never swallow a drop of it without turning up their eyes to heaven.

WHITE ORPINGTONS DE LUXE.

Something About the Breed and How to Breed Good Ones—Their Popularity Growing.

Written for A. P. J. by Amos Burhans.

To the close student of the affairs of hedom the recent full-page announcement of Mr. Ernest Kellerstrass giving the statistics of the Crystal Palace show in London for the past three years is one of more than usual importance. The popularity of the Orpingtons has come to the fore with greater strides than has the star of any other breed that has had its day in the ascendency.

And note you that the ranks of the Orpington admirers have been filled from the thousands upon thousands of devotees of other breeds practically in the same class as these great utility fowls. That is to say that the breed of Orpingtons have made their staunchest friends from the ranks of other general purpose fowl admirers. Every breed has its day, and this is true of the Orpingtons, and the Whites in particular, and there is no sign on the horizon saying that there will soon be a let-up in the demand for them either in the show room as peers of the breed and fancy or in the utility yards where they have been given a fair and impartial trial.

The White Orpingtons began their real history in the American fancy when Mr. Kellerstrass took them up, for till

he pushed them to the front where they now are they were a coming variety, whereas now they are a bird that has arrived and their buds have not all bloomed. Today they are changing hands at figures that seem to grow from season to season. The demand among those who have begun their breeding for show birds and breeding stock of the highest type is constantly increasing. The past winter in the show room has proven this to be true in a thousand cases.

Mr. Kellerstrass has done for this variety and for the breed of Orpingtons in general what no other man has ever accomplished for any other fowl. The demand that he has made for fowls from his own yards he has not been able to satisfy and has passed business on to breeders of the variety who have shown themselves able to care for it. The general momentum that the breed has gained since he became identified with it has made business for every man who bred good Orpingtons. The classes at American shows were never so large as at present and the quality never so high. And while it seems as though the excellence of the White Orpingtons cannot be bettered, it is certain that for years they will continue to increase in the number of their breeders and fanciers.

One of the things that has been very instrumental in getting the White Orpingtons so far to the front is the wonderful practical value that Mr. Kellerstrass has demanded in this bird.

A perfect Orpington outline is all well enough, as are beauty of head points and absolute clarity of the pure white plumage, but early maturity and ability to fill the egg basket in winter has brought them a host of friends who have found them to fill these requirements admirably.

Their broad bodies fill out with a wonderful evenness as they advance stage by stage in growth. I have heard many admirers of them declare that there is not a point in their chick hood when they were gangly in outline or not able to be prepared for the table with some degree of satisfaction. In many varieties the practical has almost been lost sight of by those who were giving all their time to them and as a natural consequence they were not the layers they should have been or the fowls to make good on the table that they once were noted as being. Market men the world over are giving the White Orpingtons a good chance to prove their value as a growthy fowl that is ready for the knife whenever called upon to sacrifice their toothsome carcasses to epicurean tastes. If you were to go through the breeding pens of the Kellerstrass Farm today and see the selections made for breeding purposes you would readily back up this statement I have made.

Further than this: This breeder has been working to increase the egg production of the White Orpingtons from the time he has been their chief promotor. He appreciates the fact that

Ivenhor, valued at \$1,000

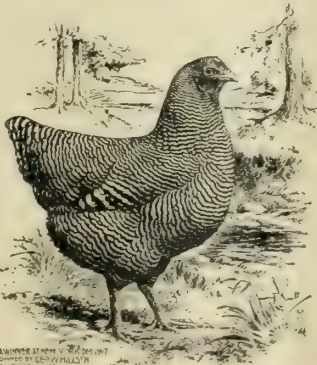

Again at Indianapolis, Feb. 1909

The quality show of America, Condit's White Rocks won every first, three seconds and four third prizes, and the grand challenge \$25.00 Silver Cup for the best exhibit of quality, all breeds and varieties competing. This with my record of every first, two seconds and two thirds at the Great Indiana State Fair, 1908, and four firsts and five seconds at Marion, Ohio, December, 1907, and every first and color special at Indianapolis, February, 1907, stamps the quality of the Condit strain. I make no boasts of winnings at local shows or fairs, but in the strongest classes in the largest shows, and under America's leading judges, my birds bred by me, have shown their superiority. If you want single birds, trios, or pens, let me price them. Eggs from my choicest matings. Every pen headed by prize winner male. \$5.00 and \$10.00 per setting.

P. B. CONDIT, 2138 N. Capitol Ave., Indianapolis, Indiana

The Famous "Bar-letts"

HOLD THEIR CLAIM, CHAMPIONSHIP WINNERS AT BUFFALO

First and Champion Hen at Buffalo, 1909

At the wonderful Buffalo Show, Feb. 1 to 6, 1909, George W. Hillson's Barred Plymouth Rocks made a phenomenal record against the best of the East and Central West by winning Four (4) of the possible Five (5) First Prizes, Third Cock, First Cockerel, First and Second Hens, First and Fourth Pullets, First Exhibition Pen, the New York State Challenge Cup for Best Cock, Hen, Cockerel and Pullet. My "Champion of Buffalo" First Prize Cockerel is a masterpiece in the art of breeding and is beyond question the greatest Barred Rock living. My Pullet "First Attempt," winner of Three (3) Specials, New York, 1907-08, is here First Hen and Champion Colored Female in the show. Her record is equaled by no other Barred Rock female in the world. My First Prize Exhibition Pen contains the grandest conformation of color in male and females of any exhibition pen that ever graced the showroom.

For sale: Birds that will reproduce themselves. Eggs from the grandest matings in the world, at prices within the reach of all. One setting, \$5.00; two settings, \$9.00; three settings, \$12.00; four settings, \$15.00. Fine illustrated circular free.

GEO. W. HILLSON,

(Ten Years with
E. B. Thompson)

Box 400, AMENIA, N. Y.

It isn't so hard to hatch the chicks—any good incubator will do that. The trouble lies in getting the little downy fellows through the chick period to the money making time. Those who learn only from their own experience pay dearly in time, in loss of chicks, in money. The new book,

"Chick Culture"

By A. A. Brigham, Ph. D., embodies the experience of the successful poultry raisers of the world. Dr. Brigham is a recognized authority. His whole life has been devoted to the study, practice and teaching of agriculture and poultry culture. He is a graduate of the Massachusetts Agricultural College; completed his education in the world-renowned Goettingen University, Germany; was called by the Japanese government to the Imperial Agricultural College at Sapporo, where for five years he was professor of agriculture; returning to America, he was appointed professor of agriculture at the Rhode Island State College. The results of this experience and his studies are embodied in "Chick Culture."

"Chick Culture"

Starts with the mating of the stock birds and the setting of the eggs and carries the reader clear through to the mature fowl. There are 80 pages, fully illustrated.

American Poultry Journal
and Poultry Husbandry
BOTH FOR ONE YEAR

60c

Chick Culture with Each Order

Poultry Husbandry is a monthly published in old New York State, in the heart of the great poultry industry. It knows what is going on—it knows the gossip, and more—the new ways and practical plans of the big successful poultrymen of the east. It tells its readers everything.

Take advantage of this very special offer and receive all three for only 60 cents. This offer will be withdrawn next month. Address

American Poultry Journal
113 So. Clinton Street, Chicago, Illinois

they must be continuously pushed for practical purposes in the breeding yards if they would retain their hold on the public. Accurate account of the eggs laid by the females in the various breeding yards is kept in such a way on the Kellerstrass Farm that these are instantly referred to when wanted and much attention is paid to the performances of the breeding stock.

Another decided advantage that the advent of Mr. Kellerstrass made when he took up the White Orpingtons was the value of the illustrations he used to call attention to these great fowls. What he has put out in this line has been used largely as the standard by which other breeders judged their birds. Reading matter will do when we cannot have good illustrations to show us what really good shape and type is, but half-tones of the best birds and conceptions of them as given to us by the best artists are better. A good photo will catch

The great uplift in the prices of Orpingtons dates from the sales made by this breeder. And none can gainsay the fact that he has given value for the figures received. It may well be noted that those fanciers who have bought the best stock of this breeder have been most successful in the show room. In fact, it has been demonstrated that to buy the best is the right method of starting in the business.

But let us take a look into the breeding yards and among the breeding birds in Mr. Kellerstrass' matings for this season.

In them he has all the winners of his recent years' showing. The sons and daughters of the best hens and cocks and pullets and cockerels he has ever shown are there to bring the high degree of perfection this flock has attained right to the very top in excellence. You would note if you made the trip through the yards that here was an

The \$7,500 pen of Crystal White Orpingtons which was sold to Mme. Paderewski by the Kellerstrass Farm, Kansas City, Mo.

the eye when one has not the time for the text relating to the birds themselves. More credit is due the artists who have made a life work of poultry illustrations for the present state of progress made in the accepted standards of the various breeds than is due the writers for their effusions on the birds as sketched in the types.

And on top of this still stands the exhibition of the best birds in the show rooms as educators of what is correct in a variety. In this respect Mr. Kellerstrass has been in the lead for years. His remarkable exhibits at the greatest shows in America have gained for him the title of the master showman of White Orpingtons. The list of his winnings is truly too long to encumber the space at my command, which is saying much. This breeder has from the very first gone into the hottest competition and proven his birds better than his competitors and then comes back again another year to show that he was capable of breeding them still better and able to fit for exhibition the best birds of the breed.

aggregation of fowls with one type and mated from year to year with the same purpose in view. Bright in appearance, clean-cut in outline and very alert, each hen or pullet showing her perfect condition in her nicest way.

You would note that the females were full-breasted, well-cushioned and nicely-cut in their body and fluff lines. Baginess is not tolerated. In the breadth of their bodies they are full and their lines are rounded without scantiness. Followers of the exhibits made by the Kellerstrass Farm will bear me out in this fully. In plumage the breeding birds are pure white. What has been said of the modern white plumaged show bird by some of the fanciers in the East cannot be said of the Kellerstrass White Orpingtons. The Crystal strain is noted for its purity of color, they are bred that way. Bleaching does not have to be resorted to for their absence of foreign color is bred in them. The name Crystal White Orpingtons is a name that the birds have been bred to uphold.

The males at the head of the numer-

ous matings on this farm are as typical of high excellence as the females. They are low on the leg and as prettily rounded in their contours as the illustrations of them recall to your mind. While line breeding has been largely responsible for their splendid reproducing qualities in the breeding yards, that characteristic has been attained by the wisest selection of the birds used in the breeding operations. Short backs and full tails, with their broad breasts and fullness of body in general that set the standard for the breed wherever they are known.

In color the males are white. Not that sort of deadish whiteness that is seen so often, but the pure whiteness you can only describe by the term crystal whiteness, the cast so full of life and vigor. There is a difference in the natural whiteness and its purity as obtained from breeding for it and the weak-looking bleached color secured from the bleaching processes so much in vogue at the present time.

When it comes to style these breeding males are full of life and present the true Orpington vigor. The originator of the Crystal White Orpingtons has kept in mind the keen and quick eye of the breed, the snappiness of movement, and the activeness so essential to the beauty of a large fowl. Loginess is one of the characteristics of the larger fowls, but not of the White Orpingtons, and this has partially been the stumbling block of the heavy breeds.

In summarizing I would say that Mr. Kellerstrass will bear watching as a leader whom it will be wise to follow. He has the variety at heart and will not see them set aside until their progress is past the point where it cannot be obstructed. Pin your faith to the White Orpingtons and see them still further forge forward. The effect of their sterling qualities will not be overhauled and their future is exceeding bright.

Speaking further of the quality of the Crystal White Orpingtons, will almost be useless, as it is so well known where high-class stock is mentioned. Suffice it to end this with the fact that this winter the Cleveland first White Orpington pullet was of Kellerstrass Farm breeding, where she won this coveted honor over an imported pullet which previously won first at New York. This season Mr. Kellerstrass offered a prize for the winners that were at any show in the United States, provided they were of the Crystal strain. He has certificates signed by the secretaries of the various associations where his customers have exhibited, showing that the Crystals won seven hundred and thirty-eight first prizes this show season. This is the main reason why the Kellerstrass Farm did not go into the showrooms for themselves this winter. Their policy has resulted in the selling of over eighteen thousand dollars' worth of show birds, besides the turning down of many orders that they could not fill.

At the recent Buffalo show this farm showed the famous Peggy again and the show officials are greatly tickled over the fact that she was the drawing card for the largest attendance that any show ever brought out in that city. Already Mr. Kellerstrass is contracting to place her and her offspring before the public again next season. Large associations are more than willing to get her for the attendance she will draw. In fact, she cannot fill enough engagements. Peggy

is really earning a good interest on her ten thousand dollar value.

Peggy's descendants, which were taken across the Atlantic by Madame Paderewski, have been doing a large amount of winning over there. In no country has any other hen brought as great a value through her chicks. At the present time there are close to a thousand growing chicks on the Kellerstrass Farm being pushed to their limit of growth and huskiness for the coming season's early trade.

It looks as if there was some progressiveness in such work as this, does it not?

And when one considers what their breeding is, it is easy to figure where they will come in during the next show season.

Good - New Typewriters at Sacrifice Prices

We're starting a most unusual clearance sale of slightly-used typewriters, as serviceable as new. You'll Save Two-Thirds by Buying Now. We've an overstock of typewriters sold to us by money-pinched owners during the past year. Among them are several hundred excellent Smith Premier, Remington and Fay-Sholes machines. We've rebuilt them and put them in perfect condition. Send for catalog and list of unrepented bargains. Machines shipped for approval to any point in the U. S., also rented anywhere. ROCKWELL-BARNES COMPANY, 846 Baldwin Bldg., CHICAGO.

warm water foot
BROODERS double, convertible to single
EASLHAM, IOWA

END VIEW OF HOVER WHICH IS 16 INCHES WIDE AND 30, 40 AND 60 INCHES LONG

A Brooder Built on the Most Exact Scientific Principles

WARMTH BY CONDUCTION AND CONTACT; VENTILATION BY INDUCTION AND PERCOLATION; PREVENTION OF PILING & CROWDING BY MECHANICAL CONSTRUCTION

Has met with a most remarkable reception the past two years, being used and endorsed by many scientific and successful poultrymen such as Judge Russell, Dr. Mitchell, Dr. Kilbourne, Pease, Emery, Hague, etc. Avoids both extremes, being neither a lampless cold storage box nor a hot air bake oven; but is a scientifically, expensively constructed, common-sense, close to nature chick nurse, blending the instincts of the broody hen with the reason of man and satisfying every natural impulse of the chick.

Brooders double, convertible to single; metal fireproof lamp box outside; hovers adjustable to the growth of the chicks; double floors, double tops, triple hover floors, withstanding any weather, using little oil, and for service in orchard and field. As nearly fireproof as any brooder now made, and will be insured by any company that will insure any brooder. The Close-to-Nature is rapidly taking the place of the brooders relegated to the scrap pile, and is helping to make the great poultry industry prosperous.

Free Brooder Book for the asking.

Eggs for Hatching and Breeding Birds for Delivery any time

A 1908 Cockerel

Pittsfield, Me., Season 1909.

TO PROSPECTIVE BUYERS OF
BREEDING BIRDS, HATCHING EGGS or DAY-OLD CHICKS.
GREETINGS:-

We beg to advise you that we are prepared to handle orders for breeding birds; hatching eggs or day-old chicks in BARRED ROCKS in the most prompt and efficient manner and WE SOLICIT YOUR VALUED PATRONAGE.

We believe we are fully justified in saying that NO ONE IN THIS COUNTRY IS BETTER EQUIPPED to give you GOOD SERVICE and GOOD VALUES. Our stock is strictly STANDARD BRED, thoroughly healthy and vigorous, reared on UNLIMITED FREE RANGE; IT EXCELS IN EGG PRODUCTION, being bred for EARLY WINTER EGGS; it matures early and is profitable from a UTILITY STANDPOINT. It also EXCELS in SHOW ROOM COMPETITION, birds of OUR OWN BREEDING winning this season 24 REGULAR and SPECIAL PRIZES at the A.P.A. STATE SHOW at PORTLAND, including first and second cocks, first and second cockerels and A.P.A. SWEEPSTAKES GOLD MEDAL on COCKERELS against birds from the best known yards in the country. In BOSTON against the HOTTEST COMPETITION IN THE WORLD we won EIGHT REGULAR and SPECIAL RIBBONS. Our birds are BRED both for SHOW and for UTILITY and we can furnish EXCELLENT BREEDERS at REASONABLE PRICES. We are offering now UTILITY COCKERELS at \$3. and \$5. and A-1 EXHIBITION BREEDERS for \$10. and \$15. UTILITY PENS four pullets and a cockerel, \$16. EXHIBITION BREEDING PENS \$30. to \$60. We are glad to ship birds on approval to be returned and MONEY REFUNDED if not satisfactory.

We make a SPECIALTY OF EGGS FOR HATCHING, price of same being, FROM UTILITY STOCK \$1.50 per 13, \$4.50 per 50 or \$7. per 100; FROM SPECIAL EXHIBITION MATNGS \$4. per 13, \$12. per 50 or \$24. per 100. All eggs are SHIPPED ON THE DAY THEY ARE LAID and are carefully packed thus insuring their being delivered in any part of the country IN A FRESH AND HATCHABLE CONDITION and WITHOUT LOSS OF VITALITY. We stand behind our eggs and GUARANTEE GOOD HATCHES under ordinary conditions.

WE ARE PREPARED TO FURNISH DAY-OLD CHICKS from our MAMMOTH INCUBATORS in any quantity and GUARANTEE SAFE DELIVERY at your nearest express depot. PRICE 25 CENTS EACH or \$15. PER 100.

OUR STOCK PAYS. WE WINTER 4100 birds and raise 15000 to 20000 chicks each season. If it did not pay we would soon have to assign to the grain man. IF IT WILL PAY US IT WILL PAY YOU; WHY NOT TRY IT? You can depend on us to use you honorably and give you FULL VALUE FOR YOUR MONEY. We refer you to the A.P.J. WE WILL MAIL YOU OUR 24 PAGE ILLUSTRATED CATALOGUE FREE ON REQUEST.

Yours very truly,

VITALITY OF YOUNG RHODE ISLAND REDS.

Without doubt the greatest problem before the poultry fraternity today is the question, why so many chicks die, during the first few days of their existence, and how it can be avoided. One of the greatest pleasures to be derived from this business is "anticipation," and the worst "realization" is a bad case of what is commonly called "White Diarrhoea," which in many cases is no diarrhoea at all, but a weakness in the lungs and other internal organs. The ability to perpetuate your flock each year with larger, stronger, more prolific specimens is the cornerstone of success in this industry, and the breeder that is a successful chicken raiser can make more profit from poultry, either from the utility or fancy standpoint, than any crop raised on the farm, especially when conducted under favorable circumstances.

heat, were more or less beneficial, under some circumstances that there was that indescribable something that nature used in connection with the hen that no artificial method could duplicate, and that unexplainable quality called vitality played a very important part in results obtained from any system. I found that some chicks, if properly incubated at all, would live almost regardless of how brooded or fed, while other batches which might appear perfectly normal up to three days old were just as sure to die inside of two weeks as the sun is sure to rise. No matter how brooded or fed, whether under hens or not, they are bound to die, as they are imperfectly developed specimens and their organs will never do the work that is expected of them, and even though they live a few months they will always be a poor investment to anyone in the end. The more I know of the poultry industry the more I realize its wonderful possibilities and

Bred and exhibited by the Graystone Poultry Farm, F. H. Davey, Mgr., Yonkers, N. Y.

The poultry industry is this nation's "King Business," and when we realize that the average life of a fowl is less than one year we see the importance of successfully rearing the young each year. My practical experience dates back to when I had 100 setting hens going all at one time as a side line, while I was going to school, and later when I took up incubators and brooders I found I really knew less each batch I took off, and when my business was run by experts I was worse off than ever.

Last spring, when I resigned from the bank, after being tied up with the filthy lucre for twenty years, I took active management of the business and made the raising of young chicks my hobby and carried on many interesting experiments which proved very beneficial to me, if not the chicks. Owing to the fact that I had trouble made me give the subject all the more careful thought at every stage, until I felt I was on the right track.

I found, while all the latest rules for disinfecting, sterilizing, and control of

the unlimited opportunities yet to be discovered. Where is there a more interesting problem in nature to study than the development of life in the egg by artificial or natural methods? This small, undiscernable speck we call the germ of a properly fertilized egg hangs by delicate ligaments near the yolk of the egg waiting for the proper degree of heat to start its development, and when given a certain number of heat units it passes through all the interesting stages and we have the perfect chick. The process can be seen through the shell to a certain extent and the various degrees of vitality are remarkably demonstrated during this time. The strongest germs show strong from the first sign of life and their development shows strength at all stages, until it is time to come forth, when the expert can tell by handling which eggs will hatch the perfect specimens that will live. The weaker germs gradually die off at all stages of incubation, according to the vitality they possess, even up to the hatching time, and even a few days beyond, as the chick is not

fully incubated until the internal nourishment called the unabsorbed yolk is taken into the system, and he is completed and ready to be nourished by the regular way, and the chicks that have to be helped out of the shell are seldom worth the time taken to rescue them, unless hindered by some unnatural cause.

Think of the wonderful examples of vitality of the germs which have been demonstrated by long shipments of eggs for hatching to nearly all parts of the world with comparatively good results. I recently shipped thirty Rhode Island Red eggs to Alaska on an order, hardly expecting him to get much of any returns under the circumstances, when what was my surprise to hear that he had hatched twenty-four chicks and raised twenty-three of them, and he was most strongly impressed with their vitality up there. I have found that the express companies are directly blamable for many poor hatches received from shipped eggs on account of their reckless handling, which jars the eggs so severely that the little ligaments that support the germ in place are broken and the future development of the germ ruined, although the egg might have been perfectly fertilized and the shell not broken in the least.

Any method of relieving the jar of the cars and handling will greatly increase the chances of hatching and I find a pneumatic cushion under the package helps wonderfully on long shipments. There is no possible doubt but what hen-hatched chicks are superior to incubator-hatched chicks, although there is a great difference how each incubator is managed and under what conditions they are run. While the vitality has much to do with it, still the strongest germs can be utterly ruined by improper incubation, and it will come forth, if at all, with tuberculosis in one form or another, only to die, and probably the brooder or system of feeding will be blamed for what no power on earth could avoid.

Think of this little ball of feathers cramped up in its small space forcing its way through the hard shell by its own efforts, from the inside, and how each struggle accomplishes some slight step toward liberty until it gives one

strong effort and the shell opens and he comes forth entirely of its own efforts, and after a few minutes' rest, during which time it dries off from the heat of the hen, you see a fluffy, bright-eyed, strong-legged chick which appears to be twice the size of the egg from which he has just escaped.

fect development is there behind it? No healthy chick needs to be taught anything, as they know intuitively how to eat, drink, scratch and find their way back home right from the start. While in one sense they are about as capable of caring for themselves as any young creatures I know of, still in other re-

First prizes and specials at Chicago, 1908. American Poultry Association diploma for best cockerel, Buffalo, N. Y., won by J. H. McDanell, Warsaw, Ky., breeder of Golden and Columbian Wyandottes, Warsaw, Ky. Send for catalogue.

Take the normal hen-hatched chick, does it hurt them to crawl out from under the hen and get chilled, and even fall out of the box, and even when found apparently dead the hen's warmth will bring him back to life as good as ever, if the vitality and per-

spects I know of no one having so many natural enemies, ranging from the little louse to the human louse (who sometimes reaps the reward of a long season's watchfulness) and incidentally the rats, cats, dogs, skunks, minks, hawks, crows and foxes which are always ready

Rock Hill Poultry Farm's

MAPLEWOOD POULTRY FARM
CRAWFORDSVILLE, IND.

to improve any opportunities you give them.

While tonics or antiseptics may help guard off indigestion and create appetite in young chicks, still I believe the best remedy is plenty of green food right from the start, and give them all they can eat, either by free range or supplying from local beds.

Fowls in their natural state eat large quantities of green feed of all kinds along with all kinds of insect life, which accounts for much of the strong vitality of eggs laid by such fowls, and the difference between two flocks of chicks, one raised with green feed and the other without is very marked, as the batch with green feed will walk right away from the others, and the more or less stunted condition of the flock, together with the white feathers which they will have from lack of proper material to make the necessary coloring matter to carry out what nature intended them to be from their breeding are simply the result of unnatural conditions.

You can't take something from nothing, and even nature will not stand for this method, and three generations of fowls bred under unfavorable conditions and hatched by unfavorable methods will not perpetuate themselves, showing the system is decidedly wrong from the foundation. Green feed can be furnished in many ways by a little management by raising lettuce, turnip tops, sprouted oats and other grains, cabbage and common beets, but the best of all is the Mangle wurtzel beet, which can be kept all the year round, and very easily fed at all times to all kinds of stock. Naturally there is a great difference in different breeds of chicks about their vitality and characteristics and I can honestly say that the Rhode Island Red chicks are the hardest, strongest, hustling chicks of them all, and they will live if given a chance to hustle for themselves.

Their origin makes the vitality still show to a marked degree and the accompanying pictures tell the story far plainer than any words can describe and show their many good, practical qualities at all ages.

The 1 1/4-pound Saratoga broiler is plump and tender, while the 2-pound broiler at two months can't be compared with any other breed, and the 3-pound and 4-pound roasters have that plump, yellow body and yellow legs that command the highest prices.

Just what it is and how to secure this desirable vitality is something that would be hard to explain definitely, but I find that the more we follow nature and the less we try to improve on nature's ways the stronger vitality we have, and the more we hurry things unnaturally the weaker we are making our stock. Give a pen of Reds plenty of pure food, fresh water and fresh air houses, protected from exposure and drafts, and you will not be fighting at every turn the natural results of unnatural methods of poultry culture. The Reds don't ask for any snap.

They want no easy thing.
For trouble they don't care a rap;
They take all you can bring.

They calculate to have to sweat—
It's right, I guess, they should.
They don't care what knocks they get,
If they can just make good.

Edw. T. DeGraff, Amsterdam, N. Y.

Questions and Answers

Questions asked by subscribers will be answered in this department only under the condition that the full name and address is signed by the writer

Question.—(1) Is there a good fruit growers and truckers paper, if so, what is name and address? (2) Is it necessary to use fresh cut bone while using plenty of beef scrap? (3) Will changing old hens from one coop to another during winter time stop them laying and how long?

J. J. Z.
Answer.—(1) Green's Fruit Grower, St. Joseph, Mo. (2) No. (3) Yes, from ten days to two weeks.

Question.—I have twenty hens and two roosters, but don't get any eggs. Have eight Buff Wyandottes; the rest are a mixed variety. They have free range, I feed them a quart of steinmesh mixed feed once a day; bread scraps from the table. They go to a rye patch when they please; get fresh water from a spring; have a nice, clean, well ventilated house to roost in. I killed a hen; her largest egg was about the size of a cherry and was just like a boiled egg. There was about fifteen more smaller eggs, some of them were black and some were filled with yellow oil. What was the cause of it and what is a good remedy?

Mrs. E. J. W.
Gainesville, Ga.
Answer.—This is probably due to improper and irregular feeding. Fowls should be fed at least twice a day and at stated periods. One quart of feed to twenty-two fowls once a day is not enough. In fact, they should have at least twice this quantity every 24 hours. They should also be supplied with beef scraps or fresh cut raw bones; about two ounces to each fowl three times a week. Your fowls are in a bad condition and it will take some time to get started to lay.

Question.—(1) What is the best breed of poultry to raise for egg production? (2) Is one part cracked corn, one part oats, and two parts wheat the best mixture for the grain feed for laying hens? (3) What is the best thing to use on drop boards to make them clean easy and help to keep rid of the lice?

Morton, N. Y. A. C. S.

Answer.—(1) This is a matter of opinion. Some claim the Leghorn; others the Langshan, and others the Plymouth Rock, and so on down the line. All varieties are good layers if bred right and fed and cared for properly. (2) This is a very good mixed feed; but should the corn be dispensed with entirely and more oats or wheat added, we believe the feed will be improved. (3) Coal ashes or slacked lime.

Question.—(1) Is black flag good for lice on fowls? (2) Would chloride of lime make a good disinfectant on a dropping board?

W. G. A.
Sistersville, W. Va.
Answer.—(1) Not that we are aware of. (2) No.

Question.—(1) Can you give me any information of how to get rid of the gapes on old stamping ground without spoiling the sod or plowing? (2) How long will the gape worm live or stay on a place if there are no chicks raised on the place? (3) Do young chicks that are fed cooked eggs when 6 weeks old learn to eat eggs when grown? (4) What is the limited time for a young guinea to be fully developed. (5) I have half breed guinea hen, half white, half speckled, and a thoroughbred male, white. What can I expect from them; speckled ones, or spotted or white?

R. G.
Clay City, Ind.
Answer: (1) We cannot. (2) The raising of chicks on a place has nothing to do with the length of time the gape worm will remain in the soil. Some authorities claim that the common earthworm is a very important factor in keeping up the infection and recommend the destruction of these worms by saturating the soil with a solution of common salt. Space will not permit us here to give full details. Would refer to Dr. Salmon's book, Diseases of Poultry. (3) No. (4) Six months. (5) Probably all three.

Question.—Can you tell me what the result would be if one was to incubate an egg that contains a blood spot, and what

is the cause of such spots? My stock seem to be in prime health and are laying nicely. Would too much stimulant from feeding a quantity of Cayenne pepper cause same?

R. C. W.

Gardendale, Tex.
Answer.—The chances are that the eggs would not hatch. Blood clots are caused by a slight hemorrhage which has generally occurred in the upper two-thirds of the oviduct. Such hemorrhages are the result of great functional activity and congestion of the blood vessels of the reproductive organs, and are frequently caused by the feeding of condiments, such as cayenne pepper, and should be counteracted by the feeding of green food.

Question.—(1) What color should the feet of S. C. Brown Leghorns be? (2) What kind of comb and how many points? (3) Are the pink feet as good as yellow feet?

M. W. R.
Somerville, Ala.
Answer.—(1) Yellow. (2) Large, with five points. (3) No.

Question.—Does white in the under color in hackle and saddle disqualify a S. C. B. Leghorn cockerel?

D. E. G.
Peoria, Ill.
Answer.—No.

Question.—(1) Black Minorca hen a year and a half old seems to be well. She runs backward and lowers her head. When she starts ahead she runs back once or twice before she gets a start. (2) I give grit and oyster shells all the time and ground bone often and lately have had several soft eggs. What is the trouble? (3) I did feed for a few weeks with feed and meal, two quarts of each with red pepper, and hens seem to have diarrhea for the last three weeks, light yellow and sometimes like the white of an egg. I stopped fine feed and pepper and the trouble is better, a lot better. At night I give wheat with one feed a week of corn. Now I give clear meal in morning and three days ago put pepper in again. Last winter I used pepper all winter nearly and had no trouble. Could it have been the fine feed? (4) Is it well to feed ground bone with nothing else, just put out like any grain? (5) I average about 14 eggs from 60 hens, most of them 1½ years; is that fair laying?

J. F. T.
Gloucester, Mass.
Answer.—(1) Evidently been injured on the head at some time. (2) Probably due to an overfat condition of your

SAVE THE CHICKS

By the use of Germozone I saved a bunch of 200 chicks that were accidentally shut out of their brooder last summer during a heavy rain. Also use it frequently with the old fowls and it keeps them in good health. LLOYD B. MISHLER, Breeder of Brahmas and B. P. Rocks, Centerville, Ia.

There is little satisfaction in hatching chicks if you cannot raise them. Chick losses have become so common that many people believe they cannot be avoided, and actually figure on a certain percent of loss from each hatch.

GERMOZONE

will cure Bowel Complaint—the most fatal disease of chicks—in less than 24 hours. But better still, its regular use twice a week will prevent this and most other diseases. One teaspoonful (or tablet) to a quart of water; 96 doses for 50 cents. Are your chicks worth it?

Germozone is a germicide, a bowel regulator, a system builder. It goes to the seat of the trouble and effects a sure and permanent cure. Given in the drinking water twice a week it cures disease, prevents contagion, and keeps the fowls in a healthy, vigorous condition. Prepared either in tablet or liquid form and will be sent, postpaid, on receipt of price.

Germozone is the best health insurance you can have for your poultry. Cost is small, and it is sold on an absolute guarantee.

Price 50 cents.

fowls. Feed plenty of wheat bran. (3) Cayenne pepper should not be fed to fowls; the continual use of it will eventually ruin your whole flock. (4) Fresh cut green bone can be fed this way; but not ground dry bone, as it will affect the bowels. (5) This is not a very good average.

Question.—(1) We have a very vigorous, well-developed Rhode Island Red cockerel mated with two good pullets. Would running with a flock of Leghorns a day once a week have any effect on the progeny of his matings? (2) Is hopper

blood meal or beef scraps; we prefer beef scraps. These can be fed in hopper same as grain. (5) No.

Question.—(1) Is the use of sodium silicate a success in preserving eggs? (2) Please give me the address of a reliable commission company handling poultry and eggs in Kansas City; also one in St. Louis. E. A. F.

Parsons, Kans.

Answer.—(1) Yes. (2) We are unable to furnish these addresses.

Question.—(1) Have eleven Leghorn

FIRST PRIZE COCK, MADISON SQ. GARDEN N.Y. 1908-9,
BRED AND OWNED BY
ROCK HILL POULTRY FARM OSSINING N.Y.

feeding equally good for laying hens of the large breeds as those of the small breeds? (3) Would it be all right to take eggs from incubators at the end of two weeks and finish under hens? (4) While young chicks are kept off the ground and given all the skim milk they will drink and hopper fed on dry bran, will they need blood meal as additional animal food? If so how should it be fed? (5) Would you advise adding oil-cake meal to bran hopper-fed? If so, what proportion? Mrs. J. C. C.

Jollytown, Pa.
Answer.—(1) No. (2) We do not think so. (3) Yes. (4) Dry bran is not a very nourishing food, and it will be necessary to feed something else, either

pullets hatched in May. One started to lay December 28; did not lay again until two weeks after, and since has not laid but one egg a week. What is the cause? (2) Have one Leghorn pullet, seems to be sick; have taken away from the rest of them; do not hear any rattling in the throat, no discharge from nostrils, but sores like red warts on the head near the eyes. One eye is closed and frothy with a yellow discharge; rubs eye on the back and feathers are stiff and sticky; have been treating for roup but does not seem to get any better. What is the matter with her and what is the cause? (3) Find the hen house very damp with frost on the walls and ceiling; when a thaw comes the water drops on the floor,

making the floor wet. How can I remedy this? House covered inside and out with tar paper, with ventilator through the roof.
Mrs. P. L. F.

Winona, Minn.

Answer.—(1) Lack of animal food. Give a little fresh liver two or three times a week. (2) Roup; cannot be cured. Cut her head off. Disinfect your pens, feeding and drinking vessels with a 10 per cent solution of crude carbolic acid. (3)

Answer.—This can only be done by a proper brooding system. For information write some good brooder manufacturer. See ads in this issue.

Question.—(1) Which do you think is best, to purchase stock from a man that makes a specialty of one breed, or a man that breeds a dozen or more? (2) Which do you consider the best layers, Anconas, Blue Andalusians, Minorcas, Leghorns or

layers. (3) There is very little to choose between the Anconas, Minorcas and Leghorns. They are all considered good.

Question.—(1) Does skimmed milk fully substitute meat scraps for laying hens and growing chicks? (2) Can you tell me who has the Black Sumatras? (3) About what do they weigh when developed? (4) Is there any way of preventing W. Leghorns from flying over

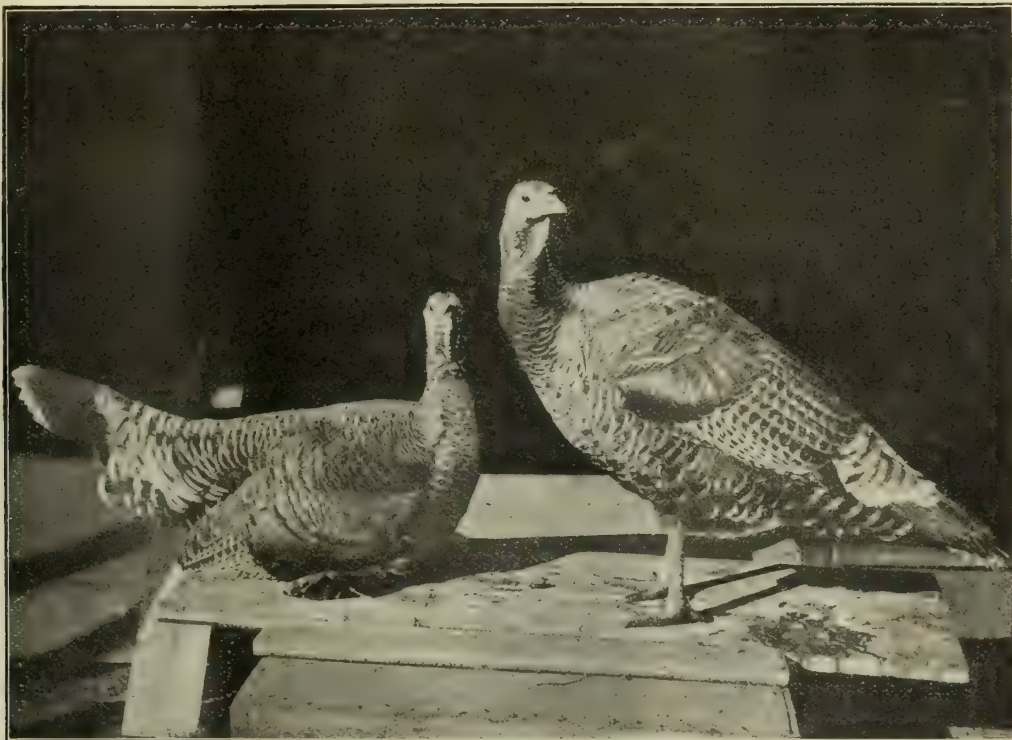

Photo of two first prize Madison Square Garden Bronze turkey females. Bred, owned and exhibited by Bird Bros., Meyersdale, Pa.

Lack of proper ventilation is the cause. Give more ventilation by taking out one or two of the windows and tacking muslin for the openings.

Question.—Will you please tell in your next issue how I may care for and feed chicks hatched in March, to have them for early market?
G. M. B.
Cloverland, Ind.

Hamburgs? (3) What breed do you think would be best to stock an egg farm with?
H. M. B.

Traverse City, Mich.

Answer.—(1) We do not believe there is any choice. If the breeder is honest, it makes no difference whether he breeds one or a dozen varieties, you will get what you pay for. (2) This is merely a matter of opinion. They are all good

78-in. fence, without cutting their wing feathers?
F. M. G.

Short Creek, Ohio.

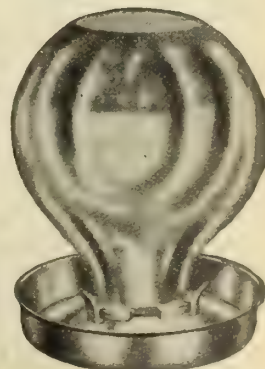

Answer.—(1) Skim milk is considered very good for fowls, but for best results should be fed in conjunction with beef scraps. (2) N. B. Warner, Hamilton, Va. (2) Standard does not give weight. (4) Not that we know of.

Chapman's Improved Trap Nest

At the great New York and Boston poultry shows thousands of poultry men were unanimous in declaring the Chapman Trap Nest the leading trap nest in the world. If you want a trap nest that will do the work five years from now as well as today you will want the Chapman Nest. If you wish a nest built upon honor you are sure to find it in this nest. Liberal discounts to agents. Write for catalogue.

3-nest size \$3.00 6-nest size \$6.00

CHAPMAN'S SANITARY FOUNTAIN

is the most sanitary poultry fountain in the world today. The reservoir is made of 3-16 inch walls of glass reinforced to 1/2 inch where it locks with the pan. It will stand all kinds of abuse before breaking and can be easily cleaned. With the unsanitary conditions of poultry fountains as they are today, is there any wonder at the great death rate in the poultry yards, especially among the chickens. More deaths occur from polluted water than in any other way. This fountain is what you have been looking for. Write for a catalogue. Fountain with glass reservoir and metal pan, capacity five quarts. \$1.00; galvanized iron, complete, capacity one gallon, 80 cents.

REX FAMOUS COMPLEXION POWDER

The king of all beautifying powders. It is absorbent and non-irritating and may be used where other powders are impossible. It will enhance the beauty of the most perfect complexion and render less apparent the defects of the poorest. It is endorsed by the leading professional and society people, and we guarantee every package to give perfect satisfaction. To further introduce this wonderful powder, we make this special offer to YOU. Send us the names and addresses of ten ladies and 10c in money or stamps to cover charges and we will send you prepaid a sample package of **Rex Complexion Powder**, a sample jar of **Rex Scientific Beauty Cream** and our handsome illustrated **Beauty Book**. This handsome book is 32 pages and cover, and complete in detail; telling you how to preserve your beauty and create new charms. **Rex Scientific Beauty Cream** is without a peer, we positively guarantee that it contains nothing that will produce or encourage the growth of hair or down on the face. It has more body and a better working cream than any other cream manufactured, and will not turn rancid. By dealing with us you are guaranteed satisfaction; we will promptly return purchase price if any of our articles are not perfectly satisfactory to the user. Address

Rex Beauty Specialists

Dept. 220 290 E. 43rd St., Chicago, Ill.

Question.—Do you consider lard scraps healthful and beneficial for laying hens? (2) Will lungs of cattle increase egg production; if so, which would be better, fed raw or cooked? C. O. O.

Wyandotte, Mich.

Answer.—(1) Yes, in moderate quantities. (2) Yes, feed raw and fresh.

Question.—(1) What is the cause of a chicken losing the feathers on its neck? (2) What causes feather eating and what is a good remedy? (3) What is a good remedy for roup? (4) For crop bound? (5) Which breeds are the best layers and which are the best meat breeds?

Fort Washington, Pa. E. F. W.

Answer.—(1) This is caused by the depluming mite. A few applications of lard and sulphur stop this. (2) Feather-

the tail lolls to one side. Can this be caused by disease, and, if so, what, and what remedy, or is the neck broken or dislocated? (2) My S. S. Hamburg pullets, May hatch, have not commenced to lay. How should I treat them? They are on free range and seem healthy, but their combs are not developed. (3) Do black points on the wings disqualify R. I. Red cockerels? Black points on the hackle feathers? Same, relative to R. I. Red pullets? R. P. V.

Okmulgee, Okla.

Answer.—(1) This bird should be confined in warm, dry quarters and given special diet. The liver is no doubt out of order. One of Carter's Liver Pills every other day for a week will be found beneficial. (2) Feed beef scraps or fresh ground raw bone about three times

OWEN FARMS
BREEDER OF ..

Buff Orpingtons Jubilee Orpingtons White Orpingtons	Black Orpingtons White Wyandottes	White Plymouth Rocks Buff Plymouth Rocks Barred Plymouth Rocks
---	--------------------------------------	--

Vineyard Haven, Mass. Dec. 19, '08

Mr. Frank P. B. Chapman,
C/o Chapman Trap Nest Co.,
176 Federal St., Boston, Mass.

Dear Sir:—

I take great pleasure in saying that I have received and tested the trap nest sent me some time since, namely the Chapman Improved Trap nest, and I consider it in construction, smoothness of working and all round points the best I have ever seen. It deserves to be brought to the attention of all poultrymen as trap nesting is a wonderful advance in poultry raising. You have in my judgment the best and deserve great success.

I beg to remain,

Yours very truly,
Owen Farms.

W. B. O. / L.

Wm. Barry Owen

Fac-simile of a letter received by the Chapman Trap Nest Co., Boston, Mass., from Wm. Barry Owen, proprietor Owen Farms, Vineyard Haven, Mass.

eating is caused by idleness. Tobacco juice sprinkled on the feathers will stop it. (3) See roup cures advertised in these columns. (4) For full particulars see Dr. Salmon's book, Diseases of Poultry. Price, 50c. (5) The Mediterranean classes are considered the best layers and the American classes the best for market. See our new book, Origin and History of All Breeds of Poultry. Price, \$1.00.

Question.—(1) I have a R. I. Red cockerel which began to mope about a month ago, and on examination I found the head drawn into the body, making the hackle appear like a collar. The neck is bent in an L shape at one place. He eats well and bowels seem normal. The back seems to be affected some, and

a week, about two ounces to each fowl. (3) No.

Question.—(1) Would I have good results if I mate 1 cock and 3 cockerels to 40 pullets? (2) I have one pen 60x135 feet; can I keep 40 hens in this pen. (3) I have a scratch shed 30x10. How many hens can I keep in it? (4) I have a cockerel mated to three pullets and two hens; is that all right? J. T. N.

Carlyle, Ill.

Answer.—(1) The chances are that you would not? (2) Yes. (3) Thirty. (4) Yes.

Question.—(1) I raised one cockerel and one pullet, hatched out on April 1. The pullet started to lay in November

and laid 18 eggs, then took to moulting and the cockerel did not moult. Can you tell why this pullet moulted. (2) What shares should I have if I give day old Leghorn chicks to farmers or others to raise on shares till they are five months old? A. L. M.

Mishawaka, Ind.

Answer.—(1) We are unable to say. (2) At least one-half.

Question.—I have twenty hens, all in good condition and mostly all laying at present. Now, some of them get kind of weak on their legs the day before or sometimes just before they are due to lay. W. P. G.

Chicago, Ill.

Answer.—This is caused by the egg pressing upon a nerve, and is no uncommon occurrence. We are unable to give remedy.

Question.—I have hatched chickens with hot water machines and also with hens, but with incubators there have been many crippled chicks. What may be the cause of this? (2) Can turkeys be hatched and reared by machines, as well as by hens? (3) What month should Leghorns be hatched to make good winter layers? (4) How often should new stock be introduced? W. E. S.

Buffalo, Minn.

Answer.—(1) This is caused by too much or too little heat in the incubator at some period during incubation. (2) Yes. (3) April. (4) Every second year at least.

Question.—(1) I have twenty-five Pekin ducks. Please tell me the best method of feeding to make them lay? How many times a day? How much at a feed? (2) I have, also, nine pure bred Barred Rocks and a rooster. How much and what shall I feed them to make them lay for breeding purposes? M. B. B.

Valley Lee, Md.

Answer.—(1) Space will not permit us here to give full details. You will find articles treating on this subject in other parts of the paper from time to time. (2) A small handful to each fowl three times a day.

Question.—(1) What is the cause when March hatched S. C. W. Leghorn pullets moult in first part of January; they had a good moult in August. Is it caused by feeding? (2) What is the cause of dead chicks in eggs during incubation? H. J. G.

St. Louis, Mo.

Answer.—(1) This is usually caused by too heavy feeding of rich foods. (2) This is generally due to poor condition of the breeding stock.

Question.—My poultry house is situated in a very cold place and the combs of my roosters have suddenly changed color. The spikes have turned black, just below the spikes have turned white, while the lower half (nearest the head) remains red. The white portion appears to be peeling off—a kind of thick skin, as it were. Is it merely a case of frozen comb? (2) Can you tell me if my roosters (ten months old) are the right age for dubbing. A few hints on how to do it will oblige me. M. H.

Butte, Mont.

Answer.—(1) This is a case of frozen combs. Frequent applications of vaseline will bring them back to their natural condition. (2) From six to ten months is right age for dubbing. For full information write to George S. Barnes, Battle Creek, Mich.

RANDOLPH INCUBATOR CO.

TOLEDO

OHIO, U.S.A.

LOOK FOR THE SIGN OF THE FROG.

All Incubators may look alike to you, but there are four distinct features in the Randolph Incubators that cannot be found in any other make. You ought to know the answer to these four questions to buy an incubator intelligently. And the answer to each is easily found in the Randolph Incubators.

1. Is it Self Regulating? Yes. The temperature is automatically regulated by the thermometer in the egg tray, which is connected to an electric damper that is opened and closed as quick as a telegraph instrument, by a small battery on the outside of the incubator.

2. Is the Moisture supplied without the aid of a Hygrometer? Yes. It is accomplished by absorbing so many ounces of water in proportion to the number of cubic inches of air space in the egg chamber, and by evaporating it uniformly so as to maintain a uniform saturation of the air in the egg chamber, making the humidity the same as under the hen.

tain a uniform saturation of the air in the egg chamber, making the humidity the same as under the hen.

3. Is it Self Ventilating? Yes. The Randolph Incubators are all constructed so that the ventilation is taking place at all times without any trouble whatever to the operator of the machine.

4. Is the Egg Tray Automatic? Yes. The egg tray is constructed of slats placed 1½ inch apart, slanting downward from the end to the center, and to turn the eggs, all that the operator has to do is to remove one egg from the lower end of each row in the center and place it at the opposite end of the row that it was removed from, allowing the rest of the eggs to turn half over. There are five other distinct features in this tray that cannot be found in any other make.

Toledo, Ohio, June 2, 1908.

Randolph Incubator Co., Toledo, Ohio.

Gentlemen: Every egg I placed in your incubator was a Black Leghorn, every egg was fertile, and every egg hatched a chick. Can you beat it? Yours truly,

Chas. W. Moore,

3236 Monroe St.

If you are interested in incubators, and want to know more about the Randolph Line, write us and we will be pleased to mail you our illustrated catalogue.

Randolph Incubator Company

206 Meredith Building :: Toledo, Ohio, U. S. A.

Do You Know Hummel?

If not, you had better get acquainted. I have my breeding pens all mated up and can now fill your egg orders. My breeding birds score from 90 to 96 points. I have been very particular in selecting male birds for breeding purposes this season; every bird is strong and vigorous. By my method of packing eggs I am able to ship them anywhere with good results to purchaser, and guarantee safe arrival of eggs to your nearest express office at the lowest possible rate. You can order your eggs direct from this advertisement.

SUCCESSFUL CHICK RAISING.

The principal factors in the successful rearing of young chicks by artificial means are heat, sunlight and fresh air, outdoor air. By outdoor air we mean strictly outdoor air gained by the chicks themselves by being allowed to run out in the open air. The great trouble with many poultry raisers, most of them, is the fact that each and every one of them has some particularly personal fad or crank notion which they are bound to indulge even to the extent of ruinous failure for themselves. This peculiar attribute seems to be the stumbling block of the average poultry raiser. Why these eccentricities, we cannot attempt to say, but the fact remains. Each and every one of them has a "system" which is sure to beat the other fellow "a mile." But they don't.

Now I know a great cry will go up that "little chicks should not be allowed to run out in the winter air, for they will surely get chilled and die." But again, they won't do any such thing, but they will grow big and strong. Of course their brooder must be so constructed that the chicks can obtain sufficient warmth at any time nature demands it. And the chicks will get to the heat if it is accessible. I know a great many people say that "No portable brooder can be operated successfully outdoors, they should be under a protecting shed or in a brooder house during inclement weather." That's an old story now, but it is an actual fact that all portable brooders ought to be operated out doors and the chicks allowed to run out in an open enclosure, at all seasons of the year. If any success is expected, they positively must be so operated.

My experience extending over a period of 19 years has fully demonstrated the above fact. Chicks will endure confinement inside a dry sunny building until about three weeks of age. I will now describe something that happens and thousands of you, dear readers, will recognize the symptoms. The chicks get weak in the legs, seem to be troubled with rheumatism, become wobbly, then go down on their hocks, finally die off one at a time, sometimes faster. Up to the time of death their appetites are good, even ravenous. What is the trouble? Lack of outdoor air every time. Prove it by putting the brooders outdoors and build a small elevated yard and let the chicks run out in the sun light, breathe the pure cold air and then see them recover the use of their legs.

This is a sure cure for chicks which go lame or weak in the legs from having been kept too long indoors. What about those chicks which go lame and get weak in the legs which are running outdoors and have always done so? That is another proposition and must be handled in another manner for the cause is different. Usually the chick which goes weak in the legs while running outdoors is one which has grown very rapidly, developed in growth and size faster than in physical strength. That chicken is generally a cockerel, long in leg and scant in feather. He is too big and heavy for his legs. His legs become weak and tired from his constant struggles with his numerous brothers and sisters who are more vigorous and stronger than he. As he gets weaker he is jostled about, tumbled over, tramped upon until he is unable to get around at all. Finally he goes into a decline and passes over to the "majority." Take that one out of the brooder and put it in another among a smaller and younger lot

and they will be too small and young to do him injury. He will recover rapidly and in a short time can be replaced among his own. No special treatment is necessary for this case, simply freedom from the rough existence and too vigorous companions for a time, also restrict him in a smaller yard, don't allow him to range over a very large territory. A yard about three feet square will be about right, confine him. If more than one is affected put them in a coop together, entirely away from other chicks until they recover. When chicks get weak in the legs it is time to confine them to smaller coops or yards for a time.

Bowel trouble, clogging up of the vent is a common trouble among brooder chicks. The cause is lack of heat. The cure is more heat, and a removal of the obstruction. The dried excrement must be carefully removed by the attendant. I use a sharp jackknife or a pair of scissors. "Nice clean sand" on the brooder floor is another cause of a serious loss of chicks from clogged bowels. An abnormal appetite will sometimes seize chicks and they will devour great quantities of sand. This clogs in the bowels to such an extent that the chick is utterly unable to evacuate the intestines, then death ensues. Clogging of the bowels and of the vent is oftentimes not noticed until a death occurs, but with the experienced operator his ears will detect the trouble before serious harm is done. A chick troubled with these bowel difficulties will make a peculiar chirrup or cry each time it endeavors to discharge its bowels. This peculiar cry, or course, cannot be described on paper, but once heard it will never be forgotten, it is so different from the ordinary cries or noises made by chicks. The only cure is to take the chick up in the hands and place it between the thumb and forefinger of one hand while holding it steady with the other. Get the ends of the thumb and forefinger directly under the backbone and right up close to the ribs, then gently, but firmly, squeeze the chick. A hard lump will be felt inside; that is the sand-clogged bowel; trace the bowel to the vent, squeezing constantly. In a short time considerable of the obstruction will be forced out and a passage opened up. One operation is generally all that is required. As a precaution clean out the sand and place other litter in the brooder; hay, chaff, or cut straw will serve nicely.

Looseness of the bowels or diarrhoea is usually caused by unsuitable food or lack of grit. Sour food will cause this trouble very often. If soft food is fed take away all that is not eaten, and keep the feed dishes clean. Clean out the brooder once each week, replacing the soiled floors with clean litter. In cold weather keep the hover sufficiently warm to prevent crowding. Crowding will destroy chicks, sufficient heat will prevent it. Keep the chicks in small flocks, not over fifty in each brooder. Maintain small flocks until the chicks are large enough to roost and until they do roost every night. So long as chicks retire to cold brooding coops they will crowd and if the flocks are large many will be smothered by those which crowd on top of them. When the chicks are placed in weaning coops it is advisable to give them warm coops, ones which can be closed up tight at night. A small ventilator may be allowed at the top of the coop; several one-inch holes will be about right. If the chicks are quite young when taken from the artificial heat of

the brooder I advise using a cold hover made as follows: Take a frame, of light wood strips, about one inch smaller all around than the inside of coop. To this frame tack burlap or cotton cloth, stretching the material loosely across the top of frame. To this frame attach light legs about high enough to allow chicks to crawl under the blanket at night. As the chicks grow in size these legs should be lengthened sufficiently to accommodate the chicks. A cold frame of this kind will effectually prevent chicks climbing on top of each other, the cause of most trouble among chicks. If one thickness of burlap appears to be insufficient several thicknesses may be laid over the first blanket which has been tacked to the frame. Do not take the extra pieces, leave them loose so they may be removed if the weather becomes warmer. If desired, the legs for this frame may be made adjustable by cutting them about one foot

brooder, out doors, until they are one week old in mild weather and in the winter time keep them in until two weeks of age. After that age the chicks should have the run of a small confined enclosure, three feet square will be large enough. Chicks learn very rapidly, but when they become badly chilled they oftentimes lose their reasoning powers and become apparently lost to their surroundings. Very simple and inexpensive methods as above outlined will overcome all liability to trouble.

Feed good, wholesome food, supply fresh water daily, so protected that the chicks cannot become wet, keep grit and beef scrap before them constantly. The small chick feeds now so commonly sold make the best of feed for the first three weeks. They can be purchased for about 3 cents per pound, retail, and are better than oatmeal, also cheaper. After three weeks of age chicks can be fed whole

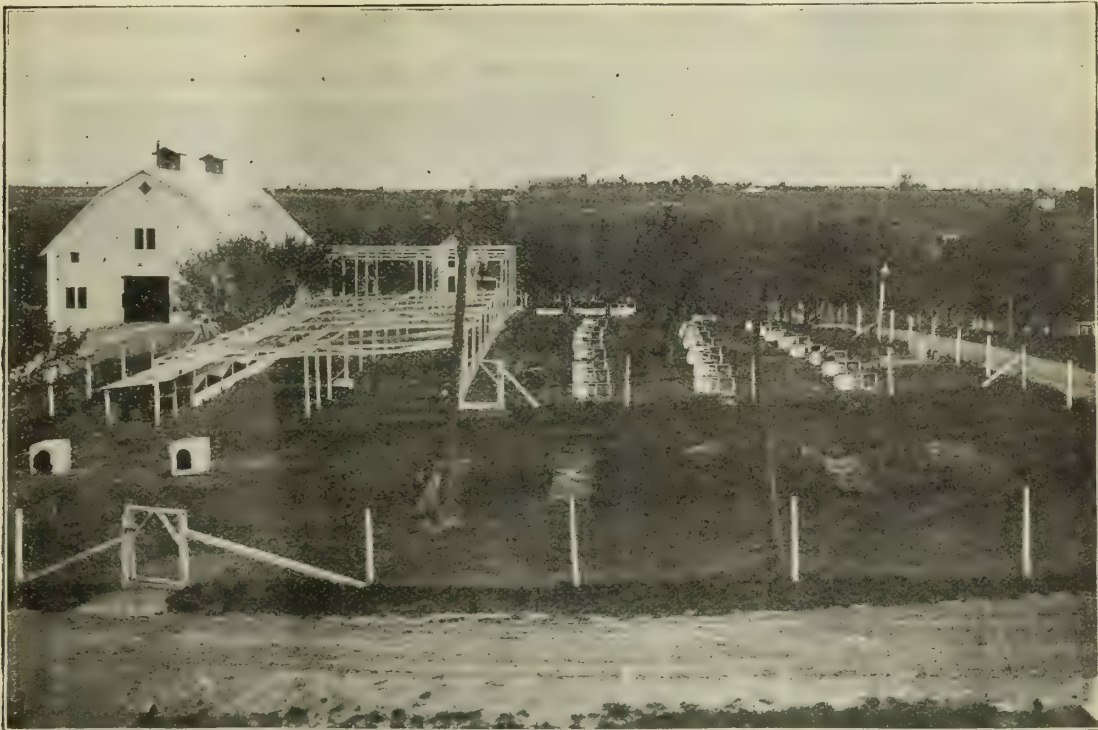

til maturity. Large numbers running together will kill chicks as surely as the plague. Make the roofs of all coops and brooders absolutely water tight. If they leak, cover with heavy tar roofing paper, which can be bought at any country store for a very low figure. Another plan is to cover with burlap or cotton cloth, and give this several coats of paint, to make waterproof.

J. E. Bennett.

Gouverneur, N. Y.

ROCK HILL LEGHORNS AT BOSTON.

At the late Boston show the Rock Hill Poultry Farm, of Ossining, N. Y., made almost a clean sweep on their S. C. White Leghorns, winning first and second cocks; first, second, third and fourth hens; third and fourth cockerels; first, second and fourth pullets and first and third pens, and nearly all specials. This was one of the strongest classes

BROOD AND NURSERY YARDS ON THE KELLERSTRASS FARM. KANSAS CITY, MO.

long and then cutting a groove through them large enough to allow a quarter-inch bolt to slide up and down the groove. These bolts can be obtained with wing or thumb nuts and when such bolts are used the frame can be readily adjusted to any desired height. Place a good, liberal bedding of straw or other good litter in the coop; this will help keep the chicks comfortable. Fight lice all the time. The brooder chicks sometimes contract lice from the hens which are running at large. For head lice, put a drop of sweet oil or melted lard on the head of each chick. You probably won't be able to discover these lice and will conclude your chicks are free from them. You better put the grease on their heads and if lice are there they will be destroyed, if not the chicks will not be injured in any way. It is much better to take no chances.

Don't place very young chicks out doors in a brooder and give them the liberty of the fields. They will get too far away from the brooder and become lost. Keep them confined inside the

wheat, cracked corn and wheat screenings. A mash of ground oats, cornmeal, and wheat middlings, mixed in equal parts, can be added to the rations. When chicks have reached the age of six to eight weeks they will readily consume the same grade of food as grown fowls, and this system will largely reduce the trouble and expense of feeding a flock of chickens. Before closing I wish to emphasize the benefits of the open air in chicken raising. In all the years I have been interested in the chicken raising business I have known but very few who were able to raise chicks in profitable numbers when the chicks were confined wholly indoors and reared in artificial brooders. The type of brooder has nothing to do with the trouble; the troubles of all the defunct broiler raisers was lack of outdoor air and sunshine. These are two elements which no brooder can manufacture.

True sunshine can be obtained under glass windows, but the invigorating outdoor air is then cut off. Repeating again, keep the chicks in small flocks un-

til maturity. Large numbers running together will kill chicks as surely as the plague. Make the roofs of all coops and brooders absolutely water tight. If they leak, cover with heavy tar roofing paper, which can be bought at any country store for a very low figure. Another plan is to cover with burlap or cotton cloth, and give this several coats of paint, to make waterproof.

Mr. F. W. Corey, the manager of this farm, is one of the best-known poultrymen in the United States, and has given years of his time to the study of how to produce the best, and his winnings during the past three years at all the leading shows is evidence that he has succeeded to a remarkable degree.

This farm is not devoted to one breed alone; but to several of them, which include White and Silver Penciled Plymouth Rocks, White Leghorns, White, Columbian and Partridge Wyandottes and Buff Cochin Bantams, and only the best of each variety.

There is probably no poultry farm in this country that is better equipped to fill orders for eggs and stock than the Rock Hill Poultry Farm, Ossining, N. Y., and they are prepared to ship any distance and guarantee safe arrival.

They have issued a very handsome

catalogue which they are desirous of placing in the hands of our readers, and we request that you write for a copy today and mention American Poultry Journal.

A CORRECTION.

In our February issue appeared a full page illustration of a trio of White Wyandottes under which was the line, "Rose Comb White Orpingtons." This was placed there by mistake. Of course, the great majority of our readers know that Charles V. Keeler, Winamac, Ind., breeds only White Wyandottes, but for the benefit of the few who do not we call attention to our error.

WHY THE SINGLE-COMB BUFF LEGHORN IS THE BEST GENERAL PURPOSE FOWL.

Single-Comb Buff Leghorn breeders base their claims for the superiority of the breed on the fact that they are the

but i will bet seventy-five thousand dollars that it never hapened in reel life."

Most certainly it did not, but some of the actual records made by Buff Leghorns in the matter of egg production would be subject to almost as much doubt unless they were well authenticated. One breeder who kept careful record reports an average of 232 eggs per hen per year and an average of 20.01 per hen for the month of January with the mercury at times down to 20 degrees below zero. Another reports that 13 pullets hatched in June, 1906, had, by July, 1907, laid 1,247 eggs, or an average of 96 per pullet. This was in a yard 10x30 feet and a coop 7x8 feet. These eggs were sold for \$160, or about \$2 per set. Another has 42 birds which have averaged 39 eggs per day from January 1 to September 1, and still another reports that 9 Buff Leghorns averaged four eggs per day during the moulting season.

Some of these egg-laying records were made in competition with other breeds

WINNER OF FIRST PRIZE. NEW YORK, 1908-'09.
BRED AND OWNED BY D.W. YOUNG, MONROE, N.Y., U.S.A.

heaviest laying, fastest growing, lightest eating, hardiest and richest in color of all breeds. For every one of these claims there is ample foundation in actual experience as well as in the history of the breed's development.

To either the breeder or the egg farmer the number of eggs laid per hen is of primary interest. And here I think I may be pardoned for introducing an apt quotation. Josh Billings, in an intensely funny "essa" on the hen, wrote:

"The pote sez butifully—
'Sumboddy stole my old blew hen
I wish they let her bee
She used to lay
Tew eggs a day
And Sunday she'd lay three.'

Now that sounds all rite for potery,

and were watched and recorded by men who were unprejudiced and only seeking to find the best general purpose breed for their own raising. In one case the other breeds tried were White Leghorns, Rose-Comb Brown Leghorns, White Wyandottes, Cochins, Barred Plymouth Rocks and Langshans. Of these the first three named, under exactly the same conditions, averaged just one-half as many eggs as the Single-Comb Buff Leghorns and the number of eggs laid by the other breeds was even less than half. In addition to quantity, Buff Leghorn eggs are high in fertility. Many breeders say that 95 per cent hatch out successfully. So it can be very plainly seen that, in point of egg production at least, and especially in cold weather, when eggs are high in

price, the Single-Comb Buff Leghorn is far ahead of all other breeds. The eggs are a beautiful pure white, full size, weighing from 2 to 3 ounces and with rich, solid fine-flavored meat. Besides their excellent habit of keeping busy laying in cold weather, when other hens are on a strike, the Buffs will lay well until six years of age.

It is the experience of most Buff Leghorn breeders that, with ordinary care, only about 2 per cent are lost in brooding. And many fanciers, who have only a few birds, claim that, with special care, in nearly all cases, not one need be lost. One cause for this is that, owing to their quick development, they are very early able to take care of themselves and fly up on the roosts away from the reach of rats and vermin. But the principal reason is that the Buff is naturally one of the most hardy of all domestic fowls because though the Leghorn species is supposed to have originated in Italy, the Single-Comb Buff Leghorn breed is a later product of Denmark, which is a far more trying climate than our own. Transplanted to England and America, the breed still maintains its native hardiness, resisting the effects of cold and the attacks of disease with extraordinary vigor. Their liveliness and constant activity give them plenty of exercise. They mature very quickly. Some of the finest chickens shown at the mid-winter exhibition were hatched after June 15. Pullets lay at four months and have been known to lay at a trifle over three months, and the eggs are marketable from the very start. Cockerels can be depended upon to produce 1½ to 2 pounds in six to eight weeks and there is no more delicately flavored and delicious dish than a broiled Buff cockerel at this age. The meat is firm, fine flavored, juicy, sweet and tender.

The Single-Comb Buff Leghorns are less subject to the common chicken diseases than any other breed. In the first place they stand confinement well. Even when cooped up in very small space their active nature seems to insure their getting enough exercise; but, further than this, they do not seem to contract any disease readily, even where there is contagion near at hand. In one case, roup developed in a pen of Barred Plymouth Rocks and while another breed, in the pen to one side of the Rocks, contracted it almost immediately, the Buffs, in the pen on the other side, did not contract it at all. They seem to have a faculty for taking care of themselves as well as earning their own "keep" as no other breed can. And when, as will sometimes happen to the best, diseases do break out, they throw them off in the shortest possible time.

Feed, fuel and quarters are the principal items of expense in the raising of chickens. Buff Leghorns require a smaller expenditure in all three of these items than any other breed. In the first place they do not require large quarters, their natural activity insuring their getting exercise enough in very contracted coops and thriving as well as another breed would in much more space. Their houses do not have to be kept very warm. They are naturally hardy and active and so they keep moving and keep warm. In certain sections of the country, where the cost of fuel is high, this is a very important item, especially where a large number of chickens are kept.

The actual food that it is necessary to give the Buff Leghorns, is from ½ to ⅓ less than other breeds require. They are so healthy that they seem to assimilate everything that they eat and to extract from it every atom of its food value. Besides this, they are great foragers, and if there is any natural food to be had, they will get it even if it requires a good deal of hustling. This is just another advantageous result of their natural activity. It keeps them always busy earning their living by laying eggs, hustling for food or keeping themselves healthy through abundant exercise. In one instance where careful record was kept of food consumed by a number of different breeds, Buff Leghorns consumed 4½ ounces per day, Barred Plymouth Rocks and Wyandottes 8½ ounces per day, Langshans 10 ounces per day and Cochins 18 ounces per day. So it can be plainly seen that the Buffs will thrive on less than half

Large Breed.

11,500 eggs at 18c per doz.	\$172.50
350 lbs. chicken at 10c per lb.	35.00—\$207.50
Balance in favor of the Buffs	\$172.50

This does not tell the whole story, however. It does not show the difference in the care necessary, in trouble from disease, higher value of eggs when sold for setting, and many other things in which the Buffs are far superior to any other breed. It does not tell, either, that the 3½-pound fowls are much easier to sell than those weighing 7 pounds or more. Experienced marketers say that only about 8 per cent of the demand is for birds weighing over 4 pounds, and that 50 per cent of that demand can be satisfied with two or more of a smaller bird. Thus it may be seen that in reality about 4 per cent of

the food that larger fowls consume. Farmers often figure that the large fowl is best for their purposes, as it weighs more when shipped to the market, and that is, of course, true; but the Buffs more than make it up in economy of food and in egg production. Suppose, for example, that a farmer has 100 Buffs and 50 of a larger kind, and that the large breed are as good layers as the Buffs (which they are not, as a matter of fact). Now the 50 large fowls require more food than the 100 Buffs, but for the sake of being conservative, we will assume that they can thrive on the same amount. After the chickens had been sold, the farmer could figure about as follows:

Buffs.	
23,000 eggs at 18c per doz.	\$345.00
350 lbs. chicken at 10c per lb.	35.00—\$380.00

the demand cannot be satisfied with Buffs. The result of this is that the owner of the large birds waits till the very last and finally is compelled to close out his birds at a sacrifice or take them home with him. On the other hand the Buff Leghorns being the ideal weight for easy selling, find ready buyers at good prices—the top prices always. There is never any closing out at a sacrifice.

Getting away from the purely commercial point of view, let us consider Buff Leghorns as a breed to attract the fancier, the man who likes to have handsome aristocratic fowls on his place and to take prizes at exhibitions. The Single-Comb Buff Leghorn meets the demand of both fancy and utility. It is a most beautiful bird and is in addition a fowl of today. It is not an old breed that long ago reached its highest development and is perhaps on the down-

grade, but one that is just coming into the full beauty of perfection. It is safe to say that inside of twenty years the very highest development will have been reached and we will have the perfect Single-Comb Buff Leghorn and the one perfect fowl. Is not that the period of greatest interest from the fancier's standpoint? Every year an improvement can be seen, every year new beauties develop and new points of excellence are revealed. Even now Buff Leghorns are the main show at exhibitions and when one considers that, aside from their excellence as a show bird, they have so many points of merit that cannot appear in the exhibition, but which save and make money for their owners, it is hard to deny that they really are the one ideal general purpose fowl.

Then the fact that they thrive well in all climates within the temperate zone is of great importance. Buffs have been raised in Kansas that took firsts at the World's Fair and prize-winners have come from states in almost every section of this country and Canada. California, the South, the Central States, the Dakotas, the Eastern States all are now the homes of many successful Buff Leghorn breeders, both those who raise the birds for exhibition and those who merely sell the eggs and meat.

I have never heard of a case where a breeder, taking up Buffs, abandoned them for any other breed. They seem to combine all the good points that a chicken should have, only one or two of which are found in any other one breed. They are splendid business birds, heavy layers, quick developers, light eaters and very healthy.

Truly with all these qualities it is no exaggeration to say that they are the best general purpose fowl on earth.

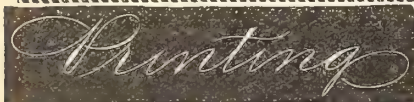

Racine, Wis. F. H. Tecktonius.

FRESH EGGS—SIXTY CENTS PER DOZEN.

When strictly fresh eggs are selling at 50 to 60 cents a dozen, then the poultry keeper is reaping his reward for breeding for the winter laying qualities of his fowls. A good winter laying strain of fowls will make more profit in egg production during the winter months than all of the remaining months of the year combined; and it costs but a trifle more to feed laying hens than it does to feed hens that will

not lay until spring opens, when eggs are low in price.

The time is near at hand when more attention will be given to breeding for winter laying qualities of our fowls and as my business for the past nine years has been exclusively egg production and developing a heavy winter laying strain of fowls, I feel that I can, as many writers in poultry journals do, give some good advice to the beginner.

Nine-tenths of those who write to me for eggs for hatching from my winter layers say they want hens that will lay plenty of eggs—and not show birds—from which I infer that the great majority of the people who keep fowls want winter layers. It follows that if they have good winter layers they will certainly have good summer layers.

S. C. W. LEGHORN

First S. C. W. Leghorn hen, Chicago, December, 1908. Owned by Robert D. Parmenter, Knoxville, Ill.

Therefore, I say to the beginner, the profit for the majority of poultry keepers lies along the line of egg production from a strain of fowls that will lay well during the winter months when prices rule high, and not along the line of breeding for feather or show birds. Secure a good winter laying strain of fowls and continue to breed from the best winter layers at all times. When you have a hen that will lay a large number of eggs each month during the winter, breed from her at least three years, always mating with a male bred in line from as good layer; and when you secure a good natural winter laying strain, do not imagine this is all there is to it, but learn how to house, feed and care for them to secure the results you are after. You can learn how to do this through the poultry journals, as by reading them you will profit by the experience of the best poultry men in the country.

Now a word as to comb. Do not imagine that a rose comb fowl is a better winter layer than a single comb under the supposition that a single comb is more easily frosted, for such is not the case. The rose comb fowl will not lay

under conditions cold enough to frost the single comb, and my experience has been that as a rule all single comb varieties are the best layers. In breeding for rose combs often all other qualities are lost sight of but the comb.

J. B. Barnard.

Garrettsville, Ohio.

THE WHITE MINORCA.

The White Minorca has been called the aristocratic breed, and rightly so, because of their grace and beauty. One who admires them and gives them close attention would think they were always on dress parade. I can conceive of no prettier sight in poultrydom than a flock of well-bred and well-kept single-comb White Minoreas, with their pure white plumage, their bright, intelligent-looking eyes, red face and wattles—white earlobes and large red combs, their long, sloping back with magnificent tail, the admiration of nearly every visitor to the yards or the show room and no less practical for their abundant supply of very large white eggs. And here is where their real value lies—in the practical side of this variety. The Minorca (either white or black) is the largest fowl in the Mediterranean class. They grow to broiler size as quickly as the heavier breed and a point to their advantage when they arrive at the age of eight weeks there is no trouble about distinguishing between the pullets and cockerels, and those who wish can dispose of the cockerels at the most profitable age. This is not the case with the heavier breeds. There may be specialty breeders who can make the separation at a very early age, but this does not apply to the average person. Some may ask Why the White Minorca? Well, largely a matter of choice only, no real difference except that with the white birds there are no black pin feathers nor black skin. The pullets commence laying at an early age and keep right at it until they are four or five years of age. They maintain their strength and beauty until they are remarkably old. I had a hen that scored 95 at three years of age, and she maintained her vigor and kept on laying until she was five. No doubt there are other instances that may even surpass this, but it goes to show that they are a practical, all-around good breed and worthy the attention of those who love beauty and utility combined.

George C. Pennington.

Waverly, Neb.

The chicks' drinking fountain should be carefully washed. Bowel trouble often originates from the practice of giving milk and water from the same fountain on the theory that all the chickens want is a drink. Milk is never a substitute for water.

Fowls seem exceedingly grateful for the gift of cold water. They never swallow a drop of it without turning up their eyes to heaven.

ORPINGTONS

to serve your interests. Kindly name quality wanted. Absolute satisfaction guaranteed.

C. S. BYERS,

Orpington Specialist and Judge,

Hazelrigg, Indiana

BUFF, BLACK, WHITE It is a fact that Byers' strain Orpingtons are represented among the winners and every western show of importance; that many of the most phenomenal records ever made on Orpingtons, up to the hour, have been made with Byers' Orpingtons. I am prepared to furnish you sensational show birds for the approaching show season, and hundreds of them. No breeder in the States, large or small, is in better shape

BREEDING MODERN BARRED PLYMOUTH ROCKS.

It should be the determination of every fancier of the Barred Rock to breed a better bird from year to year. The trend of the past has been towards quantity, from which to select quality. It has ever been said that one must raise a lot of birds to get a few of the highest class. There may have been something in this for the man who did not give the breeding of high quality specimens his earnest thought and attention. Today and yesterday are separate and apart when it comes to good Barred Rocks. The old-fashioned pullet, with her wide bars and as wide ground color between them, has been sent to the rear and the modern female, with the clean-cut bar and the distinct ground color on which the bar is placed, has come down to us as the thing most desirable and beautiful. Some breeders have been buying cockerels with this good exhibition pullet blood in them and mating to their females of the old style, with but very little success, let me add. I have handled more poor Barred Rocks in the show-room, that have been bred from a direct crossing of strains of blood than from all other methods put together. Good birds must be bred, bred from the right kind of stock.

One of the faults of the widely barred and open female of the past was the washed-out cockerels that accompanied her. It was common talk some years ago that to breed a good female you had to use a male that was nearly white in his surface color and one that did not have any barring at all. The latter's barring could be anything that looked like smut. The modern pullet is the result of breeding a better male, some attention being paid to his barring and depth of barring. Today we who are working towards the highest class of pullets do not think of using a male that is not barred well and regularly on the surface, and deeply. To build up a strain of pullets that are right in color and other exhibition requirements means first that you must have a female that is bred the way you want her to produce pullets. Then she must be mated to a male that is not too far removed from her in blood lines, so that the mating will not be a cold one, or, in other words, a direct outcross. But let it be remembered that the shortest and surest cut to the modern pullet is to get a female of the type wanted and then be careful and rigid in future selections from the offspring.

The breeding of exhibition males has been more of a study with some fanciers than has the production of pullets. It is considered greater honor to capture first cockerel than any other single class prize. The first pen is the prize that proves the breeder's skill. Cockerel matings are generally made up of any number of dark females and an exhibition cockerel. Some good birds are produced this way. The mating that I have found to be most successful is that of a cleanly barred cockerel, exceptionally well barred in wings, tail, back and fluff, breast feathers ending in a bar, if possible, comb straight and free from thumb-marks, or too many serrations, bay eye, deep orange legs and yellow beak—his general color being a shade darker than exhibition color—such a male mated to a female very narrowly barred and good in legs and beak and wings and tail. Let her be well barred and deeply in back and body, comb small and straight and

even in shape, her type being a bit more full than what the Standard calls for. She should have something of a cushion and stand squarely. Her general color must be bright and clean, her back not appearing smoky or dull in its barring. You should see the barring in her back as you are standing over her at feeding time. If she is too dark the cockerels will come with legs bad and some smoke on wings. By pedigree breeding you will soon see just what type of female comes with this sort of a male as I have described. The best female to mate in cockerel matings as in pullet matings is that one gently bearing blood of the male with which she has been penned. Using two or three shades of color in your cockerel-bred hens or pullets will soon tell you whether you are mating too dark or too light with your females. Breed from a few select birds rather than from a dozen that are ordinary. Get started right and then stay right. A few dollars in the beginning will save a lot of humiliation in the show-room, and much money later.

After the breeder has done all he can in the way of mating, he must then see to it that the numbers of chicks he raises are not too many for the space or range he has at hand. There is as much in the breeding after the chick is out of the shell as there is in the mating itself. Care is a part of the finishing process that cannot be done other than by personal work.

Editor American Poultry Journal.

Dear Sir:—I do not agree with Mr. A. W. Fowler of Hudson, Mass., in his article published in your January number on "The Hen's Food." First, freshly-laid eggs do not carry germs. Second, it is absurd to say that poultry should be fed as people are.

If fresh eggs carry germs, why do physicians prescribe them for their patients? Or why is it said that one egg is worth a pound of meat? If they are disease-giving it is very safe to say that physicians would hesitate about prescribing them, for we all know that consumptives and all in poor health are obliged to eat them raw, as well as cooked. Cooking is detrimental to all germs; if there be any germs in an egg (and I am positive there are not) they would thus be destroyed, for the majority of eggs used are cooked in some form or other.

Two cases of serious illness—one of scarlet fever, another of drowsy—were in the immediate family of the author. In each case the attending physician prescribed raw eggs. If the eggs contained germs, what a fatal mistake he must have made. But evidently not.

Mr. Fowler tells us that hens fed ham one day laid eggs the next day which had a ham flavor. Common sense tells us that those same eggs must have been too far developed the day the hens were fed the ham to be in any way whatsoever affected by the ham. Eggs do not carry any flavor, but like everything else in nature have a flavor of their own. If what a hen is fed flavors her eggs, is it advisable to advertise in the pages of this journal Darling's beef scraps sold at the exorbitant price of \$2.75 a hundred pounds to have eggs flavored with beef? If such is the case, would poultry men visit the butcher shops and purchase the scraps of beef, fish, veal, pork, mutton and bones and even gristle, then buy a bone cutter to properly cut the miscellaneous mess and afterward feed it to the chickens? What kind of a flavor would those eggs

have; one of beef, fish, mutton, or probably it would be "scrambled." It has been stated that swill fed to the hen is returned to us when we eat cake or custard made from their eggs. If such is the case, that the swill affects the eggs and constantly anything made with those eggs, it is equally true that the cake or custard would affect us and in the light of common sense judgment we would become sick if not seriously ill.

Furthermore, the article states that hens are to be fed only what a man is willing to put into his own mouth. Is any man willing to eat bone scraps or meat scraps? Yet they are advertised and highly indorsed by the best of poultrymen as being the best kind of food for chickens—especially adapted to produce good layers. Surely poultrymen of long experience know what is best for hens, and nowhere have I seen advertised such food for them as we daily eat.

F. Werkins, Jr.

Freeport, Ill.

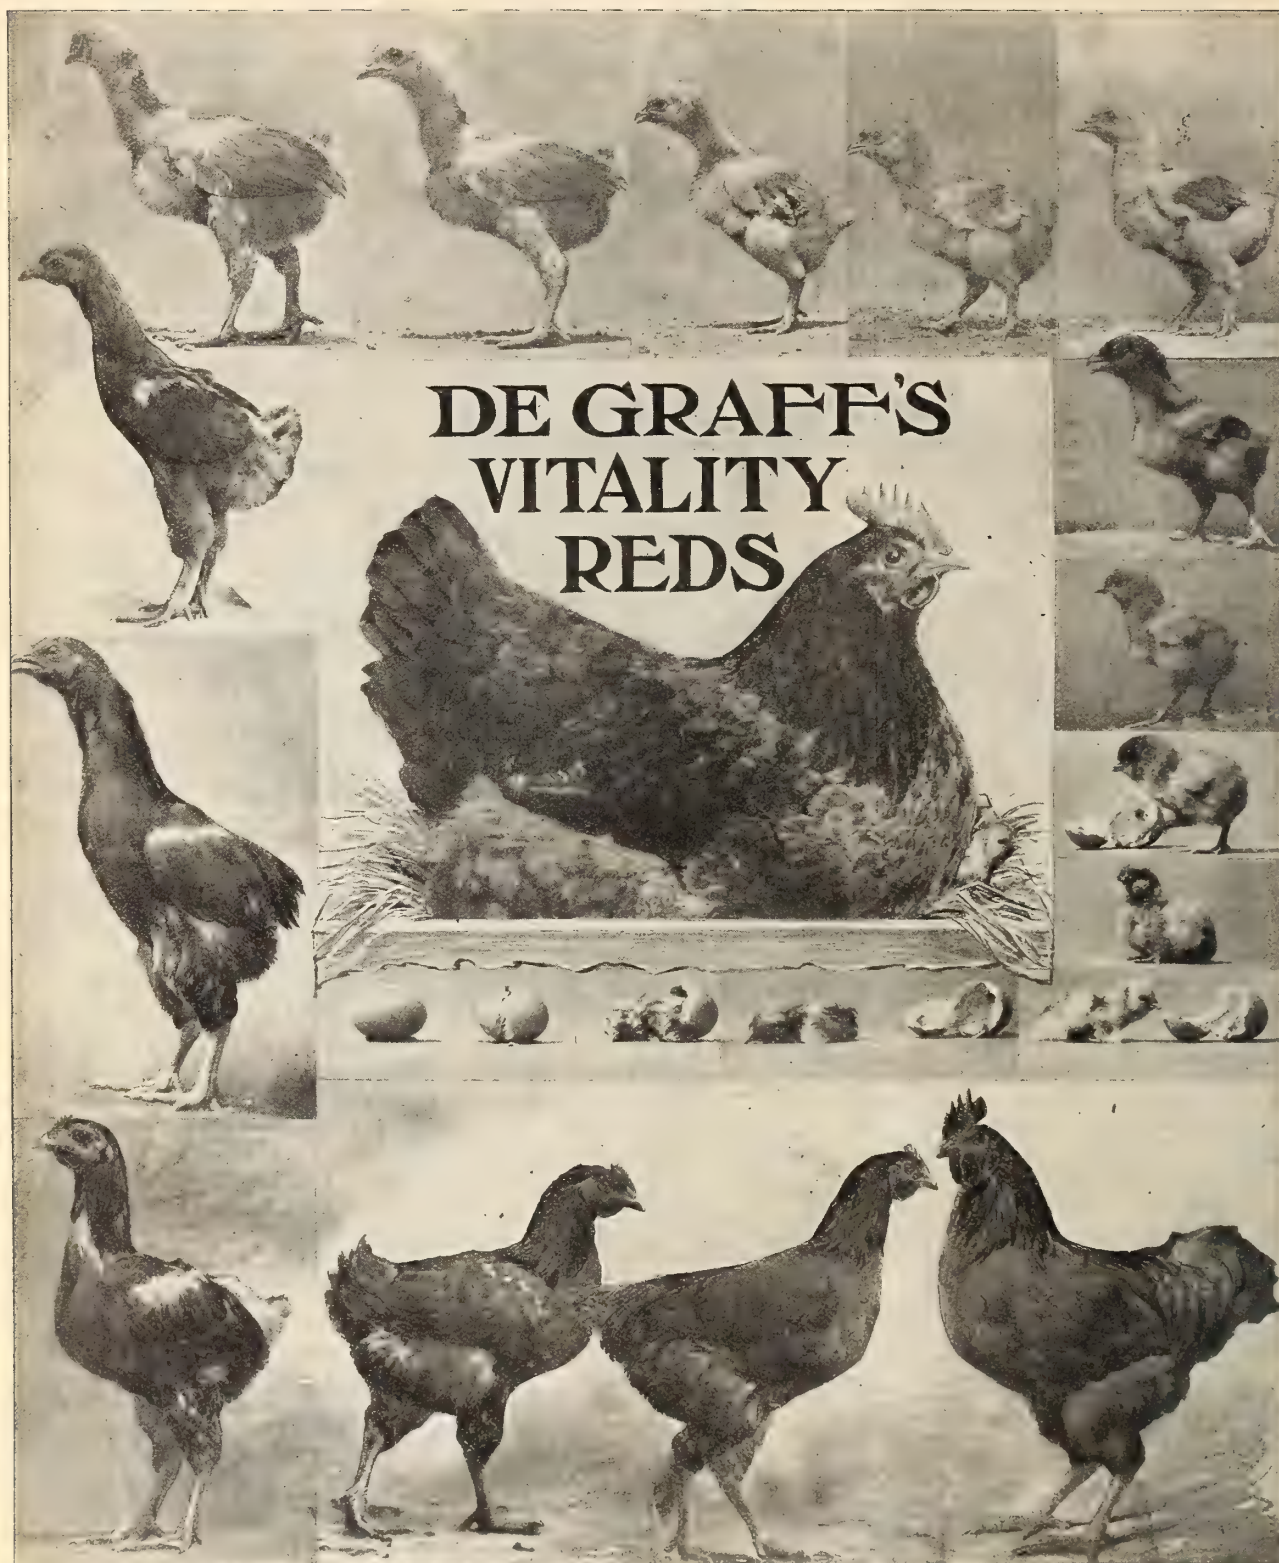

FOREMOST AMERICAN FANCIERS AND LARGE PRACTICAL PLANTS

In Which It Is Told That The Bigger The Hatches Are, The Bigger The Profits Will Be.

Anybody interested in the men who are foremost in breeding fancy poultry and winning with them, and anybody who wishes to be introduced to those equally prominent poultry raisers—the proprietors of Large Practical Poultry and Duck Plants, cannot do better than secure Cyphers Incubator Company's Big Illustrated Catalogue for 1909. Two hundred and twelve pages; over five hundred world-wide photographic illustrations of prominent poultrymen, poultry plants, and poultry equipment, with instructive chapters intermixed, make up a book exemplifying the importance of the poultry industry, which, we are proud to say, is unequalled in this or any other country. Poultrymen and women who have been in the business year after year—the old stand-bys, anticipate its annual coming. For twelve years it has been welcomed as a veritable encyclopedia of the poultry business, and as one glances through it anew, expecting to be entertained, it once more creates surprise at its completeness and the ever widening circle of the Company's operations.

What else is in it? Well! To begin in the middle there are some instructions headed "Get Bigger Hatches," followed by a truism—"The Bigger the Hatches, the Bigger the Profits." A few pages slip through our fingers and we see a string of medals and silver cups and a little talk about "Winners Throughout America." It is accompanied by pictures of a number of the winners, and includes reference to the New York, Boston, Chicago and other big shows. Did you ever see Duston, Fishel, Russell, the veteran "Billy" McNeil, E. B. Thompson, Hawkins—yes, and there are photographs of others as well known, all looking happy, successful and—yes, masterful. Did you ever see thousands and thousands of ducks in a flock? They're in it. Not only one flock, nor two, but dozens; fowls too—not such big flocks, but just as numerous.

It would take too much space here to tell of Cyphers Company's Kansas City Food Mill, their Electric Hatchers and Mammoth 40,000 Egg Incubators. Get the book and see for yourself. See also the long list of Poultry Supplies the Company manufactures; their "Warrant of Superiority" occupying a page, and their straight "Guaranty" another. It will impress upon you the immensity of the Poultry Industry, the solidity of Cyphers Incubator Company with its 500 or more employees; its five acres of factory floor space; its seven branches and warehouses, and lastly but by no means least, the fact that for over twelve years their Incubators and Brooders have been the acknowledged leaders everywhere. Why not write now for this Big Free Book. You can get it if you mention the name of this paper and address CYPHERS INCUBATOR COMPANY, Buffalo, N. Y.; Boston, Mass.; New York City; Chicago, Ill.; Kansas City, Mo. or Oakland, Cal.

This composite group is the work of Edward T. De Graff, who took all the photographs and designed the group so as to show the wonderful vitality of the Rhode Island Red chicks as grown on the De Graff Poultry Farm, Amsterdam, N. Y.; and it is certainly a convincing demonstration well executed. Judge De Graff made a scientific study of raising young chicks last spring after leaving the bank, and his "Book on Reds" gives many facts pertaining to same that every poultry raiser should know, besides being the highest grade printing that money can buy, and really a credit to the poultry industry in general.

DeGraff's Vitality Reds to the Front

Try my strong germ, Pneumatic protected Red Eggs that hatch vigorous, never-die, hardy Red chicks

MATING LIST FREE

SINGLE COMB REDS

I am satisfied, I can truthfully say that I saw more good Rhode Island Reds in one bunch than I ever saw in my life, and the fact of such a large number of birds to see them all so uniform in color and so healthy makes me say that my visit to your plant was the most interesting that I ever enjoyed in my life in this business. Certainly too much can not be said of the number of your birds you have, and the quality of them, and what is more the health which every bird appeared to be in. You are certainly deserving of all that is coming to you. Yours very truly—F. W. DeLancey, Editor Poultry Item.

ROSE COMB REDS

I visited the DeGraff Poultry Farm, where I inspected many hundred fine Reds which were a surprise to me for the high average quality of both breeds. I found his 1909 breeding pens comprised an extra fine lot of yearling hens, and large fully developed pullets, and as mated they would be hard to duplicate for good results in breeding. I saw at least twenty-five Red males that would average better than any string of males I have ever seen in any show room and should make the best of breeders, as they are the same even shade of rich red all over that we are looking for.—A. C. Chapin, Springfield, Mass.

...Prize Record Unequalled...

Read editorials about it. Three colored pictures by three different processes of art printing. Embossed Red Cock Trio, R. C. Red by direct photography process. Only one ever taken of fowls on earth. Highest grade printing possible to produce and a work of art you can't afford to be without, 25 cents.

THE PHILO SYSTEM

IS ESPECIALLY VALUABLE TO THE FARMER AS WELL AS THE CITY OR VILLAGE FANCIER AND IS ADAPTED TO ALL CLIMATES, ALL THE BREEDS AND PEOPLE

The Philo System is Unlike all other Ways of Keeping Poultry

and in many respects it is just the reverse, accomplishing things in poultry work that have always been considered impossible and getting unheard of results that are hard to believe without seeing. However, the facts remain the same and we can prove to you every word of the above statement.

The New System Covers All Branches of the Work Necessary for Success

From selecting the breeders to marketing the product. It tells how to get eggs that will hatch, how to hatch nearly every egg, and how to raise nearly all the chicks hatched. It gives complete plans in detail how to make everything necessary to run the business and at less than half the cost required to handle the poultry business in any other manner. There is nothing complicated about the work and any man, woman or child that can handle a saw and hammer can do the work.

Two Pound Broilers in Eight Weeks

are raised in a space of less than a square foot to the broiler without any loss and the broilers are of the very best quality, bringing, here, three cents per pound above the highest market price.

Our Six-Month-Old Pullets Are Laying at the Rate of 24 Eggs Each Per Month

in a space of two square feet for each bird. No green cut bone or meat of any description is fed, and the food is inexpensive as compared with food others are using.

Our new book, **THE PHILO SYSTEM OF PROGRESSIVE POULTRY KEEPING**, gives full particulars regarding these wonderful discoveries, with simple, easy-to-understand directions that are right to the point, and fifteen pages of illustrations showing all branches of the work from start to finish. It also tells how to make a brooder for twenty-five cents that will automatically keep all lice off the chickens or kill any that may be on them when in the brooders.

Our New Brooder Saves Two Cents on Each Chicken No lamp is required. No danger of chilling, overheating or burning up the chickens as with the brooders using lamps or any kind of fire. They also keep all lice off the chickens automatically, or kill any that may be on them when placed in the brooder. Our book gives full plans and the right to make and use them. One can be easily made in an hour at a cost of from 25 to 50 cents.

A Few Testimonials

It was my privilege to spend a week in Elmira during August, during which time I saw the practical working of the Philo System of Keeping Poultry and was surprised at the result accomplished in a small corner of a city yard. Seeing is believing, they say, and if I had not seen, it would have been hard to believe that such results could have followed so small an outlay of space, time and money.

P. S.—A year's observation, and some experience of my own, confirm me in what I wrote Sept. 5, 1907. The System has been

Valley Falls, N. Y., Sept. 5, 1907.

E. R. PHILO, Publisher - - - 14 Third Street, Elmira, N. Y.

tried so long and by so many, that there can be no doubt as to its worth and adaptability. It is especially valuable to parties having but a small place for chickens; seven feet square is plenty for a flock of seven.

(Rev.) W. W. COX.

Ransomville, N. Y., Dec. 5, 1908.

Dear Sir:—Last spring we purchased your book entitled the "Philo System," and used your heatless brooders last spring and summer. The same has been a great help to us in raising the chicks in the health and mortality, the chicks being stronger and healthier than those raised in the brooders with supplied heat. We believe this brooder is the best thing out yet for raising chicks successfully. We put 25,000 chicks through your heatless brooders this last season and expect to use it more completely this coming season. We have had some of the most noted poultrymen from all over the U. S. here, also a large amount of visitors who came daily to our plant, and without any exception they pronounce our stock the finest and healthiest they have seen anywhere this year.

Respectfully yours,

W. R. CURTISS & COMPANY.

Are They Worth Saving? Don't Let the Chicks Die in the Shell

One of our secrets of success is to save all the chickens that are fully developed at hatching time, whether they can crack the shell or not. It is a simple trick, and believed to be the secret of the Ancient Egyptians and Chinese which enabled them to sell the chicks at 10 cents a dozen. It takes but a minute to save a chick and no skill required.

Note What Others Say of This "Trick of the Trade"

Dear Sir:—Some time ago I got the Philo System and must say it is the best book I ever read on Poultry. I have tried the "Trick of the Trade" and saved twenty-two chickens which otherwise would have died.

Ringwood, Ont., Can., May 6, 1908.

Yours truly,

ROY MOYER.

Dear Sir:—Your book safely to hand, and have derived great benefit from it, especially "A Trick of the Trade."

Respectfully yours,

G. H. STANFORTH.

Potomac, Md., May, 1908.

Dear Sir:—I am using your System of Progressive Poultry Keeping and consider it the best work on Poultry Raising I ever read. In my last hatch I saved twenty-three chickens by following the article, "A Trick of the Trade."

Yours truly,

FRED JANISON.

The Lakewood Farm Way

¶ The modern idea in business is Specialization; it is not enough to call a man a specialist for keeping only one breed, he must specialize his breeding, feeding, rearing and marketing of that specialized breed.

¶ A hen is no greater or better than the man back of her.

¶ If you breed in a practical, commonsense way for the production of eggs and poultry, WITH YOUR STRAIN ESTABLISHED the results that you will obtain will be an investment sure to be cumulative and profitable.

¶ So thoroughly are we convinced of the soundness of our breeding methods that we court every possible comparison.

¶ In full possession of the facts, we state without hesitation that no other establishment offers to the prospective purchaser of Eggs or Baby Chicks so large and so distinctive an assemblage of the Single Comb White Leghorn Fowl, as we now have in our breeding yards at Lakewood Farm.

¶ If you are in doubt write for our book "Poultry Profit Pointers" and make the "good start" with

Baby Chicks or Hatching Eggs

White Ply. Rocks

BLUE RIBBON WINNERS—At the great Wabash Valley Poultry and Pet Stock Association Show, Huntington, Indiana, January, 1909, in a hot class of 80 White Rocks I won 2d cock; 1st and 2d hen; 2d, 3d and 4th cockerel; 1st and 2d pullet and 1st pen. Special for best White Rock in show. At Delphi Fanciers' Association show I won all firsts and seconds, silver cup for best display in show. Special prize for two best Plymouth Rocks in show. My White Rocks have been line bred for ten years. Write for illustrated circular. Some fine cockerels for sale. Eggs from choice matings \$3.00 per fifteen. **J. H. TROBAUGH, Delphi, Indiana.**

THE BEST FOWL S. C. BUFF ORPINGTONS

The business fowl of the 20th century. Why? Because they begin to lay earlier, lay more eggs in winter, and mature quicker than any fowl in existence. The 1909 catalogue of the National S. C. Buff Orpington Club tells why they are so popular and everyone discards other breeds for them. Contains over 100 pages, fully illustrated; also large size ideal cuts of these money-making fowls that have caused so much comment throughout the entire poultry world. Everyone interested in poultry should have a copy. Price only 10c while they last. **WILL H. SCHADT, Sec'y, Goshen, Indiana.**

Welch's Partridge Wyandottes

Bred to pay and to win, the two in one. We offer a limited number of settings of eggs from our special mating headed by the first prize cock at Edon, Ohio, January, 1909, scoring 93, mated with females his equal, scoring from 92 to 92½. (Have official score card to show.) Eggs from this pen \$3.00 for 15, \$5.00 for 30. I breed for quality and quantity. Unsatisfactory hatches replaced at half price. A fair deal or your money back. Fertility guaranteed. Stock all sold.
